57th year—$40 per year, $1.00 per copy

Auto makers lose $1 billion in 3rd quarter

Red ink spurs basic changes at Big Three

By Edward Lapham
Financial Editor

The $1 billion in third-quarter after-tax losses posted by the auto makers reflects a continuing industrywide depression and indicates some fundamental changes for Detroit.

While the July-September period traditionally has been the weakest quarter of the year due to model changeover costs, the diverse introduction dates scattered throughout the year have tended to spread retooling costs as well.

In the third-quarter statement, the makers all cited continued weak worldwide auto markets, particularly in the U.S,. where recent Reagan Administration acknowledgements that there is a recession means the auto depression has spread through the economy.

One of the most significant aspects of the past quarter, analysts believe, was the larger-than-expected $468 million after-tax loss by General Motors, accompanied by a rundown in working capital to $367 million at Sept. 30, without an oversized depreciation and amortization tab.

In a late September report to clients, Maryann Keller, vice president and auto analyst for Paine Webber Mitchell Hutchins, Inc., wrote that GM's business plan seemed to be changing.

She said the two-seat P-car project was delayed and a program which would have downsized B- and C-body cars on a front-drive platform for '83 was changed to putting "B" nameplates on old A-Special rear-drive platforms while leaving the larger C-body cars unchanged.

"GM's new approach seems more like those Ford and Chrysler have been forced into by lack of funds," she wrote.

"When General Motors announced a $40 billion capital spending program more than 1½ years ago, a general perception took hold that it was only a matter of years before GM would buy its way out of its problems," Keller said. "The company's solution was to introduce a brand-new automobile in virtually every segment of the market.

"This rose-colored view of the future is obviously undergoing revision and a new reality seems to be emerging at GM," she said.

In an interview with Auto-

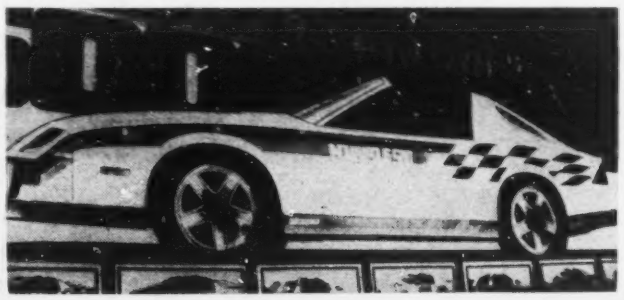
Camaro Pace Car



Off the wall

Here's a concept sketch of the 1982 Camaro pace car that will lead the pack to start next year's Indianapolis 500 auto race. The rendering, on paper, was removed from the walls of Chevrolet's styling department in Warren, Mich., and brought to Indianapolis by Chevy General Manager Robert D. Lund, who displayed it at the Indy Speedway banquet hall, where he addressed the annual Sportsmen's Banquet, Oct. 19.

Further sales decline seen before any turnaround comes

By Jenny L. King
Staff Writer

A recent report from a prominent auto analyst said "bleak outlook for the fourth quarter."

A used-car wholesaler in the Detroit area suggested: "We need some excitement in the market, but we can't survive on it alone, and I think things are going to get much worse before they get better."

The 1982 model year is off to a very modest start. Domestic sales for the first two periods in October were down 31 percent from early 1981 model-year sales. They were closer to 1958 levels.

Long-range sales forecasts are optimistic, but few persons willing to look to the end of this calendar year can see anything but a continued slump.

"You'll have to admit things were quiet in October, they'll get even slower in November, and by December they'll be all but dead," said John Lund, of Lund Motors, used-car wholesale operation in Royal Oak, Mich. (if the occasional Rolls Royces, Porsches and Cords he also handles can be dubbed "used cars").

"As sure as the snow flies, sales go down the end of the year. But I think we will see a real resurgence the first of next year."

Lund lamented the logic-based approach to buying that characterizes today's market. He said he believes people would rather get emotional about their cars and if they could let themselves go they would start buying again.

Lund cited January introductions of the Chevrolet Camaro and Pontiac Firebird as sure stimulants of the market. People who have been postponing buying will come back the first of the year, he said.

Sam LaFata, owner of Aptco Auto Auction in Taylor, Mich., thought the lid will come off much sooner than January.

"The shut down we're witnessing now is only temporary. Sales will pick up before the end of the year—very soon, I think," said LaFata. He said the auction business is healthy now with the influx of 1981-model rental and lease cars generated

Health benefits cost Chrysler $300 a car

DETROIT. — Chrysler Corp. is paying health care benefits equivalent to $300 per car, according to a company official. The company is considering restructuring its health benefits.

The official also said Chrysler has a $6 per hour labor cost disadvantage with Japan. General Motors and Ford Motor Co. have said they have an $8 per hour difference with Japan and are planning to retrieve it from the UAW in 1982 negotiations. The two companies are also demanding changes in the benefits plans to lower expenses.

Chrysler's current labor cost stands at around $18 per hour, compared to the $20-21 per hour at GM and Ford. The lower cost is due to concessions given the ailing auto company.

Peck estimates savings of $75 to $100 per car

NHTSA scraps mandate for air bags or automatic belts

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The NHTSA has rescinded the passive-restraint mandate, which would have required air bags or automatic seat belts in standard and midsize cars in '83 and small cars in '84. The auto makers had planned to meet that rule by using detachable automatic belts.

Administrator Raymond A. Peck said installation of detachable automatic belts to meet the rule would likely mean that use of those belts would be no higher — or perhaps only marginally higher — than the current 11 percent usage rate for conventional seat belts.

In addition, NHTSA said consumer costs for the program would be between $75 and $100 per car, a projected total of $1 billion when all new cars had the passive systems installed. Increased fuel consumption caused by the extra weight of the passive system could cost another $150 million per year, NHTSA estimated.

Officials have said that striking the passive-restraint rule will allow the auto industry to re-allocate $400 million in capital investments.

The lower prices which would be tagged on non-passive-equipped cars will also act as a much-needed sales inducement, although Peck said that sales-increase estimates of 395,000 by General Motors and 235,000 by Ford Motor Co. may be "overstated."

• Peck said his decision might have been different if auto makers had planned a higher use of air bags. Peck said the auto makers had scheduled a 60 percent usage of air bags when the rule was originally put in place in 1977. Last spring, however, domestic makers scrubbed air-bag plans in favor of a 99 percent installation rate of detachable automatic seat belts.

He repeated that if an air-bagged car were available, he would buy one. (Peck owns a BMW. That company was seriously considering using air bags.)

Peck stressed he was not "killing the air bag," there is ample evidence that the air bag was already "killed" by the economy, high prices, uncertainty and delay. Of course, any auto maker wanting to use air bags or automatic belts may continue to do so, as an option, and Volkswagen of America promptly said it would continue to offer them on its Rabbit.

Peck also said he has urged auto makers to continue work

Lower impact speeds expected

New bumper standard due early next year

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A new bumper standard is expected from NHTSA early next year. That may allow enough time to catch the 1983 models but cost savings can begin very quickly.

The public hearing has been held. More written comments are expected. A public wrap-up is still scheduled for Nov. 12.

If impact test speeds are lowered to 2.5 MPH front and rear, from five MPH, the auto makers within a few weeks can drop the hydraulics behind the bumper face bars. That will bring a quick savings.

Further savings would be possible for '84 models, but the consumer might not keep money in the pocket — only see less of a price hike.

In September, the new NHTSA concluded the bumper standard — 5 MPH, front and rear, 3 MPH for corners and no damage except for shallow dimples — costs customers more than it saves. It fails to meet the criterion of the 1972 law of "maximum feasible reduction of costs."

NHTSA's proposal was to consider nine changes — combining lower test speeds — 2.5 MPH and even an unregulated bumper assessed at 1.5 MPH with degrees of damageability, one for the vehicle and the other for the vehicle plus bumper face bar.

The regulation, it was suggested, probably would keep the bumper height requirement, eliminating override and underride in parking maneuvers, as being cost beneficial. It would at least prevent damage to safety components on the ground the original idea was a safety standard, not merely the economic regulation it became after the 1972 law.

The assessment of costs and benefits, essential to this regulation, is very complex.

It is hard enough when dealing with damage that is reported and repaired. It is even worse when dealing with damage not reported and not repaired. There is little real-world low-speed accident experience, and insurance data is largely historical and incomplete. Further, early designs that were used to meet the regulation were unduly heavy and costly.

The question was whether to use cheap and heavy metal and incur more fuel penalty or to use more energy-consuming and expensive lighter, stronger metals or plastics. Although all the speeds are low-impact, the forces used to control 5 MPH are four times those needed for 2.5 MPH.

Dynamic convertible EXPosed

Dynamic Conversions, Inc., Hillsdale, Mich., has introduced convertible versions of the Ford EXP and Mercury LN7 two-seaters. An interior headliner is optional. The conversions will be sold through authorized dealers. Retail price for the droptop treatment is $5,000.

Can include imports and domestics in figure

VWoA granted exemption for combined CAFE

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — NHTSA has granted Volkswagen of America's petition for an exemption — effective for '82 models — from the requirements that domestic vehicles must comply with the average fuel economy standard separate from imported vehicles.

General Motors is the only company that objected to VWoA's petition. GM said such an exemption might provide VWoA with a competitive advantage by avoiding fines for its captives which might miss the CAFE.

Under the recently amended law, NHTSA must grant the petition unless it finds that such actien will mean fewer auto manufacturing jobs in the U. S. The decision means that VWoA will be able to count its less fuel-efficient Audis and Porsches along with its domestic-made Rabbits.

VWoA asked that the law be changed — as it was — because under the old law, it could not exceed 75 percent domestic content and still be able to count imports in determining compliance.

VWoA's domestic content for its U. S. Rabbits is now about 60 percent and over the next few years, it plans to exceed the 75 percent level of domestic content.

In signing the exemption, NHTSA head Raymond Peck said that looking solely at employment and assuming VWoA would not risk a civil penalty liability for its Audis and Porsches by exceeding the 75 percent level for Rabbits without an exemption, NHTSA thinks U. S. employment would increase by 10,000 to 15,000 jobs because of the exemption.

"With the requested exemption," Peck said, "VWoA might well increase the domestic content of its U. S. Rabbits by 10 to 15 percent (from the current level to slightly above the 75 percent statutory threshold), or the equivalent of about 40,000 to 60,000 complete vehicles produced with 100 percent U. S. labor and components.

"If, as VWoA has suggested, each automobile produced gen-

Air board order slapped on 5 more modifiers

California halts exotic-import sales

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The California Air Resources Board, in a sudden crackdown, has ordered five firms to stop selling within the state the new, exotic imports they modify to meet California emission standards.

Similar action can be expected against other California modifiers, CARB sources said.

The action effectively wipes out the biggest market for these new exotic imports — typically high-powered European autos — which the manufacturers do not export themselves to the U. S. and which are not certified by the makers to meet U. S. or California emission rules.

The action will prevent any modifier from selling in California a new vehicle that the manufacturer has not certified.

It raised an immediate firestorm of protest from the affected firms who argue that the action is unwarranted and contrary to federal law which permits such activity.

Cited by the CARB were Hollywood Sports Cars, Inc.; O'Gara Coach Co., of Beverly Hills; ACI, of Santa Monica; Prestige Porsche-Audi, Ltd., of Glendale, and Classic Motors, of Beverly Hills and Chicago.

CARB alleged the firms were offering for sale new vehicles that were not in compliance with state health and safety regulations.

Earlier this year, CARB cited Al Mardikian/Trend Import Sales, Inc., for a similar alleged violation. Mardikian denied any wrongdoing and has said he intends to challenge the order.

• California, more than any other state, is a booming market for exotic cars not otherwise available in the U. S.

It also has some very severe pollution problems and to combat them has enacted the most stringent tailpipe standards in the country.

Bringing certain exotic vehicles into compliance with those standards can be a very expensive proposition but also a lucrative one. As a consequence, the state is seeing an explosion of firms offering such services.

Concerned about that and the quality of the work being done, CARB decided to crack down. Its feeling is that no one but the manufacturer is capable of certifying that a new vehicle meets its standards. It does not like the idea of small shops offering new non-certified vehicles for sale with promises that they can be certified.

Only a manufacturer is qualified to certify that a vehicle will meet emission standards for the required 5 years and 50,000 miles, a CARB spokesman said.

If a manufacturer chooses not to bring certain vehicles here, it must be assumed it knows what it is doing, he said. Thus, the modifier of a non-certified vehicle still has a non-certified vehicle when he is finished as far as CARB is concerned, he said.

He added, though, that CARB is considering ways to allow modifiers to qualify as manufacturers. If they can do the full 50,000-mile certification procedures, offer the requisite warranties and get the OK from the manufacturer, CARB might reconsider its stance, he said.

Whether the car makers

Mid-October total is 149,472, down 27 pct. from 1980

New-car sales sink to 23-year low

By Jenny L. King
Staff Writer

Domestic new-car sales during mid-October were lowest for that period since the modest 82,470 total reported in 1958, and were less than one-half of the record 334,290 sales reported during Oct. 11-20 of 1971.

The domestic auto makers retailed 149,472 new cars in mid-October, down 26.90 percent from 204,466 a year earlier, and up just 1.43 percent from the first 10 days of October this year.

Interest ceilings, rebates and price specials offered by factories and dealers did not convince new-car buyers to purchase a 1981 or 1982 domestic model. It was the fourteenth of 29 sales periods to date in which sales were below 1980 levels.

Volkswagen of America was the only U. S. auto maker to enjoy a mid-month sales increase. VWoA dealers sold 4,031 Rabbit sedans, up 37.76 percent from 2,926.

• General Motors sales dropped 33.51 percent, to 90,232 from 135,700. Ford Motor Co. sales of 35,343 new cars were down 12.19 percent from 40,249. Chrysler Corp. reported a sales drop of 18.54 percent, to 16,366 from 20,091, while estimated sales of American Motors passenger cars numbered 3,500, down 36.36 percent from 5,500.

GM's market share dropped to 60.37 percent from 66.37 percent. Ford was up to 23.64 percent from 19.68 percent. Chrysler edged ahead to 10.95 percent from 9.83 percent. VWoA claimed 2.70 percent, up from 1.43 percent, and AMC's estimated share was 2.34 percent, down from 2.69 percent.

Four of the 14 U. S. makes were up during the period. VW advanced 37.76 percent, Plymouth was up 19.99 percent, Lincoln was up 15.02 percent and Cadillac was up 4.66 percent.

Chrysler suffered the greatest drop, down 75.65 percent, followed closely by Imperial at 73.85 percent. Also down were: Chevrolet, off 44.61 percent; Pontiac, off 38.17 percent; AMC, off 36.36 percent; Buick, off 26.61 percent; Oldsmobile, off 22.70 percent; Dodge, off 18.02 percent; Mercury, off 16.42 percent, and Ford, off 12.47 percent.

DOMESTIC SALES

	Oct. 11-20, 1981	Oct. 11-20, 1980
AMERICAN MOTORS	3,500	5,500
Chrysler	1,102	4,525
Imperial	57	218
Plymouth	8,289	6,908
Dodge	6,918	8,439
CHRYSLER CORP.	16,366	20,091
Ford	25,288	28,892
Mercury	7,995	9,566
Lincoln	2,060	1,791
FORD MOTOR	35,343	40,249
Buick	17,315	23,593
Cadillac	7,293	6,968
Chevrolet	31,428	56,744
Oldsmobile	21,350	27,618
Pontiac	12,846	20,777
GENERAL MTRS.	90,232	135,700
VOLKSWAGEN	4,031	2,926
TOTAL	149,472	204,466

• Ford Escort was the top-selling nameplate in mid-October with sales of 8,192 units. Second was Oldsmobile Cutlass Supreme at 6,598, followed by Chevrolet Citation at 6,552, Plymouth Reliant at 6,238 and standard Chevrolet at 5,309.

During the year-ago period, the top five were: Chevrolet Chevette, Citation, Chevrolet Malibu, Cutlass Supreme and Ford Fairmont.

The mid-October daily selling rate averaged 18,684, down 26.90 percent from a healthier 25,558 a year ago. There were eight days in both periods.

Year-to-date sales totaled 5,222,715, down 2.26 percent from 5,343,369 sold during the equivalent 1980 period.

Total of 205,507 is down 4.3 percent

Import registrations slip again in August

By Richard A. Wright
Assistant Managing Editor

For the second straight month, registrations of new imported cars in August declined from a year earlier, according to figures compiled by R. L. Polk & Co.

August import registrations totaled 205,507, down 4.30 percent from 214,742 a year earlier, which is the record for the month. The August total was also down a bit from the July figure of 206,653.

Imports took 28.51 percent of total U. S. registrations in August, down two full percentage points from 30.51 a year earlier. The import penetration has declined each month since hitting its all-time peak of 30.58 percent in May.

Import registrations for the first eight months of 1981 were 1,686,331, which was still running slightly (0.02 percent) ahead of 1,686,030 last year.

Imports accounted for 29.07 percent of total U. S. registrations in the first eight months, up from 28.72 percent last year.

Of the top 10 imports in August, Honda again posted the biggest gain in market share compared with a year earlier, as it took 15.23 percent of import registrations, up 1.74 percentage points.

Also increasing their shares were Subaru, up 1.50 points to 6.39 percent; Volvo, up 0.51 of a point to 2.87 percent; Toyota, up 0.31 of a point to 23.53 percent; Mercedes-Benz, up 0.25 of a point to 2.38 percent, and Mazda, up 0.18 of a point to 6.10 percent.

The gains were at the expense of Datsun, which dropped 2.43 points to 18.45 percent, and Volkswagen, down 1.25 points to 9.72 percent.

The top 10 imports accounted for 88.77 percent of registrations in August, compared with 88.16 percent a year earlier. In the first eight months, the top 10 accounted for 88.45 percent, compared with 88.79 percent last year.

• Japanese nameplates accounted for 75.7 percent of import registrations in August, up from 72.83 percent a year earlier.

Registrations by country of origin in August were:

	Aug., 1981	Aug., 1980
Japan	154,480	156,403
West Germany	35,349	40,812
Sweden	7,014	6,347
Italy	3,729	3,321
France	3,200	3,172
United Kingdom	1,735	4,679

Registrations by country of origin for the first eight months of 1981 were:

	8 mos., 1981	8 mos., 1980
Japan	1,268,993	1,260,078
West Germany	293,277	306,993
Sweden	53,091	42,666
Italy	27,281	30,511
France	29,515	23,842
United Kingdom	14,174	19,932

Registrations of imported trucks in August totaled 41,808, down 7.69 percent from 45,291 a year earlier. Registrations of imported trucks in August were:

	Aug., 1981	Aug., 1980
Toyota	12,593	12,479
Datsun	9,514	9,615
Chevrolet LUV	5,071	6,494
Ford Courier	4,853	5,952
Others	9,777	10,751
TOTAL	41,808	45,291

The truck import total for the first eight months of 1981 was 325,178 down 9.13 percent from 357,862 last year. Registrations of imported trucks in the first eight months were:

	Aug., 1981	Aug., 1980
Toyota	83,762	93,210
Datsun	73,799	73,976
Chevrolet LUV	46,975	57,840
Ford Courier	43,094	50,827
Others	77,548	82,009
TOTAL	325,178	357,862

High-level shakeup seen as Thomee quits VW post

DETROIT.—Volkswagenwerk AG appears to be in for some top-level management changes.

Friedrich Thomee, finance director and acting chairman of the board of VW, tendered his resignation after 16 years with the company.

The resignation, coupled with the continuing poor health of Chairman Toni Schmuecker, who may elect not to continue as chairman, opens up potential top positions at the company.

Thomee's resignation may have been partly inspired by his backing of the purchase of Triumph-Adler, a producer of office machines, which is losing money. Thomee's support of the Triumph-Adler purchase is considered to have hurt his chances of becoming chairman.

The possibility that Volkswagen may get a new chairman has been speculated upon for months, ever since Schmuecker first experienced his heart attack.

Schmuecker is currently working on company business on a limited basis, as his health allows, and has not decided whether to resume the chairmanship full time.

Industry sources feel he will come up with some kind of decision when the Supervisory Board holds its next regularly scheduled meeting, Nov. 13.

Thomee's request to be relieved of his position was taken as a sign that Schmuecker may decide not to reassume the full time chairmanship. Thomee has said that he would not work under a new chairman.

Speculation is that Thomee's replacement as finance director may be appointed from outside the company. The Supervisory Board must ultimately decide who will replace Thomee or Schmuecker, if he elects not to continue.

The impending changes came at a period when Volkswagen's 1981 earnings are off, dropping to $6.6 million during the first six-month period from $94.4 million in the like period of 1980.

Viewed against the massive losses chalked up by Ford Motor Co., Chrysler Corp., American Motors and—most recently, General Motors—VW's performance doesn't look too bad. But by Volkswagen's standards (the company earned $140 million in 1980), it isn't very good.

Inspection law dies in Florida

TALLAHASSEE, Fla. — Florida's 13-year-old auto inspection law in Florida ended Oct. 1, but safety experts are talking about a renewal or at least a substitute measure.

Gov. Robert Graham, who pushed for repeal, said it had never been proven to be effective in preventing accidents. He said the $17 million annual cost could be better spent elsewhere on safety measures, including more highway patrolmen.

C. C. Reynolds, who directed the inspection program from the beginning, retorted: "How can you prove you prevented something that didn't happen? But when you identify a half million cars with defective tires, you feel you prevent an accident."

More diesels

Chevrolet will continue the diesel theme, with a "more diesels than anyone (49 models, in fact)" commercial. Chevette is featured in TV and print, which will have three-page inserts running in November and spreads later in the month. Campbell-Ewald is the agency.

Chevrolet spices TV ads with a humorous touch

By Joseph Bohn
Marketing Editor

Chevrolet is opting for humor at a time when Volkswagen got more serious. So much for a consensus on what makes effective advertising.

The new Chevrolet commercials are calculated, as Russ Chick, ad manager, noted, to get more attention and memorability. It's tough to cut through the clutter of TV, as any advertiser will attest.

There's also a new, or extended, element of science in Cavalier commercials, designed to promote technology and quality, without the tedium of mundane assembly line shots and testing equipment.

Citation advertising includes four separate commercials, pitched to a "diverse group of prospective buyers," as Chick noted, "in an interesting and substantially offbeat manner."

There is a commercial aimed at working women, another at the single person, the family man and the perfect couple.

• Each commercial opens with a reference to the "hero" of the sequence.

In the working woman commercial, Ms. Citation owner walks around her Citation, pointing out a roominess that allows her to store plenty of sample products of what she's selling or accommodate five prospective customers.

"Isn't there any room in your life for more interesting things?" a concluding offcamera voice asks. "I'm working on it," she replies, letting her hair down, as her male lead arrives.

Citation commercials are also being run in a 50-market spot radio buy. Magazine advertising isn't on the agenda until at least March "at the earliest," Chick added.

The reason for concentrating on TV was that the commercials are rather difficult to translate to print ads, he added.

Chick noted that Citation was getting more weight "than we anticipated before the start of the model year. The whole business has slowed down, and Citation certainly along with it."

A new Chevette commercial continues the humorous vein. Two clergymen are walking around the car, one, the owner, pointing out standard features which comes with it. Finally, he admits to spending $89 extra on paint stripes, because "the devil made me do it."

Chevette is also featured in a diesel commercial, which calls attention to the "49 different diesels, more than any one" that Chevrolet now offers.

The full-line diesel ad, with Chevette as a feature car, will have the same format in print. Three-page inserts in the major news weeklies will break in November. Some follow-up spreads will appear in late November.

"The plan is to keep the full line diesel campaign going for the rest of the model year," Chick added.

• Caprice/Monte Carlo/Malibu continue, of course, to be promoted in the one-piece advertising, designated under a "Chevrolet Classics" heading, with multi-page inserts running in various magazines.

Two new Cavalier commercials use "Ergonomics . . . the mastery of mind over matter" to talk about high technology and superior quality.

The commercials feature a masked robot's head, with the announcer calling attention to "the relationship of man to machine . . . science practiced in the creation of . . . Cavalier (which) . . . provides an inner sanctum of precisely placed instrumentation for immediate readout" and other comforts.

"Gamma rays probe, laser beams scan, robots perform incredible feats in the creation of Cavalier, masterminded for remarkable precision, attention to detail . . ."

"Chevy makes good things happen" is the overriding theme for all the ads.

Cavalier print breaks in late November, with spread ads that feature the same approach to technology.

"Naturally there is considerably more detail about how better ways of building reliable to producing better cars," Chick noted.

Mostly, Cavalier's print encompasses mass media publications — about 10 to 12 books — with one-pagers planned sometime in the next "five to six months," Chick said.

Campbell-Edwald is the agency.

Arab vehicle market hits million a year

The Arab World has become a very significant auto market, with combined car and truck imports from Western nations totaling about one million units annually.

There are currently more than 6.6 million vehicles on Arab highways, according to a recent study prepared for the U. S.-Arab Chamber of Commerce by *Automobile International* magazine.

According to the study, there were about 5.7 million cars and trucks on the road at the end of 1979 with another 890,000 imported from Western nations in 1980.

This tally does not include 1980 vehicle importations from Soviet Bloc nations nor registrations in the countries of Djbouti and Somalia, which did not report their imports, the study said.

As the accompanying tables show, the largest source of imported vehicles last year was Japan, which shipped nearly 590,000 cars and trucks to the Arab World.

The U. S. finished the year in a distant second place, with total vehicle exports to the Arab World of 92,285.

Saudi Arabia was the largest importer by a wide margin, taking 367,651 units in 1980 for a total vehicle population at the end of the year of 1.75 million units.

Iraq was the second largest importer last year with a total of 113,727 cars and truck imports and a year-end tally of 362,000 units, although several nations had higher vehicles-in-use totals at the end of the year.

The U. S.-Arab Chamber of Commerce noted that "the 22,842 cars supplied by Canada were almost entirely General Motors vehicles, adding to the Arab market for U. S. replacement parts and other aftermarket products."

Earlier in the year, officials from several Arab nations used their high import volume of Japanese products to try to convince Japanese officials to pressure Toyota not to enter a joint North American assembly operation with Ford Motor Co. Ford, with an CKD operation in Israel, is boycotted by the Arab World.

Carina carries on rear-drive tradition

By John Hartley
Staff Correspondent

TOKYO. — Toyota has not joined the rush to front-wheel drive in redesigning its Carina, but is pursuing well-tried concepts.

The three-model range consists of three-box four-door sedan and three-door coupe and a two-box wagon. Styling is evolutionary, although the three-door coupe shares some characteristics with the recently introduced Celica.

Initially, Toyota plans to build 15,000 Carinas a month. Exports will start in a few months.

All models are based on the 98-inch wheelbase of the Celica range. This is one reason why Toyota did not change to front-wheel-drive; it thinks rear-wheel drive is more appropriate for a car like Celica. Overall length of the new models is 173 inches, while width and height are 65 and 55 inches, respectively.

All models have rectangular headlamps — two on the coupe, four on the sedan—except wagons which have four circular lamps. Other common features are plastic bumpers, a slightly dropping hood line and deep side windows.

The roof slopes down quite gradually on the sedan, and the coupe is a semi-fastback. Overall, the sedan looks rather heavy and dull, but the coupe shows sparkle.

The semi-fastback Carina coupe shows styling sparkle.

Compared with the previous models, there is slightly more interior space, but interior dimensions are generally slightly lower than those of the new Datsun 510 FWD sedan launched recently.

Weights, ranging from 2,070 to 2,530 pounds generally are in excess of those of the new Datsun, by margins of 50 to 150 pounds.

Carinas sold in Japan are available with a wide range of engines, from the 1.3-liter (79-cubic-inch) unit of Tercel and Corolla to the 2-liter (122-cubic-inch) twin OHC unit which develops 135 HP.

Included in the lineup is the new Laser 1.8-liter (112-cubic-inch) 100-HP lightweight engine introduced for the Celica.

Transmissions and strut-front suspension are orthodox. However, Toyota has extended use of rack and pinion steering to all models except the wagon, while independent rear suspension by semi-trailing links is used on the top half of the range, as it is on Celica.

Toyota has adopted electronic display instruments for several models. Headlamp lenses are plastic, resulting, it is claimed, in improved lens performance.

Venture in Sri Lanka

NEW DELHI. — Ashok Leyland, the Indian subsidiary of BL, Ltd., is setting up a joint venture in Sri Lanka (Ceylon) to build trucks and buses.

Toyota forecasts vehicle growth to 1990

TOKYO. — Toyota Motor Sales Co., Ltd., forecasts annual world demand for motor vehicles will grow to 54 million vehicles, a 32 percent increase over the 41 million sold in 1979, the last year for which numbers are available.

The company projects 1990 car sales of 41 million, a 33 percent increase over 1979. Truck and bus sales are projected to hit 13 million, a 30 percent increase.

Sales, which grew an average of 4.2 percent per year in the '70s, are projected to slow to a growth rate of slightly over 2 percent in the last half of the 1980s.

Toyota also foresees 150 million more vehicles on world roads by the end of this decade. This means by 1990 there will be 551 million vehicles worldwide, an increase of 38 percent over 1979.

Passenger car numbers will rise 40 percent to 434 million from 311 million. Truck and bus volume will grow 33 percent, rising from 88 million two years ago to 117 million in 1990.

Toyota identifies the greatest growth rates in the Middle East, Africa, Eastern Europe, Central and South America. Having matured, North American and Western European growth rates will be smaller, Toyota believes.

Predictions assume, among other factors, that supply and demand for energy will remain in balance as new energy sources are developed and stricter conservation measures are applied.

In June this year the number of Toyotas on the road outside Japan topped 10 million for the first time. According to the Japanese company, they account for one in 30 of the world's present car population.

The figure of 10.13 million is based on total Toyota exports and overseas assemblies of 13.6 million, allowing for average durability. Ten years or more is normal in most countries, reports Toyota, with the Middle East a notable exception.

Toyota's estimated numbers outside Japan are (in millions): North America, 4.32; Europe, 1.82; Oceania and southeast Asia, 1.65; Middle East, 1.12; Africa, 0.66; South America, 0.56.

It's a difficult era for technological leaps

EV industry just plugging along

Continued from Page 25

commercial internal combustion engines, the firm said.

Exxon Research & Engineering Co. engineers delivered a paper on their firm's zinc-bromide circulating electrolyte battery.

• "Basically, the present design is highly cost effective in terms of cost per kilowatt hour. This is due to the extensive use of plastics in the battery structure, particularly plastic electrodes, and the intrinsic low cost of zinc and bromide," they said.

One of the more interesting non-laboratory stories was told in a paper from Purdue University. It covered electric van home milk delivery in Prestbury, England.

About 95 drivers from five dairies and 78 consumers were surveyed. The drivers have a combined total of 764 years of electric van experience and operate them a total of 550,000 miles a year.

"Around 75 percent of the drivers surveyed prefer electric vans for delivery use and about 20 percent want an electric automobile for personal use," it said.

Booz - Allen & Hamilton, the highly regarded management/consulting firm, delivered some cold, hard comparative costs:

"Data from the Energy Department's Electric and Hybrid Vehicle Demonstration Project reveals a great disparity between the life-cycle cost of an electric (80.3 cents/mile) and a gasoline vehicle (22.6 cents/mile). The difference could be significantly reduced with modest efforts by stakeholders in the electric vehicle industry — vehicle and component manufacturers, vehicle owners and government.

"These efforts, in the key areas of battery life, usable range, annual use, maintenance, and tax credits, could result in an electric vehicle life-cycle cost of 31.3 cents/mile versus 18.3 cents/mile for a comparable gasoline vehicle. Potential for further reduction of life-cycle cost is greater for the electric vehicle than gasoline vehicles," Booz-Allen said.

GM appoints Upson

DETROIT. — Brent T. Upson has been appointed director of a newly formed Economic and Energy Policy Analysis Group of the General Motors Economics Staff. He formerly was director of economic research.

New Mazda Luce bows in Japan

Toyo Kogyo's latest Mazda model is the Luce, available in four-door sedan and hardtop versions and based on the Cosmo floorpan. Sedan versions are offered with gasoline or diesel reciprocating engines or the new Mazda six-port 2.3-liter rotary mill.

Fourth model at the top of the range

Mazda adds luxury Luce for Japan

TOKYO.—Toyo Kogyo has introduced the Mazda Luce and now offers four models at the top of its range—the two- and four-door Cosmo coupe and the four-door sedan and hardtop version of the Luce.

To cut costs, all Luce and Cosmo models share a common floorpan using a 103-inch wheelbase. The Luce hardtop and Cosmo four-door have nearly identical styling. The only difference is in the grille and tail. The Luce has a more conventional look with a narrow chromium-plated grille flanked by wide rectangular headlamps.

The Luce sedan has more sedate styling with a grille that is similar to the old model.

To suit Japanese market demands, the sedan is available with 1.8- and 2.0-liter gasoline and 2.2-liter diesel engines, and the new 2.3-liter six-port rotary engine. The hardtop is available with either the 2.0-liter gasoline or the 2.3-liter rotary engine.

The new Luce models have strut front suspension and rack-and-pinion steering. Semi-trailing-arm independent rear suspension is used on some models, while other versions have coil springs on beam rear axles located by a five-link design.

The six-port rotary engine has increased torque and improved fuel consumption, according to Toyo Kogyo. One pair of ports is open continuously, drawing mixture from the primary carburetor barrel. The second pair open with the secondary barrel, while the third pair open only near fuel throttle. The third pair are opened by a vacuum - actuated rotary valve.

As a result of this design, the port timing can be tuned to suit all conditions—very short opening during low speeds and loads to maximum opening for peak power.

Toyo Kogyo rates this latest version of its 12A rotary engine at 130 horsepower at 7,000 RPM, with maximum torque of 120 lbs./ft. at 4,000 RPM. Although producing 20 horsepower more than the 2.0-liter gas engine, maximum torque is about three foot pounds below that engine's rating.

But fuel consumption of the new rotary is closer to that of the smaller engine. On the Japanese city cycle, the rotary yielded 23 MPG, compared with 28 MPG for the reciprocating engine. At a steady 37 MPH, the rotary yielded 41 MPG, while the reciprocating engine hit 45 MPG.

Makers schedule 464,260 cars, 16 pct. below last year

November production plans bleak

By Patricia Hoffman
Staff Writer

Domestic auto production last week dropped from the previous week's total because of downtime at six assembly plants for inventory adjustment and model changeover.

Output was targeted at 119,232 units last week, down 8.40 percent from 130,168 the previous week, and down 23.21 percent below the 155,279 units in the comparable 1980 week.

So far this year, the auto makers have completed 5,523,802 units, a gain of 2.57 percent from 5,385,510 in the comparable period last year.

The outlook for November is anything but favorable for the auto makers, with the month's forecast 16.56 percent below the comparable 1980 month.

November production is targeted at 464,260 units, down from 556,380 completed in the year-ago month.

Breakdown for the month by company is: General Motors, 310,000, a drop of 6.43 percent from 331,301 last year; Ford Motor, 85,000, down 31.68 percent from 124,406; Chrysler Corp., 45,000, down 36.98 percent from 71,404; Volkswagen of America, 14,000, down 11.02 percent from 15,734; American Motors, 10,000, down 24.59 percent from 13,261, and Checker Motors, 260, a drop of 5.11 percent from 274.

Breakdown for last week by company is: GM, 59.79 percent; Ford, 25.34 percent; Chrysler, 9.73 percent; VWoA, 3.44 percent; AMC, 1.68 percent, and Checker, 0.02 percent.

Downtime was scheduled last week at GM's Southgate and Linden facilities. Both plants, down for inventory control, are slated to resume operations today (Nov. 2).

Also at GM, the Leeds plant, down since Oct. 12 for model changeover, is scheduled to resume today with J-car production.

GM's Detroit (Cadillac) point resumed two shift operations today. The plant, which was idle one week for plant rearrangement, resumed last week with one shift.

Ford's San Jose facility was idle last week for inventory control. The plant is slated to return today.

Chrysler's Belvidere plant was idle last week, beginning a three-week shutdown for partial conversion to produce the company's new front-wheel-drive Dodge Rampage pickup truck. The plant is scheduled to resume production the week of Nov. 16.

AMC's Kenosha facility will be idle one week for inventory adjustment beginning today.

Checker Motors' Kalamazoo plant will go down Nov. 18 for model changeover. The point is scheduled to return with '82 production Jan. 11.

Saturday overtime was scheduled last week (Oct. 31) at Ford's Wixom facility.

Truck production slated to drop 4 pct. for month

U. S. truck production last week dropped from the previous week's output and the total was also down from the comparable 1980 week.

Last week's truck production was targeted at 35,166 units, down 7.25 percent from 37,913 trucks in the previous week, and down 18.16 percent below the 42,971 units in the comparable 1980 week.

So far this year, the truck makers have completed 1,414,395 units, a gain of 8.03 percent from 1,309,293 trucks in the comparable period last year.

Automotive News' November forecast for the major truck manufacturers is 137,895 units, a 4.88 percent decline from last year's November total of 144,973.

Breakdown for November by company is: General Motors, 75,000, up 8.71 percent from 68,992 last year; Ford Motor, 41,000, down 28.76 percent from 57,552; Chrysler Corp., 7,600, up 78.66 percent from 4,254; American Motors, 8,500, up 23.42 percent from 6,887; International Harvester, 3,395, down 32.09 percent from 4,999, and Volkswagen of America, 2,400, a gain of 4.85 percent from 2,289.

International Harvester's Ft. Wayne and Springfield facilities were idle last week for inventory adjustment. Both plants are slated to resume operations Nov. 9.

AMC's Toledo (Jeep) point will be idle one week beginning today (Nov. 2) for inventory control.

Imm reaches 25

Wayne Imm, right, owner of Imm & Son Chevrolet, Toluca, Ill., receives his 25-year dealer award plaque from W. M. Gilligan, Chicago zone manager for Chevrolet.

Auto production in Canada up 2 pct. for week

Canadian auto production last week showed a slight gain from the previous week's output as the line rate at American Motors' Brampton facility continues to increase with the addition of its second shift last Oct. 19. The rate is expected to eventually reach a two-shift total of 960 units per week, up from the former 730 per week on one shift.

The auto makers scheduled 15,557 units last week, up 2.65 percent from 15,155 in the previous week, but down 25.37 percent from 20,845 in the comparable 1980 week.

So far this year, the auto manufacturers have assembled 678,856 units, a drop of 4.01 percent from 707,210 in the comparable period last year.

Truck production was slated at 11,167 units last week, a drop of 2.86 percent from 11,496 in the previous week, and down 16.70 percent from 13,405 trucks in the comparable 1980 week.

Year-to-date output for the truck makers is 428,772 units, down 5.01 percent from 451,410 trucks in the comparable period last year.

General Motors' Oshawa (No. 2) facility will remain idle this week (Nov. 2), completing its last week of an extensive 13-week model changeover. The facility, which was idled Aug. 6, will resume with '82 production next Monday (Nov. 9).

Ford Motor's St. Thomas facility, idled Aug. 31 for changeover and inventory adjustments, will remain idle this week. The point is slated to resume production Nov. 10.

GM's Ontario truck facility closed today (Nov. 2) for inventory adjustment. The point is scheduled to return Nov. 9.

758 U.S. dealerships lost in year; rate of loss slows

By John K. Teahen Jr.
Managing Editor

Better than last year, but still pretty dreadful.

That's a brief summation of the dealer mortality situation in the domestic auto industry for the 1981 model year.

The latest AUTOMOTIVE NEWS census found 21,187 dealerships handling U. S. makes of passenger cars as the '82 model year began on Oct. 1. This was down 758 from the 21,945 counted a year earlier.

The loss for the '81 model year was less than half as large as the 1,643 outlets that left the business in the '80 season, but the '80 model year was the industry's worst ever from a standpoint of dealer mortality.

Aside from '80, the decline of 758 outlets for '81 was the most severe since the 1970 model year, when the toll was 793.

The '81 season saw a drop of 60 dealers for American Motors, 131 for Chrysler Corp., 282 for Ford Motor Co. and 330 for General Motors. That's a total of 803. A decline in the number of intercorporate duals cut the industry's net loss to 758.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

Looking only at the 1981 calendar year, the present total of 21,187 dealerships is down 585 from the 21,772 in operation on Jan. 1. In 1980, the nine-month dip was 1,434.

The third quarter was the toughest of the year. It cost the industry 260 dealers, following declines of 221 in the first quarter and 104 in the second. In 1980, the third-quarter dropoff was 504 dealers.

• Returning to the model-year figures, Chrysler Corp. and Ford Motor Co. fared much better in '81 than in '80. Chrysler lost 131 outlets in '81, but it lost more than five times that many the previous year—674. Ford's decline of 282 was about half of the 544-location slip it suffered in the '80 model year.

GM's downturn was about the same each year — 330 in '81 and 340 in '80. AMC had a decline of 60 outlets in '81, up from 25 in '80.

Copyright, 1981, Automotive News

The dealer attrition for the last two model years is a further indication of how devastating a period this has been for the domestic auto industry. In that 24-month span, the industry lost 2,401 outlets (after adjusting for changes in intercorporate duals). This was more than 10 percent of the entire retail organization.

In the franchise area, four Big Three makes had increases during the '81 model year, while the other eight suffered declines. Chrysler Corp. had three of the gainers — Dodge added 93 franchises, Imperial picked up 61 and Plymouth added 54. Cadillac was up 5.

The two biggest dealer organizations had the biggest losses. Ford was down 237 outlets for

Open-air Cavalier

Concept car's a dream

A Cavalier convertible was displayed by Chevrolet at last week's South Florida Auto Show, and the division plans to feature the topless J-car at other shows during the year. Prepared as a concept vehicle, the refashioned front-drive subcompact is painted a special metallic white, has a chocolate brown fabric top and compatible interior with leather seats. There are no immediate plans to offer such a car for sale, according to Chevrolet.

breaking news

Chrysler names 2 vice presidents

DETROIT. — Chrysler Corp. directors last week elected E. Thomas Pappert vice president, U. S. automotive sales, and John K. Givens vice president, marketing. Pappert, with Chrysler since 1962, has been general sales manager. Givens, a Ford Motor Co. veteran, has been Chrysler's executive director, marketing. He joined Chrysler in 1979.

All 1973-79 Hondas in U.S. recalled

WASHINGTON. — American Honda is voluntarily recalling some 940,000 cars in the U.S. to inspect for undercarriage corrosion that could pose a safety problem. Dealers will inspect all Hondas sold from 1973 to 1979 for possible damage from road salt. Honda started using epoxy resin paint in 1980. A special tool will be developed to measure the extent of corrosion. Although no more than 2 percent of the cars may need repairs, Honda's estimated cost is about $20 million. Honda recently recalled Canadian cars for the same problems in three provinces and will inspect and fix, if necessary, all Canadian cars.

Debut is 2 months away; prices start at $8,313

New A-cars trickle to GM dealers

By Jim Plegue
Staff Writer

General Motors dealers last week received price information on the company's new A-body intermediate models, and some dealers had already taken possession of at least one of the new cars.

What makes this unusual is that public introduction date for the new front-wheel-drive models is still two months away, scheduled for Jan. 14. It has become typical of this year's unusual new-model schedule, a topsy-turvy period of staggered introductions that has left many GM dealers miffed.

"I've been in this business for 27 years and I've never seen it in such a disarray as it's in right now," complained a large Chevrolet dealer.

Prices for the front-drive A models — Chevrolet Celebrity, Pontiac 6000, Oldsmobile Cutlass Ciera, and Buick Century— were not going over well with GM dealers AUTOMOTIVE NEWS talked to. The A cars start at $8,313 for the base two-door Chevy Celebrity and jump to about $9,700 for the Oldsmobile Cutlass Ciera Brougham four-door.

Those prices do not include destination charges ranging from $385 to $400. A GM spokesman said prices were announced now to allow dealers to write fleet sales.

Some dealers are concerned with the price spread between the A and X-cars. A four-door Pontiac 6000, according to a dealer, will cost about $8,800, nearly $1,600 more than a 1982 Phoenix four-door hatchback model. The A and X have similar design features, though the A-body is slightly larger and has power steering and brakes and automatic transmission as standard equipment.

Gary Tursi, new-car sales manager for Derio Oldsmobile, Inc., West Caldwell, N. J., noted a similar pricing problem by comparing Ciera with his standard-size cars.

"We sat down last night and did some comparisons and found that you can buy a Delta 88 Royale Brougham for the same price you pay for many of these (Ciera) models," Tursi said. "So we're really disappointed with the price. We expected it to be a little lower.

"Nobody has ever doubted the car would sell. It's just a matter of pricing structure. When you can buy an 88 Brougham for the same price, something just isn't right somewhere."

Tursi said he would be giving the Ciera a better chance in the market by limiting his orders of the lower-priced X-body Omega models, noting that "Omegas are what we have the most of right now anyway."

The higher A-car prices, in fact, may work to the advantage of many GM dealers, who have found themselves with unusually high stocks of the lower-priced 1981 X-body (Omega, Phoenix, Citation and Skylark) left to sell.

Some dealers AUTOMOTIVE NEWS talked to had already re-

GM loses court plea to upset diesel rule

WASHINGTON. — The Supreme Court has refused to hear a petition from General Motors seeking to overturn a 1985 diesel particulate emissions standard it says it cannot meet.

The effect of the court's action is to let stand an appeals court ruling that EPA acted "responsibly" in setting a diesel particulate standard of 0.2 grams per mile for 1985 light-duty vehicles and a 0.26 grams per mile particulate standard for light trucks.

Diesels emit nearly 100 times more particulate matter per mile of travel than gasoline engines do. These particulates are minute and when inhaled tend to come to rest in the deepest reaches of the lungs. Known to be carcinogenic in animals, there is concern that they may also be for humans although no concrete evidence exists to support this.

General Motors, Mercedes-Benz and Volkswagen of America had challenged the standards before the U. S. Court of Appeals on the ground that technology to control particulate emissions to those levels was not and would not be available.

In question is the so-called trap oxidizer, basically a catalyst for diesels that would either continuously or at scheduled intervals incinerate diesel particulates captured by it.

Though they were not fully developed when EPA issued the particulate standard in the spring of 1980, trap oxidizers have come closer to reality over the past year.

Johnson-Matthey, for example, recently sent data to the EPA indicating its regenerative trap oxidizer has survived to 25,000 miles with no problems while keeping oxides of nitrogen emissions below 1.0 grams per mile, particulate emission well below 0.2 gpm and with no loss of fuel economy.

GM has now begun an extensive testing of the Johnson-Matthey concept. Still, a GM spokes-

Only crisis could sell UAW on concessions, Fraser says

By Marjorie Sorge
Labor Editor

DETROIT. — General Motors and Ford Motor Co. should stop paying dividends, go to the debt market and begin more white-collar layoffs if they expect union concessions in next round of negotiations, according to UAW President Douglas A. Fraser.

"First of all, the members would have to perceive that the corporation is in very serious difficulty and I don't think it would be possible to do another Chrysler unless there is a crisis atmosphere," he said. "It's impossible to sell to the membership without them perceiving an equality of sacrifice and being assured of that equality of sacrifice."

Douglas A. Fraser

Both auto companies have been badgering the union to reopen the current contract and reduce labor costs and have indicated concessions from the union will be demanded in 1982 negotiations.

Such concessions may be the cornerstone for future reductions in salaried time off with pay. Company insiders say it is possible the white-collar workers will be experiencing cuts in their time off, such as fewer paid personal holidays before the next round of negotiations.

In an interview with AUTOMOTIVE NEWS, Fraser also said phased-in benefits based on seniority were a possibility to reduce labor costs but said changes in the 30-and-out program are "untouchable" and putting a cap on COLA is "impossible."

He also indicated company-specified contracts are not at the top of the list in next year's negotiations and that putting Chrysler workers back on the road to parity would be better than introducing a three-tiered wage system.

• Fraser also rejected co-pays for insurance plans and an idea for introducing different life and health insurance programs geared toward individual needs, with employes picking up part of the tab for more coverage. Co-pays have been on the bargaining table before and have been soundly defeated for basic health and life insurance plans. Vision and dental coverage are, however, co-pays.

Alfred S. Warren, GM vice-president, labor relations, and Peter J. Pestillo, Ford vice president, labor relations, told AUTOMOTIVE NEWS (Oct. 26) these ideas might be ways to lower labor costs. GM's total annual bill for benefits is $4.4 billion for all employes, both hourly and salaried. Its cost for health insurance alone is $1.5 billion a year while pension costs are $1.8 billion.

Both executives said they would be looking at eliminating or drastically changing the 30-and-out program, capping COLA and eliminating some PPH days among others, and are confident costs can be lowered without cutting wages. Fraser said there are currently no plans to concede any PPH days or anything else.

Ford and GM have contended they have an $8-per-hour labor cost differential with Japan and intend to get that back in next year's negotiations. But, Fraser said, the UAW, while admitting there is a wage disparity, believes it is considerably less than $3.

• He said the difference concerns the UAW but "if we start down that road and try to match the Japanese labor costs the next thing you know, it doesn't stop there and you'll be matching the Korean labor costs.

"If we were to wave a magic wand and say, 'OK, we'll agree to go down to the Japanese wage levels,' which would mean we'd have an advantage because of the shipping costs, then anybody who knows the Japanese must believe they would reduce their wages," he said.

He said Pestillo and Warren are like "a couple of kids before Christmas. They have a wish list that they are going to give Santa Claus and we don't believe in Santa Claus."

However, he said if concessions should be considered, the workers must perceive an equality of sacrifice, otherwise

Service Index gains for 7th straight month

By Francis J. Gawronski
Service Editor

Although service and parts business in new-car dealerships continued on the upside in September, the rate of growth declined from that recorded in the previous month for the third consecutive month.

According to the Automotive News Service Index, shop business in September was 104.4 percent of the volume achieved in the same month in 1980. Service and parts business had been up 105.7 percent in August, 109.8 percent in July, and 116.6 percent in June.

September was the seventh consecutive month in which dealers' shop business has shown an increase over the comparable year-earlier period. It also marked the first time since June that all five indicators used in the Service Index were on the plus side.

The top gainer among the indicators was shop parts sales (those used on customer-paid and warranty repairs), up 8.9 percent, followed by total labor sales (customer-paid and warranty), up 6.6 percent.

Gross profit on all labor, parts and P&A sales—the most important indicator from the dealers' viewpoint—was up 4.6 percent in September, compared with 9.7 percent in August.

Sales of all parts and accessories were up 3.9 percent, while repair orders written were 1.3 percent ahead of the year-ago volume.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

Service and parts business in the first nine months of 1981 amounted to 105.4 percent of the volume recorded in the same period of 1980.

Gross profit was the leading indicator in the January-September period, up 9.1 percent, followed by sales of parts and accessories, up 6.9 percent, and shop parts which increased 6.3 percent.

Labor sales advanced 3.5 percent, which repair orders written registered 3.5 percent on the downside.

SERVICE INDEX
104.4*

	Sept., '81 vs. Sept., '80	9 mos., '81 vs. 9 mos., '80
Gross Profit on All Labor and P&A Sales	+ 4.6%	+ 9.1%
Repair Orders Written	+ 1.3%	- - 2.7%
Total Labor Sales (Customer & Warranty)	+ 6.6%	+ 3.5%
Shop Parts Sales (Customer & Warranty)	+ 8.9%	+ 6.3%
Sales of All P&A	+ 3.9%	+ 8.9%

*—Survey by Automotive News shows that dealers' service and parts business in Sept., 1981, was 104.4 percent of business in Sept., 1980. Service business in the nine months of 1981 was 105.4 percent of business in the corresponding period in 1980.

Ford will shut down Dutch assembly plant

AMSTERDAM, Netherlands.—Ford Motor Co. plans to close its assembly plant here Nov. 24. The company wanted to shut down the operation Sept. 30, but was restrained by a court ruling issued in July. That ruling, sought by the unions, transferred the case to a special court for labor conflicts.

The labor court has rescinded the injunction, which enables Ford to shut down the plant. Ford Nederland had a first-half loss of about $21 million.

Democrats ask Reagan for special credit help

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A group of Democratic Senators, led by Michigan's Don Riegle, who heads a Task Force on High Interest Rates, have put in a Senate Joint Resolution urging the President to persuade the Federal Reserve Board to "target" credit toward the auto industry, housing, farmers and small business.

Support comes from such Democratic luminaries as former Majority Leader Robert Byrd and Senators Ted Kennedy, Henry Jackson, John Stennis, Howard Metzenbaum and others.

Although billed as a "major legislative initiative," it is not even a bill, merely a resolution which has not very much clout.

When asked about this at the press conference, senators admitted they might not be able to get such a bill passed, but in any case — in Senator Kennedy's words — the "Fed followed the flag" and the "flag" now is President Reagan, who wants high interest rates.

The resolution mentions auto manufacturing as one key sector hurt by high interest rates that are "preventing consumers from financing basic car purchases, are placing unbearable inventory costs on car dealers and are forcing manufacturers to delay vital investments in more productive plants and equipment."

• Byrd said he backs putting "Main Street" instead of "Wall Street" on the Federal Reserve Board when the next vacancy occurs. Metzenbaum, noting that recently $46 billion in bank credit was made available by bankers so corporate mergers can take place, suggested the President get rid of William Baxter, head of the Antitrust Division at the Justice Department, who seems "willing to approve almost anything that comes down the pike."

Several agreed that bankers do not care about interest rates or live on the spread, but the rates have brought "depression" to housing and car sales.

What the resolution does is merely urge the President to cooperate with the Federal Reserve System by Nov. 25 so that an "adequate flow of credit to small borrowers" shall be available, with particular attention to housing, car credit, farmers, and small businesses.

The President and the FRB are also to "limit" the diversion of limited money to nonproductive uses such as mergers and takeovers and take "non-inflationary actions" needed to reduce interest rates. The President is to consult with auto dealers and other small businesses and then report to Congress within 30 days.

This stops short of credit controls or credit allocation — both of which are adamantly opposed by the Reagan Administration— but some senators indicated the resolution might be only the first step toward stronger moves if the Democratic minority feels it can swing some sort of action.

But all agreed that since the FRB is following Reagan Administration policy, the first move should be to sway the White House.

Innovator

Dr. V. Durga Nageswar Rao, Ford Motor Co. principal research engineer, cradles six Ford Innovation Awards — highest number given to any one employe — recently presented for his work on complex components of advanced engines. Rao has received 27 patents since joining Ford in 1967.

More time; more dealers; cash for rentals

Chrysler rebate plan extended and expanded

By Joseph Bohn
Marketing Editor

Chrysler Corp. has extended its rebates on some import cars and trucks and has opened its entire rebate program to admit dealers who may have changed their minds about joining.

At the same time, it is pushing daily rental and leasing for its new Chrysler LeBaron and Dodge 400, with new cash incentives.

Ford also added extra money to its Courier rebate.

In a communique to dealers, Chrysler announced an extension of the rebates or Savings Certificates program on '81 import cars and trucks, assigned between Oct. 1 and Dec. 11, 1981, but not sold before Dec. 31.

Savings certificates or rebates on these imported cars and trucks have been extended through Feb. 28, 1982.

Essentially, Chrysler is re-allocating certain of its import vehicles to dealers because some dealers who signed up for its rebate program originally wouldn't accept the imports in the mix prescribed for them.

The extension allows extra time on imports currently still in transit to dealers.

Chrysler also noted that, since the extension changed the value of the Savings Certificate program, it was extending the qualification period from Oct. 23 to Nov. 6.

In essence, dealers who had not signed up by the original Oct. 23 date, i.e., submitting 70 percent of their order allocation, still had a chance to get in by submitting required allocation orders by the new Nov. 6 deadline.

Sources said the company had signed 70 percent of its dealers to accept 80 percent of the volume it planned for the fourth quarter — but was leaving the door open for the remaining dealers to sign up.

• The company also announced a new VIP lease program for Dodge 400 and Chrysler LeBaron, designed to attract "community and business leaders and government officials" to lease these vehicles.

If a dealer submits new lease orders on LeBarons and Dodge 400s by Dec. 1 for shipment by Dec. 31, 1961, he receives an extra $500 per vehicle which, in addition to the $500 allowed under a previous lease provision, provides a $1,000 discount in total.

Similarly, an extra $500 was offered dealers for LeBarons and Dodge 400s placed into daily rental on units ordered by Dec. 1 for shipment by Dec. 31. Again, the new $500 plus a previous $500 allowance would give dealers $1,000 on these vehicles.

Payment to dealers would be made in the form of a reduction in the invoice price of the vehicles, Chrysler said, adding that units placed into daily rental or ordered prior to the new program — or following it — would not qualify for the extra $500.

There was some speculation that, in view of October's disastrous industry sales, Chrysler would end up including LeBaron and Dodge 400 in its regular rebate or Savings Certificate program, as well.

Ironically enough, the company's strongest car line is the New Yorker which has received little promotion.

Dealers report that the New Yorker, which is being rebated at a time when it is on allocation because of shortages, has already garnered as many retail orders as were planned for the entire model year.

Company officials had set modest sales goals for New Yorker. The rebound in sales has caught many industry planners off guard.

Meanwhile, Ford is giving dealers $750 on Couriers ordered between Nov. 2 and Dec. 2 and sold within 60 days of the time they receive them.

Essentially, the division has about 5,000 '81 Couriers still at ports which it wants to clear away.

Ford already has a $500 consumer rebate on Courier. If any of these newly covered units arrive and are sold during its current Courier rebate, customers will receive their $500 from the factory and dealers will receive the extra $250. There would be no double payments on units covered under the new program.

Wheels for Oktoberfest

New 1982 Honda Accords, from Kingsway Honda, were used to help celebrate the Kitchener/Waterloo 1981 Oktoberfest in Kitchener, Ont. Accords transported dancers to the local parade in style.

UAW workers ratify pact with immediate 50-cents-an-hour raise

VW accord sets wages at GM level

By Marjorie Sorge
Labor Editor

The UAW and Volkswagen of America have negotiated a new 16-month contract which will give the 4,600 union workers at the Westmoreland (Pa.) plant wage parity with General Motors in June, 1982.

Workers ratified the agreement Nov. 1 It gives most production workers a 50-cent-per-hour raise immediately, while skilled trades people get a 60-cents-an-hour increase. They will get another 10-cent raise June 1, 1982, to bring them to parity with GM.

The current base rate for an assembler at VWoA is $8.20 per hour. The 50-cent raise, plus 77 cents diverted from the $2.56 in COLA benefits and the 10-cent increase in June will bring the base rate to $9.57. A GM assembler is making $9.63 per hour.

A tool maker at VWoA was making $10.14 per hour before this contract. After June, 1982, that worker will be getting $11.61 per hour. A GM tool and die maker is paid $11.88 per hour.

GM's current contract with the UAW expires Sept. 15, 1982, while VWoA's ends March 7, 1983.

In the new VWoA contract, the company agreed to give its workers any Annual Improvement Factor (AIF) negotiated at GM in next year's bargaining. The current rate is 3 percent annually.

But there is a push/pull relationship to that agreement. While any AIF would be granted to the VWoA workers, they must also accept any concessions made in the GM contract.

Many labor observers believe that is a distinct possibility, since both Ford Motor Co. and GM have made loud noises about the need to reduce labor costs.

The new contract also gives the workers a new paid holiday — Deer Day — for the opening day of deer hunting season, Dec. 1. The VWoA workers will get that day off in both Decembers of the current contract.

In addition, there is one other bonus holiday in December both this year and next, also failing during deer hunting season. That gives the workers 10 paid holidays in 1981 and 15 in 1982.

• Unlike the workers at GM and Ford, those at Westmoreland get no personal paid holidays. Workers at the Big Two get 26 PPH days over the life of the current agreement.

Although they will reach parity with GM in 1982, the VWoA production workers ratified the agreement by a mere 4-3 margin, while skilled trades favored it by 3 to 1.

The parity question has been a problem for both the union and the company. When the first contract was negotiated in October, 1978, the VWoA workers wanted immediate parity with GM and staged a one-week wildcat strike to protest an agreement which kept their wages lower than GM's.

The UAW said VWoA was given a break because of the high startup costs for the company to build a plant in the U. S. VWoA is a subsidiary of West Germany's Volkswagenwerk AG.

The strike ended when the union and the company negotiated a revised contract which speeded up the timetable of raises. However, the workers did not get parity with GM.

The recently negotiated contract also changed the way the COLA benefit is determined. Effective March, 1982, it will be calculated on the basis of one cent per hour for every 0.26 of a point change in the Consumer Price Index, instead of 0.3. Ford and GM made that change in the 1979 contract.

Changing the COLA calculation will generate more COLA benefits, which have been increasing dramatically with the high inflation.

Also, the UAW-VWoA Unemployment Benefit (SUB) will now have $1 million up-front protection to assure immediate layoff protection for workers even if the basic SUB fund is in debt.

With the contract expiring in 16 months, union officials say they will then try to negotiate a master agreement for all of VWoA's workers in 1983. The contract at the company's Fort Worth plant expires March 15, 1983, and the one covering workers at the plant in South Charleston, W. Va., ends Jan. 17, 1983.

Slow sales to close 19 plants Dec. 14-Jan. 4

IH to shut down for long holiday

CHICAGO. — Slow sales and rising inventories have forced International Harvester to extend the normal Christmas holiday plant shutdowns this year at major manufacturing operations in the U. S. and Canada.

The plants, 16 in the U. S. and three in Canada, wil close Dec. 14, with most of them reopening Jan. 4.

However, Donald D. Lennox, executive vice president of the firm's manufacturing group, said the shutdowns could last longer if necessary "to maintain inventories at desired levels in this time of high interest rates."

For most plants, the shutdown will be eight weekdays longer than the industry's customary seven-weekday holiday closing.

Included in the closings will be Harvester's major manufacturing facilities for medium and heavy trucks, agricultural equipment and construction machinery.

Lennox said the decision on the extended shutdowns was made at this time "to allow the customary six-week period necessary to notify suppliers and adjust the flow of parts and materials to the plants."

• More than 20,000 of Harvester's 50,000 employes will be idled by the closings, most of them in the Midwest and Canada. About 10,000 already have been laid off indefinitely.

Under the UAW contract, employes must work during the week prior to the holiday shutdown to qualify for the seven-weekday pay. Since the Harvester plants will be idle the week before the traditional closing, a spokesman said, Harvester workers will receive no pay during the shutdowns.

Harvester's supplemental unemployment benefits (SUB) fund also is nearly exhausted and will not be paying benefits. Employes will be receiving only unemployment compensation in their respective states of employment, according to a UAW spokesman.

Meanwhile, Harvester said it will send draft agreements of its $4.5 billion debt-restructuring plan to more than 200 of its lenders.

The plan calls for creditors to convert the company's short-term debt into a $1.5 billion term loan and to convert its credit subsidiary debt into a $1.9 billion term loan, both repayable Dec. 15, 1983.

Harvester reportedly has told its directors that operating losses for the fiscal year ended Oct. 31 could exceed $500 million.

Toyota Celica exports top 1.5 million units

TOKYO. — Toyota Celica has reached an export milestone: 1.5 million of the specialty cars have been exported since the first generation of the car was unveiled at the 1970 Tokyo Motor Show.

At home, the Celica sold 560,000 models through September, Toyota said.

AOT is renamed Hall of Fame; expansion voted

MIDLAND, Mich.—The Automotive Organization Team has been restructured and renamed Automotive Hall of Fame, Inc.

Directors also voted to double the size of the current building on the campus of Northwood Institute here.

Included in the new organizational set up are plans to increase the number of local AOT councils and establish a 25-year club and a Golden Old Timers association for those who have been in the industry for 50 years or more.

"We plan to provide a forum in several major cities around the country where key people can gather once or twice a year to renew friendships and honor those who have served and are serving," said Drex Minshall, chairman. Currently, councils exist in Michigan, New Jersey and Florida.

AOT was founded in 1938 as the Automotive Old Timers and was later renamed Automotive Organization Team.

A Hall of Fame building was constructed and dedicated here in 1976. It also houses a library and AOT headquarters.

Model-year loss of 758 less than half of previous year's

Dealership mortality rate slowed

Continued from Page 1

the model year, and Chevrolet was off 200. Also on the downside were Pontiac, 60; Mercury, 56; Oldsmobile, 45; Chrysler, 30; Buick, 15, and Lincoln 8.

Although its dealership total slipped, Chrysler Corp. showed an increase in franchises for the '81 model year. This means there has been more dualing within the corporation.

• As noted, AMC had the lightest loss of the four manufacturers during the '81 model year. AMC had 1,592 dealers on Oct. 1, down 60 from 1,652 a year earlier.

AMC has 627 duals with Big Three makes of passenger cars, compared with 685 when the '81 season began.

Chrysler Corp.'s total of 3,740 car dealers compares with 3,871 a year ago. Although the total is down, Chrysler has definitely slowed its rate of decline — 131 for the '81 model year vs. 674 for '80. In the April-June period this year, Chrysler showed a gain of 10 outlets, its first quarterly rise since the final three months of 1977.

The Oct. 1 franchise totals for the Chrysler makes were: Chrysler, 2,659; Plymouth, 2,536; Dodge, 2,445, and Imperial, 416.

In addition to its 3,740 car dealers, Chrysler Corp. has 9 that handle only Dodge trucks. They are not included in the corporation's car dealership total or the Dodge car franchise total.

Ford Motor Co. slipped below 6,000 during the '81 model year. Its current count of 5,720 compares with 6,002 in October of 1980. The dip for the model year was 282 establishments.

Franchise counts on Oct. 1 were: Ford, 4,862; Mercury, 2,667 and Lincoln, 1,471.

There are 94 dealerships that handle only Ford heavy-duty trucks. They are not included in the car dealer count for the company or the car franchise total for Ford Division.

GM, like Ford Motor, dipped into a new "thousand" bracket during the '81 campaign. GM had 10,805 car dealers as the new model year began, down 330 from 11,135 on Oct. 1, 1980.

Franchise totals for the five GM makes are: Chevrolet, 5,510; Oldsmobile, 3,210; Pontiac, 3,075; Buick, 2,970, and Cadillac, 1,605.

As mentioned above, the first nine months of the 1981 calendar year brought a loss of 585 domestic new-car outlets. By corporations, there were dips of 255 for GM, 241 for Ford Motor, 83 for Chrysler Corp. and 71 for AMC. That total of 650 was reduced to 585 for the industry by a change in the number of intercorporate duals.

The third quarter resulted in declines amounting to 120 outlets for GM, 100 for Ford Motor, 42 for Chrysler Corp. and 43 for AMC. The adjustment for the change in intercorporate duals cut the industry's net loss to 260 outlets for the July-September period.

Domestics 26 pct. below last year; imports off 13 pct.

October sales lowest since 1958

By Jenny L. King
Staff Writer

October was a month the U. S. auto makers probably would rather forget, and the sales numbers should not be chiseled in stone for all to admire.

Sales of both domestic and imported new cars plummeted during the month, with domestic figures at their lowest since 1958 and imports down 13.86 percent from year-ago levels.

The five major U. S. auto makers reported a total of 491,107 retail sales during the first month of the 1982 model year, down 26.02 percent from 663,843 a year earlier. October sales were even lower than September cleanup sales — down 5.29 from 518,522—and were down 18.39 percent from August's 601,741.

October sales this year were down a startling 44.44 percent from October, 1978, when retail deliveries totaled 883,926.

Imports, though down 13.86 percent, to 157,077 from 182,348 last year, captured 24.23 percent of the entire new-car market, up from 21.60 percent a year ago. This was a sizeable chunk considering the fact that it was model-introduction season for the domestics.

Total sales for October numbered 648,184, down 23.40 percent from 846,191 last year.

Domestic year-to-date sales totaled 5,416,984, down 2.89 percent from 5,577,544 in 1980, while import sales for the first 10 months of 1981 reached 2,006,934, down 2.01 percent from 2,048,200.

The industry total through Oct. 31 was 7,423,918, down 2.65 percent from 7,625,744 the preceding year.

• Volkswagen of America was the only U. S. manufacturer to enjoy a sales gain for the month. VWoA dealers sold 15,264 new Rabbit sedans, up 33.70 percent from 11,417 in 1980. General Motors took the hardest fall, its sales down 29.41 percent to 295,473 from 418,575.

Ford Motor Co. reported a sales drop of 25.57 percent, to 113,760 compared with 152,832 a year ago. Chrysler Corp. sales numbered 56,992, down 17.21 percent from 68,843. It was the company's first monthly drop since September, 1980. American Motors sales of 9,618 were down 21.01 percent from 12,176.

GM's share of the domestic market for the month was 60.16 percent, down from 63.05 percent a year earlier. Ford earned 23.16 percent, up from 23.02 percent. Chrysler sales accounted for 11.16 percent, up from 10.37 percent. VWoA climbed to 3.11 percent from 1.72 percent, and AMC held on to 1.96 percent, up from 1.84 percent.

Three of the 14 domestic makes were up in October: VW sales were ahead by 33.70 per-

Sundowner burns up Bonneville Salt Flats

A modified, stock-block Chevrolet engine assembled and turbocharged by Gale Banks Engineering, of San Gabriel, Calif., has propelled a stock-bodied 1968 Corvette to a new unlimited-GT class record of 240.78 MPH at the Bonneville Salt Flats. Banks squeezed 1,100 HP from a gasoline-fueled 430-CID Chevrolet engine inside the Kehoe-McKinney-Banks Sundowner Corvette, beating the former record by more than 35 MPH.

breaking news

Chrysler designers must keep UAW

DETROIT.—A petition by five Chrysler Corp. designers to oust the UAW as their bargaining agent has been dismissed by the National Labor Relations Board. The designers were angered last July when the union forced Chrysler to rescind a 12-percent pay raise for them, citing the need for equality of sacrifice within the company. The NLRB ruled that all 4,500 Chrysler engineering department workers would have to vote on the decertification of the UAW.

GM extends car-house promo to New York area.

DETROIT.—General Motors' "Buy a house, get a car" promotion to sell homes of relocated employes has been extended to the metro New York/New Jersey/Connecticut area during Nov. 5 to Dec. 13. It helped to sell 46 of 112 homes in metro Detroit during a five-week trial. GM has 42 homes for sale in the metro New York area. None of the Detroit-area buyers opted for the new car, choosing a price reduction instead.

Workers buy out GM bearing plant and take pay cut

CLARK, N.J. — Workers at General Motor's New Departure-Hyatt plant approved a contract which includes a provision to buy out the facility from GM for between $53 and $55 million, and GM Chairman Roger B. Smith turned over the keys to the new company.

A new employe-owned corporation, Hyatt-Clark Industries, bought the facility under the federal Employee Stock Ownership Plan. Under this plan, employes and management share equally in the stock and ownership of the plant.

GM announced the closing of the plant last March because changes in car design to front-wheel-drive had reduced the demand for the type of tapered roller bearings the Clark plant manufactured. Also, GM said the operation had not been competitive in the industry.

Since then there has been a concerted effort by the members of UAW Local 736 to buy the facility. Approval of the membership was the last step in the procedure.

In voting for the new labor contract, workers at the plant accepted a 30-percent rollback in wages in return for the stock ownership and production incentives.

Smith mentioned this wage cut in a speech last month on plant closings because of non-competitive high labor costs.

UAW Vice President Owen Bieber accused Smith of "not telling the whole story" and said the plant was closed basically because of a lack of demand for Clark-type bearings. He said the "competitive factor" was an afterthought and that by calling high labor costs the principal reason GM was reversing the factors involved in its decision.

GM has been very vocal in recent months about the high labor costs in the U. S. and has threatened to move jobs offshore if the costs are not brought down.

The buyout was financed through a $15 million mortgage, $10 million from GM for preferred, non-voting stock, $10 million from credit the company can draw on, $15 million in state and federal funds on which approval is still pending, and the balance from a GM note.

In addition, GM has agreed to purchase $200 million in bearings from the plant over the next three years.

More than half of the 800 employes at the facility voted on the ownership plan.

News roundup

Ford returns to Zimbabwe

WILLOWVALE, Zimbabwe. — After a 14-year absence, new Fords will be appearing on the roads in Zimbabwe (formerly Rhodesia). The Ford Laser is being assembled at a government agency plant here from kits supplied by Toyo Kogyo, in which Ford holds a 25-percent stake.

Lucas to supply GM diesel pumps

LONDON.—Lucas CAV, a division of Lucas Industries, Ltd., has been awarded a contract to supply General Motors with fuel injection pumps for its new V-6 diesel engine to be used on 1982 models. When pump deliveries begin later this year, CAV's manufacturing plant in Greenville, S. C., expects to supply a specially developed version of its DPA rotary pump at the rate of 800 a day. Initially, component parts for the pump will be shipped from CAV's plant in Medway, England, to Greenville for assembly, calibration and delivery to GM.

Aston Martin prices start at $96,000

NEW YORK.—Aston Martin prices for 1982 start at $96,000 for the V-8 coupe with automatic transmission; the five-speed version is $98,000. Other prices are: Vantage coupe (five-speed), $101,000; Volante convertible (automatic), $115,000; Volante convertible (five-speed), $117,000. Estimated price of the Lagonda four-door sedan, to be introduced next June, is $150,000. West Coast prices are $1,500 higher. Aston Martins are built in England at a rate of four a week. Sixty cars will be available in the U. S. for the year.

Reagan marks 25th anniversary of I-system

WASHINGTON.—President Reagan has proclaimed 1981 the Silver Anniversary Year of the Interstate Highway System. He called the 42,500-mile highway system "the largest public works construction program in world history." It was launched when President Eisenhower signed the 1956 Highway Act and is now more than 94 percent completed.

Strike ends at DDA Parts Center

DETROIT. — Members of UAW Local 483 ratified an agreement with Detroit Diesel Allison Division of General Motors last week, ending a week-long strike at the DDA Parts Distribution Center in nearby Romulus.

No stockpiling on Skylark

DETROIT.—Buick denied a report that it was pre-building Skylarks and warehousing them. Industry sources said last week the pre-building had been contemplated but it was decided that production should be curtailed instead. Willow Run, source for Skylark and Omega, is going down for three weeks, beginning today (Nov. 9) and will have a reduced line speed when it comes back. Tarrytown, another X-body (Citation/Phoenix/Skylark) plant, was down last week to curb inventory.

L-M fleet sales up 27 pct.

DETROIT.—Lincoln-Mercury Division said its dealers delivered 121,219 cars to fleet buyers in the '81 model year, up 27 percent over 95,529 in the '80 model year. The division said fleet sales rose 36 percent for Zephyr, 10 percent for Marquis and 8 percent for Lincoln. Cougar and Lynx also contributed to the sales gain, said Harold Barton, L-M leasing and fleet sales manager.

4,630 Jaguars recalled to replace fuel hoses

LEONIA, N. J.—Jaguar Rover Triumph, Inc., is recalling 4,630 Jaguar XJ-6 four-door sedans and XJ-S coupes for the installation of new under-hood fuel hoses to prevent possible fuel leakage. The cars are '80, '81 and '82 models. JRT said there could be a failure in the bond between the hose outer cover and the fabric reinforcement. This softens the material and reduces the effective clamping load of the attachment clips, which can lead to fuel leaks in the engine compartment.

McCurry leaves post with Mid-Atlantic Toyota

GLEN BURNIE, Md. — Robert McCurry stepped down Nov. 2 as executive vice president and chief operating officer for Mid-Atlantic Toyota, but will continue as consultant. McCurry joined the Toyota distributor after retiring as group vice president for U. S. Automotive Sales at Chrysler Corp. in 1978.

Season starts with 261 models

By John K. Teahen Jr.
Managing Editor

Moving into the 1982 selling season, domestic auto makers and their dealers were offering buyers a total of 261 models.

The next line in this report should be: "This compares with (number) available at the end of the 1981 model year."

For the record, the end-of-'81 count was 278, but the two figures are hardly comparable.

General Motors has chosen a Jan. 14 introduction date for six of its '82 car lines — apparently they weren't ready for the annual autumn rites. The latecomers are Chevrolet Camaro and Pontiac Firebird and the new front-wheel-drive intermediate-size A-cars — Chevrolet Celebrity, Pontiac 6000, Buick Century and Oldsmobile Cutlass Ciera.

Also on the future list are the Buick Skyhawk and the Oldsmobile Firenza J-cars which are slated to debut next spring.

The appearance of those entries will push the '82 model count near or above the end-of-'81 figure.

The current total of 261 consists of 99 for GM, 91 for Ford Motor Co., 42 for Chrysler Corp., 23 for American Motors and 6 for Volkswagen of America. The VWoA number includes only U. S.-built Rabbits.

At the end of the '81 campaign, the totals were: GM, 127; Ford Motor, 74; Chrysler Corp., 48; AMC, 23, and VWoA, 6.

• At GM, the year-to-year totals are not comparable because of the many lines still to come. GM has thinned out its carry-over rear-drive intermediates, and this has effected its model count. Also, the standard-size has been discontinued.

Ford Motor Co. revised the model lineups for most of its car lines and the result was a gain of 17 selections.

Four-door sedans were added for Ford Escort and Mercury Lynx, the Lincoln Continental was introduced and several Lincolns which were listed as option packages last year now have full-fledged model status.

Chrysler Corp. made models out of options for Omni/Horizon and TC3/024 and also added its new front-drive Chrysler LeBaron and Dodge 400 units. But the corporate total is down because of the departure of the rear-drive LeBaron and a reduction in choices for the Dodge Diplomat.

AMC and VWoA made no changes in their model lineups for 1982.

The Automotive News new-model analysis includes all models the domestic manufacturers are pricing and/or merchandising individually. It does not include engine options. For example, an Oldsmobile Delta 88 four-door sedan is one model even though it is available with a V-6 gas, a V-8 gas or a V-8 diesel engine.

• The 261 models currently offered are made up of 95 four-door sedans, 129 two-doors and 37 four-door station wagons. (The two-door total includes 43 hatchbacks which some makers list as three-door models.)

The final count for '81 was 87 four-doors, 141 two-doors and 50 four-door wagons.

The domestic makers now have 60 lines of cars, compared with 64 at the end of the '81 model year. There will be eight more for '82 when GM's late arrivals make the scene.

The 60 lines now on sale are made up of 24 from GM, 17 from Ford Motor, 14 from Chrysler Corp., four from AMC and one from VWoA.

New for '82 are Lincoln Continental and Dodge 400. Chrysler LeBaron is a new car, although it carries an '81 name. As noted, there are more new names coming from GM.

GM's J-cars and Ford EXP and Mercury Lynx were introduced as '82 models last spring, but they are included in the '81 coterie since they went on sale during the '81 model year. They may have been '82s, but their production and sales totals were logged in their companies' '81 results.

Some of last year's nameplates are missing, among them a pair of old-timers — Pontiac Catalina and Chrysler Newport. Both fell by the wayside when those manufacturers abandoned the standard-size field.

Catalina had been a Pontiac standby since 1959, and Chrysler had used the Newport tag since 1961.

Also gone is Pontiac LeMans, a name the division had used since 1964.

Conversely, three names were saved by putting them on smaller cars. Pontiac Bonneville, Chrysler New Yorker and Plymouth Gran Fury now are intermediates.

• The present crop of 261 models shows 74 subcompacts, 67 compacts, 52 intermediates, 40 standard-size cars and 28 luxury models.

At the end of the '81 model run, the figures were: 64 subcompacts, 73 compacts, 65 intermediates, 56 standard size and 20 luxury.

Although it has 40 models, the standard-size class now lists only five makes — Ford, Mercury, Buick, Chevrolet and Oldsmobile. Four of last year's entries are no longer listed in this category in the Automotive News ranking. Departing were Pontiac, Chrysler, Dodge and Plymouth.

1982 Totals	95	129	37	261	
1981 Totals (End of Model Year)	87	141	50		(278)

*—2-door, totals include hatchbacks, which some makers list as 3-door models.

**—Revised '81 totals.

***—Introduction date is Jan. 14, 1982, for the '82 Buick Century, Chevrolet Camaro and Celebrity, Oldsmobile Cutlass Ciera and Pontiac Firebird and 6000.

—The '82 Gran Fury and New Yorker are classified as intermediates. The '81 Gran Fury was the standard-size Plymouth. The '81 New Yorker was a standard-size Chrysler.

ELDORADO "GLAMOUR" COUPE

"Custom Built Limited Edition Series"

"American Custom Coachworks, Ltd. is very proud of their custom concept on the popular "4" passenger Eldorado Coupe. The "Glamour" Coupes are selling very fast and very well for dealers throughout the country. Base units can be drop shipped by the dealer to one of our manufacturing plants, or some open factory (pool cars) presently in build can be made available."

Car buyers play it cool

By Joseph Bohn
Marketing Editor

Car buyers may be cutting back on some of their optional equipment, but they retained a strong desire to keep cool, a survey of air conditioning units in '81 models reveals.

The penetration of air conditioners on '81 models reached 76.75 percent, up from 72.52 percent the previous year.

Altogether, 5,186,776 air conditioners were installed against 5,181,365 the previous year.

General Motors continued to lead the parade. It installed "air" in 83.90 percent of its cars, up from 77.03 percent in '80.

Of course, GM has made the item standard in a number of lines, including all Cadillacs, Riviera, Toronado, Corvette, Buick and Oldsmobile 98.

Ford Motor's penetration climbed to 71.22 percent from 70.23 percent the previous year. Ford installed air conditioners in 1,071,117 cars, up from 964,613 the previous year.

Chrysler's installations dropped both on a percentage and volume basis. Chrysler installed air conditioners in 427,736 or 58.31 percent of its cars. That was off from 489,092, or 63.91 percent in '80.

American Motors installed the option in 73,184 cars, equal to 53.37 percent of production. That was off from 103,848, or 52.02 percent in '80.

Volkswagen installed the item in 86,933 U. S. Rabbits, equal to 48.40 percent. That was up from 41.00 percent in '80, but off from the previous year's volume of 91,539.

In the '81 model year, GM accounted for 68.01 percent of installations; Ford for 20.65 percent; Chrysler for 8.25 percent, VW for 1.67 percent and AMC for 1.42 percent.

Total Cars, U. S.	5,186,776	76.75	100.00	5,181,365	72.52	100.00

Note: Figures are generally based on U. S. production. However, Canadian-only sourced cars, such as Cordoba/Mirada, are included in some instances; also, some '82-only models, such as EXP/LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,513 Chrysler models, 137,125 AMC and 179,635 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,673,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouths and 311,988 Dodges.

October sales lowest since 1958

Continued from Page 8

cent, Cadillac was up 2.29 percent and Plymouth was up 1.34 percent.

The less fortunate were: Imperial, down 78.84 percent; Chrysler, down 57.58 percent; Chevrolet, down 36.29 percent; Pontiac, down 34.23 percent; Ford, down 27.14 percent; Oldsmobile, down 26.72 percent; Buick, down 23.89 percent; Mercury, down 23.35 percent; AMC, down 21.01 percent; Lincoln, down 13.70 percent, and Dodge, down 13.65 percent.

• Top domestic nameplates in October were headed by Ford Escort at 24,138, followed by Oldsmobile Cutlass Supreme at 20,986, Chevrolet Citation at 20,924, standard Chevrolet at 18,930 and Plymouth Reliant at 18,766.

The top five in October of 1980 were: Chevrolet Chevette, Citation, Cutlass Supreme, Ford Fairmont and Chevrolet Malibu.

The domestic daily rate for the 27 selling days in the month averaged 18,189, down 26.02 percent from 24,587 in 1980.

Softer import sales in October were affected by drops in Datsun, Honda and Mazda totals, while Toyota was up 7.56 percent from 1980 and Subaru reported an 11.72-percent gain. Datsun sales plunged 11.64 percent, Honda was down 23.90 percent and Mazda was off 27.19 percent.

Mercedes-Benz sales climbed 14.68 percent in October, compared with last year, while competitor BMW was down 10.75 percent, Audi was down 10.16 percent and Volvo was down 18.51 percent. Peugeot reported record October sales of 1,769. It was Peugeot's sixth record month this year.

The market class breakout for October was as follows: Imports, 24.23 percent; intermediates, 21.79; compacts, 19.98 percent; subcompacts, 17.58 percent; standards, 10.34 percent, and luxury models, 6.08 percent.

Oct. 21-31 domestic sales totaled 195,551, down 18.33 percent from 239,449 last year. GM was down 23.79 percent, Ford was off 15.04 percent, Chrysler was down 0.95 percent, AMC was down an estimated 33.33 percent, while VWoA shot ahead 51.35 percent.

The third-period domestic daily selling rate was 19,555, down 18.33 percent from 23,945. There were 10 days this year and last.

Ford wins another round of work-rule concessions

DETROIT. — Ford Motor Co. has won another round of work-rule concessions from plant workers at the Rawsonville (Mich.) parts plant.

In addition, 3,200 employes at the company's Sterling axle plant in Sterling Heights (Mich.) were to vote yesterday on work rule changes geared toward making it more competitive and perhaps entice Ford to give the plant work on components parts of the new automatic overdrive transaxle (AXOD).

The Livonia transmission plant made similar changes in late October in an effort to get Ford to give it the AXOD job. Sterling would be a sub-assembly plant for the project. Ford's board of directors is scheduled to consider sourcing for the AXOD work at this Thursday's meeting.

The 2,450 employes at the Rawsonville plant agreed to work rule changes to get a job building a new-type carburetor.

None of the changes affect the wages or benefits and are strictly modifications in scheduling, overtime, work conditions and others. There is also a great emphasis being placed on further reductions in the absenteeism rate — already down by as much as 50 percent in some plants, according to Peter J. Pestillo, Ford vice president, labor relations.

Workers at Ford's Monroe chassis plant accepted changes in work rules last September.

However, while the plants seem to be going along with these type of revisions, Ford's bid to reduce wages and benefits by 50 percent at the Sheffield (Ala.) aluminum casting plant was soundly rejected. The plant employs 940 who may now lose their jobs since Ford has said it will probably close the facility as a result.

GM delays a year on opening of 'Poletown' plant

DETROIT. — General Motors has postponed the opening of its $700-million Hamtramck GMAD assembly plant for one year.

The 'Poletown' plant will now come on stream in 1984 instead of the 1983 date originally planned, building 1985 models.

A GM spokesman said the company is continuing to construct the plant on the same basic timetable and changes in the product line are responsible for the date change. The Hamtramck plant replaces the current Detroit Cadillac assembly plant and was to build front-wheel-drive luxury cars.

GM has already dropped its option on a proposed $500-million Kansas City (Kans.) plant and has let the option lapse on a proposed site for a plant outside Flint. Also, the completion of a $230-million renovation program at the Baltimore facility has been delayed.

Last spring GM announced the construction of the new Orion Township (Mich.) assembly plant and the Wentzville (Mo.) plants would also be delayed for one year, opening in 1983 instead of the originally scheduled 1982. Orion replaces the Pontiac assembly plant and Wentzville replaces the St. Louis facility.

A GM spokesman said the plants were slowed down to save money and because poor weather last winter hurt the construction schedule.

Chevy signs Rentschler

SLATINGTON, Pa.—Frederick Rentschler has been named the Chevrolet dealer here.

534,832 cars built, slimmest total since 1970 GM strike

October output sinks to 11-year low

By Patricia Hoffman
Staff Writer

U. S. auto production in October was the lowest for the month since 1970 when General Motors was out of action for the entire month because of a strike.

The auto makers completed 534,832 units last month, down 20.77 percent from 675,001 in the comparable month last year, and the lowest total for October since 1970's 390,016.

Breakdown for the month by company is: General Motors, 59.07 percent; Ford Motor, 23.11 percent; Chrysler Corp., 12.60 percent; Volkswagen of America, 3.40 percent; American Motors, 1.74 percent and Checker Motors, 0.08 percent.

Last week's auto production was scheduled at 115,796 units, down 1.97 percent from 118,117 in the previous week, and down a substantial 26.43 percent from 157,394 in the comparable 1980 week.

Breakdown for the week by company is: GM, 76.87 percent; Chrysler, 10.02 percent; Ford, 9.47 percent; VWoA, 3.55 percent and Checker, 0.09 percent.

AMC's Kenosha assembly point was idle last week for inventory adjustment. The plant is slated to resume production today (Nov. 9).

Also down last week for inventory control were the second shifts at GM's Tarrytown and Willow Run facilities. Tarrytown is slated to resume production today, and Willow Run is scheduled to remain idle until Nov. 23.

Saturday overtime was scheduled last week at GM's Flint and Arlington plants.

Chrysler's Belvidere assembly point, idle since Oct. 26 to prepare for the addition of front-wheel-drive pick-up truck production there, will remain down until Nov. 16.

Chrysler seeks to upset Idaho's warranty-pay law

BOISE, Id. — Chrysler Corp. has filed a suit challenging the constitutionality of Idaho's recently passed warranty repayment law, according to Bob Henderlider, executive vice president, Idaho Automobile Dealers Assn.

The law took effect July 1. It stipulates (Automotive News, June 8) that auto manufacturers must compensate Idaho dealers for warranty-covered repairs and service on customers' vehicles at the same rate as for work not covered by warranty.

Kenneth McClure, Idaho assistant attorney general said no briefs have been filed. He said he does not expect the case to come to trial before February.

He said the outcome of the case, and final judgment, probably would not be known until late next year.

Chevrolet for Ward

QUINCY, Ill.—E. Buford Ward has opened Buford Ward Chevrolet, Inc., here.

Auto output in Canada falls to 14-year low for October

Canadian auto production in October was the lowest for the month in 14 years, and the total fell 32.66 percent below the comparable month last year as a result of extended changeover schedules.

The auto makers completed 59,483 units in October, down from 88,333 last year, and the lowest output for the month since 1967 when only 57,509 cars were assembled.

Truck production totaled 42,685 units in October, a drop of 23.70 percent from 55,943 in the comparable 1980 month, and the lowest output for October since the 1976 total of 33,325.

Last week's car production was estimated at 14,923 units, down 2.20 percent from 15,258 in the previous week, and a 30.76 percent decline from 21,554 in the comparable 1980 week.

Year-to-date car output is 693,480 units, down 2.70 percent from 712,751 in the comparable period last year.

Truck production last week was targeted at 8,065 units, down 23.52 percent from 10,545 the previous week and down 40.87 percent from 13,640 in the comparable 1980 week.

Downtime was scheduled last week for the second shift at General Motors' Oakville car assembly point.

Also down last week at GM was the Oshawa (No. 2) car facility. The plant, idle since Aug. 6 for changeover, is slated to resume production tomorrow (Nov. 10), due to downtime at all Canadian assembly points Monday, Nov. 9 in observance of the Rememberance Day holiday.

Ford Motor's St. Thomas car plant, idle since Aug. 31 for changeover/inventory control, is slated to resume production today.

Ford Motor's Ontario truck facility is scheduled to resume operations today. The plant was idle last week for inventory adjustment.

According to Chrysler Canada, tentative plans have been made to return to two-shift operations at the Windsor car facility due to an upturn in sales of the '82 New Yorker. The plant, which added a second shift last June 1, dropped to one-shift operations Oct. 12, decreasing line speed from 560 per day on two shifts, to 400 per day on one shift.

The second shift is slated to return Nov. 30 with line speed being upped to an estimated 600 units per day.

Also at Chrysler, Saturday overtime was scheduled last week at the Windsor car plant for the first time in over a year.

Truck production for October is lowest since 1970

Domestic truck production in October was the lowest output for the month since 1970, and the total fell 17.99 percent below the comparable 1980 month.

The truck makers completed 147,531 units last month, down from 179,888 in October of last year, and the lowest total for the month since 1970 when only 108,344 were built. General Motors was idle the entire month in 1970 because of a strike.

Last week's truck production was targeted at 27,101 units, down 18.86 percent from 33,399 in the previous week, and down 36.95 percent from 42,983 in the comparable week last year.

International Harvester's Ft. Wayne and Springfield assembly points both idled for inventory control since Oct. 26, will resume operations today (Nov. 9).

Also slated to return today is American Motors' Toledo (Jeep) facility. The point was idle last week for inventory adjustments.

Ford Motor's Norfolk facility, also idle last week for inventory control, is scheduled to resume today.

Chrysler Corp.'s Belvidere (car) assembly point will remain idle this week as the facility continues to undergo conversion for the addition of the company's front-wheel-drive pickups. The point closed Oct. 26 and is slated to return Nov. 16 with assembly of both cars and pickups.

57th year—$40 per year, $1.00 per copy

Set for the city

New Honda car and bike

New Japanese small car, the Honda City, stole the limelight at the Tokyo Motor Show. The car is only 133 inches long—yet it has room to hold a 50-cc moped behind the rear seats. The City weighs 1,440-1,500 pounds, thanks to its aluminum engine, lightweight plastic panels and plastic bumpers. The 1.2-liter engine is rated at 67 horsepower. The Honda moped, below, folds easily for storage inside the car. Tokyo Motor Show story and pictures, Page 4.

81½-day supply on hand

Stocks soar to a record

By Richard Wright
Assistant Managing Editor

The domestic new-car inventory reached an 81½-day supply Nov. 1, the highest ever for that date.

Historically, the inventory has not been particularly heavy on Nov. 1, usually around 50 days, because a full month of new-model sales has beefed up the daily selling rate. But this year, the sales pace is about as hot as it usually is in the dead of winter.

The domestic new-car inventory totaled 1,480,768 Nov. 1, compared with 1,389,549 a year earlier, which was a 56½-day supply.

A little more than a third of the Nov. 1 stockpile was made up of carryover '81 models.

• Compared with a month earlier, only Chrysler Corp. managed to trim its inventory, both in terms of days supply and unit count. Chrysler had a 91-day stockpile on Nov. 1, down from 95 days a month earlier.

Ford Motor Co. boosted its inventory during October from 79 to 91 days, while General Motors built up its stockpile from 62 days to 77 days. GM's inventory included about 13,000 new front-drive A-body cars, not yet on sale.

American Motors opened November with an 87-day supply, up from 60 days, and Volkswagen of America had a 66-day supply of U. S.-built Rabbits, up from 61 days.

The Nov. 1 domestic inventory was divided this way: GM, 56.71 percent; Ford Motor Co., 25.74 percent; Chrysler Corp., 12.95 percent; VWoA, 2.51 percent, and AMC, 2.09 percent.

A month earlier, the domestic inventory was divided as follows: GM, 56.64 percent; Ford Motor Co., 26.00 percent; Chrysler Corp., 12.85 percent; VWoA, 2.45 percent, and AMC, 2.06 percent.

By size class, all segments except luxury cars increased their inventories during the month. The industry had a 58-day supply of luxury cars Nov. 1, compared with a 64-day stockpile a month earlier.

Subcompacts were in the heaviest supply of any segment at 103 days, up from 78 days a month earlier. The industry had an 84-day supply of compacts, up from 80 days.

The industry had a 75-day

Long Chevrolet owes it $8.7 million, finance firm charges

GMAC suit shuts large Chicago deal

By Nancy I. Phillips
Staff Correspondent

ELMHURST, Ill.—Long Chevrolet, one of Chevrolet's largest dealers, has closed its doors following a General Motors Acceptance Corp. suit filed in federal district court in Chicago seeking $8.7 million.

James Long, owner, surrendered his entire inventory of new and used vehicles to GMAC representatives last Tuesday night (Nov. 10). The dealership closed the following day.

The GMAC lawsuit was a typical "out of trust" suit, charging that Long Chevrolet "wrongfully detained" vehicles, parts and accessories financed by the General Motors subsidiary.

The complaint said that on Nov. 5 Long Chevrolet had refused to surrender the vehicles, parts and inventories.

Long often had 1,500 to 2,000 cars and trucks at his Grand Ave. lot in this western suburb of Chicago. He advertised his large stock to retail customers in the local media and until last April he often advertised his inventory surpluses to other dealers in the classified advertising section of AUTOMOTIVE NEWS.

In an exclusive interview with the Chicago Tribune, Long said he had been investigating embezzlement amounting to "many millions" since June. He said he didn't know if the deficit was from within the company or without. He said he suspected that someone ordered cars in his name and had them delivered elsewhere.

John Cresto, DuPage County state attorney's investigator, said former Long Chevrolet finance manager James Elza was indicted on charges of theft of $700,000 some two months ago, following a grand jury investigation.

Long could not be reached by AUTOMOTIVE NEWS for comment before press time. However, he told the embezzlement story to a local television news crew, as well as in the Tribune interview.

"When we discovered the cash deficit in June, I requested an emergency loan from GMAC while the audit was going on," he told the Tribune. "For some reason they decided to stop the funding and decided to pull my cars."

"I asked them to wait until I could call (GM President) Jim

Honda, BL plan new luxury auto

By Richard Feast
European Editor

LONDON. — Honda and BL signed a letter of intent late last week to join together in developing and building an upscale auto that will be sold throughout Europe, Japan and North America in 1985.

In contrast to the earlier Ballade/Acclaim joint venture, the new deal clearly calls for large-scale output. Although production numbers were undecided at press time, the agreement calls

April decision due on GM P-car

DETROIT.—Next April, General Motors will make a firm go/no-go decision on production of its P-car, a slick subcompact that could bow in the fall of '83 as an '84 model. Design and engineering work on the car is well advanced. Market studies are in hand. The decision will be made solely on the basis of GM's cash position at the time, AUTOMOTIVE NEWS learned.

Wankel licenses Holley on new blower

TROY, Mich.—Wankel GmbH has granted a license to Holley Special Products Division of Colt Industries for the commercialization of a new type of blower developed at the Wankel Laboratory in Lindau, West Germany. Holley will carry out the production engineering of the blower and, if

Will focus on conditions, changes

U. S.-Japanese group to study auto problems

By Jim Plegue
Staff Writer

DETROIT. — Problems facing the U. S. and Japanese auto industries will be explored over the next two years by an automotive think-tank comprised of executives and scholars from both countries.

The joint "United States-Japan Automotive Study Group" was announced last week by Prof. Robert E. Cole, director of the University of Michigan Center for Japanese Studies, and Keishi Oshima, professor-emeritus of the University of Tokyo and vice chairman of Technova, Inc., a Tokyo research firm.

"This is not a PR effort but a serious scholarly investigation of the conditions and changes that are taking place," Cole said.

The study is expected to cost $600,000 per year for two years and will be funded equally by donations from sources in each country's auto industry. All of the Japanese and over half of the U. S. portion of the first year's funding has been committed, Cole said. Other U. S. contributions are expected soon, he said.

• General Motors and Ford Motor Co., the UAW and several U. S. supplier firms are among the U. S. sponsors. Toyota and Nissan and several supplier firms are the major Japanese sponsors. Cole said American Motors, Volkswagen of America and Chrysler Corp. have been contacted "and we'll just have to see how it plays out."

"Actually, I'm rather heartened by the response, given the rather difficult conditions of the U. S. auto industry," he said.

The study group will be comprised of a 20-member policy committee, with membership divided equally between the two countries. Robert Ingersoll, former U. S. ambassador to Japan, will chair the U. S. members, while Minoru Toyoda, chairman of Technova, will lead the Japanese delegation.

The group will make interim public reports "on selected areas," Cole said, as well as develop policy options and recommendations based on research conducted by a second technical committee chaired by Oshima and Paul W. McCracken, professor of business at the University of Michigan.

The group will focus on technological changes in each industry and the effects of internationalization.

• "Internationalization of the auto industry is accelerating," said Oshima. "Two-way investment is increasing each year. Technology transfers between our two countries are now so great that the survival of one country's industry depends on the survival of the other. Japan cannot have a healthy automotive industry if the United States continues to suffer declines in its industry."

Cole said he did not have funding commitments yet for the second year of the program.

Among the U. S. members of the policy board are William Larson, director, Worldwide Product Planning, General Motors; Fred Secrest, consultant, Ford Motor Co., and Donald Ephlin, vice president, UAW.

Among the Japanese members are Shoichiro Toyoda, president, and Shigenobu Yamamoto, vice president, Toyota Motor Co., Ltd., and Yoshihisa Yokoyama, vice president, Nissan Motor Co., Ltd.

Quality changes on '82 models valued at $126

WASHINGTON. — The value of quality changes for 1982 domestic models included in the government's Producer Index averaged $104.70 at the manufacturer level and $126.32 at retail, according to estimates made by the Bureau of Labor Statistics.

These quality changes, representing about 22.5 percent of the average increase of $562.54 in list prices and about the same percentage of the average rise of $463.61 in wholesale prices, come from a review made by BLS of data supplied by the companies for similarly equipped '81 and '82 models. Of the 17 domestic cars used in the Index, the companies gave quality changes for 16. Of those 16, 15 are used in the Consumer Price Index.

The $126.32 estimated retail value of the quality changes breaks down into $84.68 for improvements in fuel economy and to reduce emissions in line with current and anticipated federal standards and $41.64 for changes for better corrosion protection and for standard equipment additions or deletions. No specific changes were attributed to NHTSA safety standards.

When Metro met Aston Martin

Tickford, the engineering department of Aston Martin in England, introduced a special luxury version of the BL Metro at the London Motorfair. The car, known as the Frazer Tickford, will be made at the rate of five a week. Selling price is about $21,500, three times the price of the basic Metro in its country of origin.

'82 contract talks start at Delco-Remy unit

By Marjorie Sorge
Labor Editor

General Motors' Delco-Remy Division and its UAW local have begun negotiating a new 1982 contract a year before traditional local bargaining begins and 10 months before the national agreement expires.

The talks at the Anderson (Ind.) facility began last Monday (Nov. 9) and are the first early-bird negotiations announced by GM. Both the union and the company said the early talks are to cooperate and help the auto industry meet the challenges it currently faces and make it competitive.

Normally, local bargaining begins after the national agreement is ratified. Delco Remy's 1979 local agreement was negotiated in November, after GM's national pact was ratified. The national contract expires Sept. 14, 1982.

A GM spokesman said no information is available yet on whether the new Delco-Remy contract will have concessions similar to those recently won at four Ford Motor Co. plants. Those concessions involved changes in work rules.

GM has said it is not going to go to the locals to reopen the current contract for concessions. It has not, however, eliminated the possibility of early negotiations on a new 1982 contract.

According to a Delco-Remy spokesman, current bargaining pertains only to those items negotiated in the local agreement, not those in the national contract like wages and benefits.

The early talks are not to be part of a reopening of a national agreement which both Ford and GM have been pushing during the past year.

In a joint statement on the early talks, Bill Haston, Local 662 shop committee chairman, and Earl Jank, Delco-Remy personnel director, said:

"Although our local contract does not expire until Sept. 15, 1982, we feel it is important to demonstrate our spirit of cooperation and optimism for the future of Delco-Remy.

"We are facing challenges never before experienced in the history of the domestic automobile industry, and we plan to do everything we can to arrive at a local agreement in the very near future.

"Such an accomplishment will prove our determination to be competitive and to continue supplying quality products as one of the finest divisions in General Motors."

The statement also said neither party would have any further comment until bargaining is over.

Buy a dealer's house, get a Chevy Caprice

ST. LOUIS.—Taking a cue from General Motors, longtime Chevrolet dealer Johnny Londoff is selling his house in suburban Belleriver Acres and throwing in "a fully equipped four-door 1982 Caprice Classic." Meanwhile, builder Lester Katz is giving away a "brand new 1981 automobile" with the purchase of a two-bedroom condominium in suburban Creve Coeur.

Purchase plant or see it shut, Ford crews in Sheffield told

By Marjorie Sorge
Labor Editor

The 940 production workers at Ford Motor Corp.'s Sheffield (Ala.) Aluminum Casting plant have until Nov. 23 to decide if they are going to buy the operation or see it closed.

Since the workers have already rejected a Ford overture to cut wages and benefits by a total of 50 percent, they are now faced with the possibility of buying the plant under an Employe Stock Ownership Plan (ESOP) rather than see it closed. Ford said the closing is definite if the employes do not buy the factory.

It is not known yet which way the local will swing. It has requested more information on an ESOP and on pension alternatives from Ford. And, Ford, in return, has extended a previous Nov. 15 deadline to Nov. 23 to provide the needed information.

If the production workers should vote down a buyout, it is possible the 166 salaried workers, plus some hourly employes, could elect to buy the Sheffield plant.

A Ford spokesman said the company would consider this option but would rather see the buyout decision come from the production workers who would then show they finally believe they must sacrifice to keep their jobs.

Even if there is a buyout, Ford officials are advising workers at Sheffield they still feel there is a need for a 50 percent wage and benefit cut, although Ford would have little say in cuts after the plant was purchased.

Ford said the buyout would be similar to the recent ESOP at the General Motors New Departure-Hyatt Bearings plant in Clark, N.J. There, the workers took a 30-percent wage cut in return for stock ownership and production incentives.

The workers at Sheffield also

Year of exams reveals elevated rate of colon/rectal cancer

GM finds more woodshop cancer

By Kathleen Hamilton
News Editor

DETROIT. — The first round of screening of General Motors' woodshop workers found 26 new cancer cases and an incidence of colon/rectal cancer nearly three times the normal rate.

In reporting results of the year-long testing of 5,000 employes, GM Director of Occupational Safety and Health, Robert G. Wienceck said the firm suspects the problem is not in the workplace but in such factors as lifestyle, diet or heredity.

Colon and rectal cancers rarely have been linked to workplace causes, he said. In the latest study, woodworkers had 2.86 times the rate expected in Detroit.

And Doctor Victor M. Hawthorne, chairman of the University of Michigan School of Public Health, who analyzed the data for GM, pointed out that if dust were causing the cancers, high rates of nasal or lung cancers would be expected. Yet, the GM woodworkers had unusually low lung cancer rates.

In a prepared statement, UAW Vice President Owen Bieber said the union is "greatly concerned by the findings."

"Although GM's study calls this a 'preliminary' conclusion, we find it alarming," Bieber said. "It obviously necessitates an allout effort to pursue this

Fiat recall drags on and on

How Honda handles rust problems

WASHINGTON. — The recent voluntary recall by American Honda of all Honda pre-1980 models sold in the U. S. and Canada invites comparison with the way Fiat has handled a very similar safety-related problem of rust in underbody areas that could affect structural elements.

The most amazing fact is that, as of this writing, letters to owners of 1971-74 Fiat 124s have not yet been sent because government and company lawyers are still arguing over how far from attachment bolts rust must extend before Fiat is willing to fix the problem or if necessary, buy back the cars.

Meanwhile, fewer than half those cars may still be on the road and each winter month, especially in salt-belt areas, rust gets worse and the hazards to wheels, suspension components, steering component and the floor pan (which holds both seats and seat belt attachments) gets greater.

Also highlighted is the voluntary actions taken by Honda and the litigation which Fiat mounted to resist recall of the 124s.

NHTSA opened an investigation of Fiat rust and related safety problems in August, 1977, on the basis of 71 consumer complaints. Tentatively involved were 1970-74 Fiat 850s, 128s and 124s. The 128s were dropped from the investigation because of an earlier recall.

By January, 1979, NHTSA made an initial findings of safety-related defect in Fiat 124s, and 850s for 1970-74 models.

• In March, 1979, under pressure from NHTSA, Fiat recalled 31,702 850 Spyders of 1970-71 vintage. At a NHTSA hearing in October, 1979, NHTSA was critical of Fiat for not offering enough money to Spyder owners in its buy-back program and NHTSA restated its determination for a Fiat recall for 1970-74 Fiat 124s.

In January, 1980, NHTSA announced its final determination of a safety-related defect but could mandate a recall of only 1971-74 Fiat 124s because the statute of limitations had expired for 1970 models.

In July, 1981, the federal district court in the District of Columbia thought it had settled the matter with a negotiaed settlement between the government and Fiat. But not so. Arguments over the extent of rust damage still are being worked out. NHTSA officials informally estimate that about 65,000 of the original 140,000 124s are still on the road and the owners of the 1970 Fiat 124s are out of luck.

In the case of Honda, no injuries have been reported from rust problems and at the time American Honda delivered its notice of recall to NHTSA, the government had only eight consumer complaints. but was looking at rust because it had been informed of a rust problem in three provinces in Canada.

• The Canadian recall, initiated by Honda, started American Honda on a survey of its American cars within a month, in January, 1981. The survey was completed by the end of October, 1981, and within two days Honday decided it had a problem and three days later Honda told NHTSA it was recalling all pre-1980 Hondas.

But because cars are resold—and are highly mobile — Honda decided to inspect all 936,774 vehicles it had sold before it changed to epoxy resin paint with the 1980 models. The inspection alone will cost Honda about $15 a car, but Honda expects that only about 2 percent of the cars will have sufficient rust problem to require a fix. Partial fix can be done by cleaning and repainting suspension arms. In some cases, replacement may be in order.

GMAC suit shuts Long Chevrolet

Continued from Page 1

McDonald to find out from him if GM really wanted to dump me, but GMAC didn't wait." Long said.

Long said the $8.7 million amount was not verified and that GMAC had recovered some $6 or $7 million in the vehicles it repossessed.

One source in the Chicago business community said he believes the matter will not be quickly resolved.

"I'm sure we haven't heerd the last of this," he said. "There will be reverberations for some time to come. This is more than just a problem caused by an over-extended fleet leasing business or high interest rates."

Said another observer: "It seems like GMAC will have to get its own house in order, too, for having let the matter get this far out of hand."

Nov. 1 domestic stockpile hits record 81½-day level

Continued from Page 1

stock of intermediates, up from 60 days a month earlier, while standards were in 64½-day supply, up from 54 days.

The Nov. 1 inventory was divided this way by size segment: Subcompact, 29.68 percent; compact, 26.70 percent; intermediate, 26.47 percent; standard, 11.43 percent; and luxury, 5.72 percent.

A month earlier, the inventory was divided as follows: Subcompact, 27.86 percent; compact, 29.74 percent; intermediate, 24.90 percent; standard, 11.15 percent, and luxury, 6.35 percent.

• The Nov. 1 days-supply figures by market class were:

Subcompact—Rabbit, 66; Cavalier, 77; J2000, 79; Lynx, 99; Dodge 024, 102; Escort, 105; Eagle SX/4, 108; Plymouth TC3, 112; Chevette, 116; Horizon, 130½; EXP, 134; Spirit, 138½; Omni, 149; LN7, 153, and T1000, 164.

Compact—Reliant, 62; Omega, 70; Aries, 73; Concord, 75; Skylark, 77; Camaro, 79; Eagle, 80; Zephyr, 82; Firebird, 82; Fairmont, 88; Mustang, 83; Capri, 99; Citation, 109, and Phoenix, 111.

Intermediate—LeBaron K, 15; New Yorker, 43; Cutlass, 48½; Cougar, 54; Supreme, 64; Regal four-door, 65; Gran Fury, 68; Regal two-door, 74; Malibu, 74; Grand Prix, 74; Diplomat, 75; Granada, 75; Cordoba, 80; Bonneville/LeMans, 80; Monte Carlo, 82; Dodge 400, 87; Mirada, 103½; Thunderbird, 104; XR-7, 115, and LeBaron, 256.

Standard — Olds 88, 42; Pontiac, 53; LeSabre, 57; Olds 98, 59; Mercury, 65; Electra, 71; Chevrolet, 80, and Ford, 81.

Luxury—Eldorado, 47; Cadillac, 48½; Lincoln, 49; Toronado, 53; Riviera, 58½; Mark VI, 59; Continental, 70; Seville, 73; Corvette, 84; Cimarron, 98, and Imperial, 161.

J. Cavendish Darrell

RUXTON, Md.—J. Cavendish Darrell, who was instrumental in expanding the Baltimore dealer group into the Automobile Trade Assn. of Maryland, died Oct. 20 after a long illness. Mr. Darrell was executive vice president of the group from 1945 to 1975. He played a prominent role in auto lawmaking in the state during that time.

Memorial contributions may be made to St. Paul's School, 11152 Falls Rd., Brooklandville, Md. 21022.

GM cancer exams find 26 cases in wood shops

Continued from Page 3

matter vigorously and speedily."

GM so far has analyzed only data on the colon/rectal cancers because unusually high rates of these cancers among woodworkers were reported in three earlier studies, by the Michigan Cancer Foundation, the National Institute for Occupational Safety and Health and Memorial Sloan-Kettering Cancer Center.

Of the 26 new cancers, nine were colon/rectal. Ten were skin cancers.

The earlier Michigan Cancer Foundation study reported another 39 GM woodworkers with cancer.

Dr. Wiencek said the thorough testing of GM woodworkers for cancer probably skewed the results: Some of the cancers probably would have gone undetected for another two or three years, he said.

Wiencek estimated GM spent $1.3 million in the first year of its investigation of the link between cancer and woodworkers and expects to spend a similar amount in the second year of the two-year study.

A decision will be made after the second screening of employes whether to extend the tests, he said.

Meanwhile, Ford Motor Co. has completed screening 150 woodworkers and has begun tests for metal workers and those in research and engineering.

A Ford spokesman said the company is not prepared to release any results.

Chrysler Corp. has also completed physicals for all its model-shop workers—less than 200 workers at its Highland Park facility. It is still analyzing the data, a company spokesman said.

'That ain't no bull,' Tex

Tex Earnhardt, right, owner of Earnhardt Ford, Tempe, Ariz., receives a plaque commemorating 30 years of business with Valley National Bank of Arizona from Derald Hinds, left, and Tom Jacobs, bank vice presidents. The local high school band led the ceremony, marching into the showroom behind a sign bearing the dealership's slogan, "And that ain't no bull." Earnhardt was a speaker at the 1981 Automotive News World Congress.

Buy plant or see it closed, Ford's Sheffield crews told

Continued from Page 3

would be asked to take initial concessions in wages and benefits, but would get stock ownership and a share of the profits in return.

At the Clark operation, GM also guaranteed the purchase of $300 million in bearings from the plant over the next three years, and GM has put up $10 million for preferred, non-voting stock.

According to a Ford spokesman, before any of the actual buyout arrangements are made the local must show interest in the purchase, but he said, it is likely Ford would guarantee a certain amount of work.

If the workers decide against buying the plant, Ford will start immediate sourcing from outside suppliers. Tools will be removed beginning next month, with the entire plant closing within 16 months. Most of the business leaving Sheffield would be sourced in the U. S., a spokesman said.

If the phaseout should begin, 171 workers would be out by March, 1982.

By Jan. 1, 1982, 36 percent of the C-5 transmission extension would be sourced outside; by Jan. 15, 100 percent of the large C-6 transmission case and 62 percent of the small C-6 transmission case; by Feb. 1, 100 percent of the C-6 transmission extension, and by March 1, 88 percent of the automatic overdrive transmission case.

• While the International UAW has said it is against the constitution for a local to accept wage concessions, a spokesman said the buyout would be strictly up to the workers.

The UAW had, however, considered Ford's attempt to get the Sheffield workers to agree to wage concessions as a backdoor effort to reopen the national agreement since all UAW-Ford members who voted on the 1979 pact would have to approve the concessions.

But, Peter J. Pestillo, Ford's vice president, labor relations, said "that's silly." He said each set of concessions was decided by the needs of specific plants not in an effort to reopen national negotiations. He said Sheffield is "an isolated incident" and he does not anticipate asking any other plants for similar wage and benefit concessions.

One Ford proposal called for a 30-percent cut in wages, reducing the hourly rate from $10.39 to $7.32 and the weekly rate from $415.60 to $292.80.

Other cuts included eliminating COLA and the Supplemental Unemployment Benefit fund and reducing shift/overtime premium and paid time off. Also, health and life insurance plans would be reduced and dental, vision and hearing aid coverage would be eliminated.

The Sheffield plant has lost money every year since 1974, Ford said. It said wages and benefits are significantly higher than competitive firms, and combined with contractural work rules, they are causing the plant to lose $3 million a month.

The Sheffield area has a 12 percent unemployment rate.

Japanese see link in cancer, diesel fumes

TOKYO. — Scientists from the Japan National Cancer Institute reported last week that diesel exhaust may be responsible for the increasing number of cases of lung cancer in Tokyo and other large Japanese cities.

Approximately 10 percent of Japan's 39 million vehicles are diesel powered. One in four trucks uses the engine.

Diesel emissions have been shown to be carcinogenic in animals and are suspected of being carcinogenic in humans, but thus far no concrete evidence to this effect has been shown.

In the U.S., the EPA is in the final stages of its diesel exhaust assessment, but final results are not expected for another year or so.

It should be noted, however, that traffic density in Japanese cities like Tokyo, Osaka and Kobe far exceeds that of most U. S. and European cities. This phenomenon would weigh heavily in any risk assessment of the cancer potential of diesel emissions.

The Japanese Environmental Agency says further studies will be needed before the government would move to regulate diesels.

'82 model year opens with dip in retail sales

Retail sales of new trucks of all types in the U. S. in October, the first month of the 1982 model year, were down 11.6 percent from a year ago, according to preliminary factory reports.

During the month, franchised dealers and factory outlets retailed an estimated 173,116 units, compared with 195,865 in the same period a year ago. Sales were down from 1980 in all market segments.

The 10-month total of 1,951,533 units was off 8.9 percent from the 2,142,986 trucks sold in the comparable period a year ago. Again, there were declines in all market segments.

Light-truck sales in October totaled 154,625 units, down 9.8 percent from the 171,500 retailed a year ago in the first month of the 1981 model year.

Sales of compact pickup trucks in October, both domestic and imported, dropped 4 percent below the year-ago mark, from 35,908 to 34,461.

However, the non-captive imports — Toyota, Datsun, Mazda and Isuzu—were up 35.4 percent during the month to 19,416 units, compared with 14,342 a year ago when the increase in the import duty from 4 to 25 percent had its first major impact.

• On the other hand, October sales of the captive imports — Ford Courier, Chevrolet LUV, Dodge Ram 50 and Plymouth Arrow—were down 47.8 percent from last year, 10,373 versus 19,839.

Sales of the mediums were off 31.6 percent, from 7,865 a year ago to 5,382, while the heavies were down 21.2 percent to 12,759 units, compared with 16,182 in the same month a year ago.

Through October, light trucks showed a decline of 8 percent from the like period last year, 1,751,642 versus 1,904,430. Ten-month sales of the compact pickups dropped 7.8 percent, from

Scale model of Chevy's RV exhibit

This is a scale model of the Chevrolet exhibit at the annual RVIA exposition in Louisville Dec. 1-4. The 10,000-square-foot display area includes diesel-powered motorhome chassis, pickups, Blazers and Suburbans, plus other Chevy recreational vehicles. Also on display will be a 1928 and 1929 Suburban and a 1951 trailer.

Winnebago, Coachmen note sales, profit gains

Two of the recreation-vehicle industry's leading manufacturers — Winnebago Industries, Inc., and Coachmen Industries, Inc. — have reported continued improvement in sales and earnings in spite of the sluggish economy.

Winnebago said net earnings for fiscal 1981, which ended Aug. 29, totaled almost $8.7 million, compared with a net loss of about $13.5 million last year. Sales were up almost 56 percent from $91.9 million in fiscal 1980 to $143 million.

At Coachmen, nine-month net earnings amounted to $3.4 million, in contrast to a loss of about $4.7 million. Sales through September totaled $159.3 million, an increase of 72.4 percent over the year-ago $92.4 million.

The top executives at both companies expressed confidence of further gains in the coming year.

"At this time, the normal fall season slowdown has reduced demand for motor homes," said John K. Hanson, Winnebago chairman. "However, we expect improvement in our operation in the second half of fiscal 1982.

"Cost reduction programs initiated in recent years and continued tight management control of expenses are expected to keep our break-even point at a low level," he added. "Thus, increases in sales next spring and summer should result in further improvement in earnings."

Thomas H. Corson, Coachmen chairman, said the company sees "mounting evidence that interest rates will continue to decline over the next year.

"This will undoubtedly release some of the pent-up demand we are confident exists in the recreational-vehicle marketplace," he said. "It will also be beneficial to our Marlette manufactured-housing operation, which should fill a more important role in our company's future."

In the final three months of

Fuel-saving system developed for heavies

A former General Motors engineer has developed an energy-saving system which he said can slash the diesel-fuel consumption of heavy trucks by 10 to 15 percent.

Joseph G. Koehler, who has spent three decades in the design and development of diesel engines, said his system could reduce the annual average diesel consumption of a heavy truck by 920 to 1,400 gallons and the fuel bill by $1,200 to $1,800.

The system is an electronically controlled, hydraulically operated variable displacement device that Koehler, who also is a former engineering director for Isuzu Diesel of North America, spent more than two years developing and testing.

Koehler said tests of the energy-saving system by his own firm, Fuel Engineering, Oxford, Mich., showed savings of "20 to 30 percent at idle and 10 to 15 percent on the road."

He said the system will be available after the first of the year from diesel-engine distributors throughout the U. S. and will carry a price tag of under $2,000.

The system is designed for the estimated 1.3 million heavy diesel trucks with a gross vehicle weight of 26,000 pounds and over. On average, these trucks travel 51,000 miles a year, use 9,200 gallons of diesel fuel and average 5.4 MPG, according to the American Trucking Assn.

"A minimum 10 percent savings would be significant since the average per-gallon price of diesel fuel has jumped by 125 percent in three years, from 60 cents in the second quarter of 1978 to $1.34 in the second quarter of this year," said Koehler.

In addition to its energy-saving capabilities, Koehler said his system also will prolong engine life and reduce emissions.

He retired in 1975 after 25 years with GM and was a design and development engineer on that firm's 53 Series diesel engines.

Seminars follow annual meeting of RVDA members

FAIRFAX, Va. — The Recreation Vehicle Dealers Assn. of North America expects more than 100 dealerships to be represented at its annual meeting Nov. 29 at the Executive West, Louisville, prior to the start of the national RV exposition at the Kentucky State Fairgrounds.

On Dec. 1, RVDA will sponsor four dealer seminars, and conclude the program that night with a reception and dinner, also at Executive West. Installation of officers and directors and presentation of awards will follow dinner.

James B. Summers, RVDA executive vice president, said he and the association's officers will present staff and committee reports at the annual meeting.

"In spite of all the problems of the RV industry during this past year, RVDA has a surplus of income over expenses," he said.

Two seminars will be conducted by Duane Spader, a veteran RV dealer and president of International Computer Transactions.

The first will involve a new RVDA-sponsored financial planning program called F.A.C.T.S, a manual accounting system in kit form which Summers said allows any dealership with a

recreation on wheels

August total up 7th month in a row

8-month RV shipments rise 42 pct. over 1980

Eight-month shipments of recreation vehicles from manufacturers to their dealers totaled approximately 167,300 units, an improvement of 42 percent over the 117,800 units delivered in the comparable period a year ago.

The August count was up 40.1 percent, from 15,200 last year to 21,300, and marked the seventh consecutive month in which wholesale deliveries topped those in the like month in 1980.

For both the month and the January - August period, shipments were higher than a year ago in all RV categories, according to figures released by the Recreation Vehicle Industry Assn.

The biggest gainers from a percentage standpoint, again for the month and the eight-month period, were the folding camping trailers and conventional (Type A) motor homes.

Also showing an improvement in August, RVIA reported, was the Index of Consumer Sentiment, which rose 3.1 points to 77.2.

"The Index now stands at its highest level since October, 1978, and is nearly 10 points higher than a year ago," a spokesman said.

• "Due largely to increased consumer confidence in government economic policies, the Index continues to gain strength and seems to be dampened only by lingering concerns over high interest rates," he added.

The spokesman said the increased retail activity in August "reflects the expected late summer pattern of a lowering in dealer inventory levels from those of the past several months."

He noted that dealer inventories of chopped vans are at the lowest levels since RVIA began its survey of stocks, and that retail sales of folding camping trailers—most of which can be towed easily by today's downsized cars — were nearly four times higher than those in January, 1980.

Although August shipments of all types of towable RVs were down somewhat from July, they were 40.7 percent higher than those in the same month a year ago.

The August total was 8,300 units, compared with 5,900 last year. The number was almost 11 percent below the 9,300 towables shipped in July.

Through August, manufacturers had shipped 76,000 of the towable units, an increase of 38.4 percent over last year's 54,900 vehicles.

Delivery of fold-down campers for the eight months totaled 26,200, up 53.2 percent from last year's 17,100; travel trailers were 34.8 percent higher, from 34,200 to 46,100, and truck campers rose from 3,600 to 3,700, a gain of 2.7 percent.

August shipments of all types of motor homes increased 43.5

Ford is recalling 7,500 chassis for brake-tube check

DEARBORN. — Ford Motor Co. is notifying owners of approximately 7,500 1980- and 1981-model B Series and F Series cowl chassis vehicles to return them to their dealership for inspection of the brake-tube routing, installation of a brake-tube routing clip and, if necessary, replacement of any brake master-cylinder tube and hose assembly found to be chafed.

"We have found in some cases that the brakelines have moved from their design positions," said Robert H. Transou, manager, service engineering office, Ford Parts and Service Division, "creating the possibility for brakelines to chafe on other vehicle components during vehicle use.

"If the chafing condition were present, a brake-fluid leak could develop affecting the service-braking capability of the vehicles," he said. "Parking-brake operation would be unaffected."

The inspection and necessary service will be done at no cost to the owner. The company is unaware of any accidents or injuries, Transou said.

Mini features automotive finish

The exterior aluminum skin of 1982 mini motor homes produced by Coachmen Recreational Vehicle Co., Middlebury, Ind., feature a high-gloss automotive finish. The vehicles, built on Ford, Chevrolet and GMC chassis, are offered in lengths of 20 and 22 feet.

Total of 173,116 in October is off 11.6 percent

'82 truck year opens with sales dip

Continued from Page 14

447,511 in 1980 to 412,668.

The non-captive imports, again, were higher in the January-October period than last year, while sale of the captives were off substantially.

Through October, 239,962 non-captives were retailed, an increase of 7.6 percent over the year-earlier 223,113. The captives dropped 29.8 percent below the 1980 mark, 142,402 units versus 202,736.

Sales of medium trucks for the 10 months were down 19.2 percent to 65,735, as against 81,306 a year ago. Heavies totaled 130,845 units through October, a decline of 15 percent from last year's 153,910.

Going into November, according to the Motor Vehicle Manufacturers Assn., retail outlets had an estimated 522,764 unsold trucks in inventory, down 1.4 percent from the 529,333 units on hand at the same time a year ago.

Big Three truck sales in the first month of the 1982 model year totaled 134,103 units, a decline of 15.7 percent from last year's 155,397. The 10-month count was down almost 11 percent, from 1,703,411 in 1980 to 1,517,325.

Going into the final two months of the calendar year, Ford had a comfortable lead of 52,841 unit sales over Chevrolet, 632,523 versus 579,682. At the same time last year, Ford had 676,991 sales, 31,035 units higher than Chevrolet's 645,956.

Ford was No. 1 in 1981 model-year sales, and appears to have a safe-enough lead to capture the calendar-year race, too. Ford's model-year total was 760,302 units, 62,202 more than Chevrolet's 698,100.

In October, Ford dealers retailed 59,970 units, off 14.6 percent from the year-earlier 70,220. Courier sales were down almost 24 percent, from 7,004 in 1980 to 5,337.

The 10-month total of 632,523 sales was 6.6 percent lower than last year's 676,991. There were 55,197 Courier sales through October, a decline of 19 percent from the year-earlier 68,124.

Chevrolet dealers retailed 47,102 trucks in October, off 14.3 percent from the year-ago 54,985. Included were 3,416 LUV sales, down 55 percent from the 7,587 sold last year, and 1,476 sales of the all-new S-10 domestic compact pickup.

Through October, 579,682 Chevy trucks had been retailed, off 10.3 percent from last year's 645,956. LUV sales were down 26.3 percent, from 78,119 units to 57,553. S-10's two-month count was 1,480 units.

Dodge and Chrysler-Plymouth dealers sold 14,082 trucks during the month, 17.1 percent fewer than the year-earlier 16,992. Dodge Ram 50 sales were down almost 71 percent, from 3,910 to 1,143, and the Plymouth Arrow total was off 64.3 percent, from 1,338 to 477.

The 10-month total of 158,106 sales was a decline of 28.6 percent from last year's 221,438. Dealers sold 21,971 Ram 50s, off 45 percent from the year-earlier 39,805 units, and 7,681 Arrows, down 54 percent from 16,688 in 1980.

GMC truck sales in October were down 2 percent, from 13,200 a year ago to 12,949. Through October, the total was 147,014, a decline of 7.6 percent from last year's 159,026.

Sales of Jeep four-wheel-drive vehicles during the month were off 16 percent, from 5,847 a year ago to 4,910. The 10-month total of 53,500 units was down 19 percent from last year's 66,128.

Volkswagen dealers retailed 3,196 compact pickups during the month, a gain of 85 percent over last year's 1,727. Through October, the total was up 33.1 percent, from 21,662 a year ago to 28,824.

Mercedes-Benz reported that October retail sales were up 10.1 percent to 350 units, compared with 318 a year ago. The 10-month total was 3,311, down 29 units from last year's 3,340.

Toyota dealers retailed 9,099 units during the month, an increase of 46.1 percent over the year-ago 6,229. The 10-month count, however, was down slightly from 1980, from a record 117,459 to 116,822 units.

Datsun and Mazda sales were higher for both the month and the January-October period.

October sales of the Datsun trucks totaled 7,617 units, up 4.4 percent from last year's 7,298, while the 10-month total of 101,206 was 3.1 percent higher than the year-earlier 98,119 units.

Mazda sales during the month were up 77.8 percent, from 815 in 1980 to 1,449. Through October, the count was 14,318, an increase of 90 percent over last year's 7,535.

Sales of Isuzu compact pickups, which have been on the market only since the second quarter, totaled 1,251 in October. Through October, dealers had retailed 7,616 units.

6.6 million domestic cars produced in 1981 run

Model-year build lowest in 6 years

By Patricia Hoffman
Staff Writer

Domestic auto makers felt the sting of another recession period as production for the 1981 model year was the lowest in six years. Output dropped 6.29 percent below the total for the 1980 model run.

There were 6,639,954 cars assembled in the 1981 model year, a drop from 7,085,480 in the comparable 1980 period, and the lowest model-year output since 1975 when the makers completed only 6,532,880 units.

Of the six auto companies, three reported declines for the '81 model period.

General Motors was down 10.24 percent to 4,133,392 from 4,605,038 in the 1980 model run. GM's output was its lowest since 1975 when 3,484,224 units were completed.

Volkswagen of America also was down from 1980. Its total dropped 19.54 percent to 179,635 from 223,267.

American Motors suffered the largest decline, falling 31.30 percent to 137,125 from 199,613 in the 1980 model year. This was the lowest model year output for AMC since 1957 when 114,084 units were assembled.

The picture was brighter for the other makers.

Ford Motor rose 1.60 percent in the 1981 model year to 1,395,594 units from 1,373,582 in 1980.

Chrysler Corp. was up 16.12 percent to 791,258 from 681,406; and Checker Motors rose 14.61 percent to 2,950 from 2,574.

Several cars were new to the '81 lineup, including Chevrolet Cavalier, Cadillac Cimarron, Pontiac T1000 and J2000, Ford Escort and EXP, Mercury Lynx and LN7, Dodge Aries and Plymouth Reliant.

Auto makers have an optimistic outlook for the 1982 model run as the demand for more downsized, fuel-efficient cars is met with such as GM's Chevrolet Celebrity (A-car); Pontiac 6000 (A-car), Oldsmobile Cutlass Ciera (A-car) and Firenza (J-car) and Buick's Skyhawk-J (J-car) and Century (A-car).

Also new for '82 are Chrysler Corp.'s front-wheel-drive Chrysler LeBaron and Dodge 400 and Ford Motor's Lincoln Continental.

Sharing the dividends

Members of the Arizona Automobile Dealers Assn. will share in more than $771,000 in dividends from the association's Workmen's Compensation Insurance program for the 1980 policy year. Here, from left, George Childress, owner, Childress Buick, Phoenix, and vice chairman of the AADA Group Insurance Trust, and Dean Coulter, owner, Coulter Cadillac, Phoenix, and chairman of the Insurance Trust, accept the first-half dividend check for $771,637 from Stan Braun, president, Mission Insurance Co., Los Angeles, and Gordon Reynolds, resident vice president, Mission Insurance Group's Phoenix branch office.

More aggressive marketing stance for '82

Volvo aiming ads at B-O-P owners

By John A. Russell
New York Staff Writer

ROCKLEIGH, N. J.—A more aggressive marketing stance will characterize Volvo's 1982 model year as the company, coming off one of its most successful model years in 1981, moves to take on the competition in a variety of ways.

Joseph Nicolato, Volvo of America senior vice president and head of the company's car division, said flatly that the stance will be aggressive and that the company will zero in on domestic competitors.

Nicolato is talking about "going toe-to-toe with Buick, Oldsmobile and Pontiac with our GL series cars." He said there will be less generic advertising and more attention to specifics.

William Hoover, vice president-marketing, said that information shows that 50 to 55 percent of new Volvo buyers—especially of the GL series—are coming from upscale domestic cars. Volvo, in its campaign for the new model year, is attempting to attract more of those owners, Hoover said, while keeping its traditional owner base.

Nicolato added that pricing enters into this and that consumers are making more careful comparisons among cars now that so many are over $10,000.

To back up its more aggressive campaigns, Volvo has increased its inventory volume by 15 percent and has boosted its sales goal to 67,000. He added that Volvo of America accounts for 35 percent of the large-car production of AB Volvo and the company expects the trend to continue.

Nicolato said the model mix for 1982 has been changed to include more GLs, and the diesel will be available in all 50 states in a GL package. This is balanced with the turbocharged models in two-door, four-door and station wagon versions.

Another option addition is automatic transmission in the turbocharged cars, he said.

"We're attempting to satisfy and keep our present owners, and broaden our base at the same time," he said.

Volvo will advertise in print and with spots on television. The print ads focus on price-value relationships, durability and performance. One begins: "Why people who bought a Buick, Olds or Pontiac a few years ago are buying Volvos now."

In addition, to launch the new models at the dealership, Volvo has a promotion with a rabbit's foot charm. Print ads will be headlined: "If you expect your next car to last as long as a Volvo, we'd like to give you one of these."

Television commercials will carry a similar "good luck" theme.

Hoover noted that advertising will be more targeted than in the past. Some of the TV spots have been changed and turbo advertising will appeal in selected markets, predominantly in sports programming.

As for the diesel, Hoover said it was not a question of selling the diesel but of associating the name Volvo with a diesel-powered automobile.

• Volvo also is gearing up its Special Sales department for 1982. It will be concerned with the development of the daily rental and small fleet business.

Hoover said that about two years ago the company made arrangements with Hertz for Volvo to supply less than 500 cars for daily rental use. Since then the operation has grown to include Avis, and the number of rental Volvos has risen to 2,500.

Now, Hoover said, the program is being expanded to offer dealers the opportunity to establish their own daily rental business through the Volvo leasing and financing programs. Hoover said the company wants to encourage dealers to get into this element of the business because it is a viable and growing source of profits.

In addition, the company intends to build up its operations in selling to small fleets in the range of 10 to 20 cars.

Also under the guidance of Special Sales, the company will pursue the police car and taxi business, offering both diesel and gasoline engines for the latter.

Hoover stressed that Volvo will pursue the taxi business only where it has strong dealer support, as it did with the rental agency business. He also added that actual sales would be worked out through dealers.

Burt Subaru sets 2 sales records

ENGLEWOOD, Colo. — Burt Subaru set two national Subaru sales records in October.

The dealership sold 221 new Subarus for a single-month record, and it topped the old calendar-year national record of 1,417 units with two months to spare.

Burt Subaru held both of the previous records.

Pierce Buick moves

HARTFORD. — Pierce Buick has moved into new facilities at 722 Wethersfield Ave.

Toyota is ordered to pay $5 million for fiery deaths

FT. LAUDERDALE, Fla. — A Broward County Circuit Court judge refused to increase a $5 million award against Toyota for a couple whose three daughters were killed when their 1973 Toyota Corona was struck in the rear and burst into flames.

Judge Miette Burnstein also denied a motion for a new trial and signed an order finalizing the $5 million civil judgment against Toyota.

This was the first product liability case involving Toyota which was not settled out of court.

The parents had asked the judge to increase punitive damages awarded by a jury to $165 million.

Betty and Wayne Moll charged in their suit that Toyota knew, as early as the mid-1960s, that the Corona gas tank, gas cap and filler neck were improperly designed.

Their daughters, Wendy, 15; Pamela, 18, and Denise, 25, died in a 1979 accident in which their car was hit from the rear on Interstate 95.

Toyota argued that the fuel system was "equal to or better than the fuel systems of similar cars of that era."

McCracken looks ahead

Brighter U.S. economy expected within a year

GREENSBORO, N. C. — The U. S. economy is apt to remain in its current recession into early 1982, but should be improving a year from now, according to Prof. Paul W. McCracken, of the University of Michigan.

Speaking at the Bryan Lecture Series offered by the University of North Carolina-Greensboro, McCracken predicted that a year from now "the economy should be rising steadily at a 2-3 percent pace (in real terms), with a 7-8 percent rate of inflation (far too high but improving), and unemployment beginning to move downward."

He compared the new decade with the previous one: "The 1970s began reasonably well and finished in trouble. The 1980s are starting with troubles, but should look better at the end."

McCracken has twice served on the President's Council of Economic Advisers.

In titling his address here, McCracken posed the question, "Can This Tangled Economy Be Straightened Out?"

"If mentally we look around the world of 1981," he observed, "the easy answer to our question is, 'No!' The industrial nations are all experiencing varying degrees of inflation, unemployment and inability to deliver further sustained gains in real income.

"The U. S. performance exemplifies these problems. Our 'par for the course' historically has been about a 2 percent per year rise in the price level, an unemployment rate averaging 5 percent, and a 2½ percent per year gain in productivity and real incomes.

"The path of recent years has been giving us an unemployment rate in the 7 percent zone, inflation at double digit rates and slowly shrinking real incomes."

In spite of the "understandable" current pessimism, McCracken said, "we may slowly be setting the stage for better things."

First, he said, "the forces producing pressure for overly large increases in public spending are being subjected to stronger constraints."

"The rise in public spending (federal, state, and local) will now absorb only about 45 percent of the rise in national income, compared with the 60 percent implied by President Carter's January budget," he said.

"Second, useful tax action has been taken. This was essential to force stronger restraints on spending. Less money in the till means more economic spending. And incentives to invest and earn and save were sharpened.

"Third, we have a steadier and more moderate monetary policy. Current high interest rates are caused by high inflation, not today's Federal Reserve policy."

Pa. lawmakers again block funds for emission inspection

HARRISBURG, Pa.—Funding for a court-ordered auto-emissions inspection program in 12 major counties throughout the state has once again been blocked by the State Senate.

By a 37-9 vote, the Senate overrode Gov. Richard Thornburgh's veto of legislation blocking the funds. Earlier, the House of Representatives voted 194-1 to override a veto of the same bill.

Although Thornburgh has said he opposes the emissions-inspection program, he has said that refusal to fund it could result in the loss of $400 million in federal highway funds for Pennsylvania.

The state became obligated to carry out the inspection program under a consent decree signed by former Gov. Milton J. Shapp, the Delaware Valley Citizens Council for Clean Air and the federal EPA.

Critics said it would cost the state $3.5 million to implement the agreement. U. S. District Judge Louis C. Bechtle, in Philadelphia, had ordered the program to begin by May 1, 1982, although the state has appealed the ruling to the Third U. S. Circuit Court of Appeals in Philadelphia.

Jim Lanard, of Philadelphia, attorney for the environmental coalition involved in the court decree, said his group will continue to fight to implement the emissions-inspection program.

He said the group will ask the U. S. District Court to issue a contempt citation against the state and will seek other remedies, including daily fines of up to $25,000 and withholding federal funds for highway construction and sewage treatment facilities.

Under the plan, motorists in 12 counties—including the Philadelphia and Pittsburgh areas—would have to have annual auto-emissions checks.

10 assembly plants affected

Downtime cuts U.S. car production

By Patricia Hoffman
Staff Writer

With downtime scheduled last week at 10 auto assembly plants, plus a line rate reduction at American Motors' Kenosha facility, U. S. auto production fell 7.69 percent below that of the previous week.

Last week's output was estimated at 102,059 units, down from 110,563 the previous week and a substantial drop of 33.29 percent from 152,999 in the comparable 1980 week.

Breakdown for the week by company is: General Motors, 72.09 percent; Ford Motor, 14.13 percent; Chrysler Corp., 7.15 percent; Volkswagen of America, 4.03 percent; American Motors, 2.50 percent and Checker Motors, 0.10 percent.

So far this year, the auto makers have completed 5,735,309 units, up 3.07 percent from 5,564,745 in the comparable period last year.

Last week, five Ford assembly points were idle for inventory control. They were: Dearborn, Chicago, Lorain, Metuchen and San Jose. It was the second week of downtime for the plants.

Also idle last week for inventory control were the Chrysler Newark and GM Bowling Green (Corvette) facilities plus the second shift at GM's Willow Run point.

Newark and Willow Run are slated to resume operations Nov. 23. Willow Run will resume its second shift with total production cut from 70 an hour on two shifts to 50 an hour on two shifts.

GM's Bowling Green facility is scheduled to return today (Nov. 16).

Chrysler's Belvidere assembly point was down last week for its final week of conversion in preparation for the front-wheel-drive pickup trucks. The facility is slated to return today with production of both cars and trucks.

GM's Janesville plant continues on a five-month shutdown for changeover to the J-car. The point has been idle since Oct. 19.

AMC's Kenosha facility returned last week after a week off for inventory control. The point resumed with a reduced line rate, dropping 20 percent to 510 cars per day.

Checker Motors' Kalamazoo plant will be idle this week (Nov. 16) for model changeover. It is slated to resume operations Jan. 11, 1982.

Canadian car output rises 22 pct. despite holiday

While there were only four days of production last week at Ford Motor, Volvo and Chrysler Corp. car facilities due to the Remembrance Day Holiday, General Motors and American Motors car assembly points completed five days of output helping to boost Canadian auto production above the previous week's total.

Last week's car output was estimated at 18,217 units, up 22.28 percent from 14,898 in the previous week, but down 7.16 percent from 19,621 cars in the comparable 1980 week.

So far this year, the auto manufacturers have completed 711,672 units, down 2.56 percent from 730,347 in the comparable period last year.

Truck production also improved last week despite the holiday downtime at Ford and Chrysler. Output was targeted at 9,995 units, up 22.83 percent from 8,137 in the previous week, but down 11.59 percent from 11,305 in the comparable 1980 week.

Year-to-date output for the truck manufacturers is 446,282 units, a gain of 1.55 percent from 439,481 in the same period last year.

Auto and truck assembly lines at all Ford, Chrysler and Volvo facilities were quiet last Monday (Nov. 9) for the Remembrance Day holiday.

Ford's St. Thomas car assembly point resumed operations last Tuesday after being idle since Aug. 31 for changeover and inventory control.

The plant worked four days, then went down again beginning today (Nov. 16) for inventory control. Operations are scheduled to resume Nov. 23.

Ford's Oakville truck facility returned last week after being idle a week for inventory control.

GM's Oshawa (No. Two) facility resumed operations last week (Nov. 9) after being down since Aug. 6 for model changeover.

Also at GM, the St. Therese assembly point will begin an extensive downtime period Nov. 30 for inventory control. The facility is slated to return Jan. 10, 1982.

Truck production steady for week; 3 plants return

Domestic truck production last week rose slightly from the previous week's output with the return of International Harvester's Ft. Wayne and Springfield Assembly plants and American Motors' Toledo (Jeep) facility, but output was below that of the comparable 1980 week.

Truck production last week was targeted at 26,621 units, up slightly from 26,503 in the previous week, but down 35.25 percent from 41,114 built in the comparable week last year.

So far this year, the truck makers have completed 1,465,752 units, up 6.63 percent from 1,374,652 in the comparable 1980 period.

All facilities at International Harvester resumed production last week (Nov. 9) after being idle two weeks for inventory control.

AMC's Toledo (Jeep) facility also returned last week after one week of downtime for inventory adjustments.

Ford Motor's Lorain and Twin Cities assembly points were idle last week for inventory control.

Chrysler Corp.'s Belvidere plant is expected to resume operations today with assembly of the front-wheel-drive pickup trucks.

The facility has been down since Oct. 26 for conversion for truck assembly. Belvidere will be the only Chrysler assembly plant in North America producing both cars and trucks.

Everman honored

Dick Everman, left, past president (1980-81) of the Chicago Automobile Trade Assn., was honored recently for his service to the local automobile business by members of the association and Joe Lyng, owner of Greater Chicago Auto Auction, who presented him with a plaque.

Shay is sued for civil fraud; he sues back

By Edward Lapham
Financial Editor

Harry Shay and his Shay Motors Corp. replicar company are under legal fire.

Illinois Attorney General Tyrone Fahner has filed suit in Sangamon County Circuit Court against Shay and his company, charging civil fraud. The suit charges that the company had not refunded $500 dollar deposits solicited from some Illinois dealers, produced an inferior car and committed other fraudulent actions.

Shay responded by filing a $50-million suit against Fahner in Federal Court in Detroit, charging Fahner with "libel, slander and misrepresentation" for remarks he made to reporters.

"We haven't been served with any papers," Shay told AUTOMOTIVE NEWS last week.

Paul Zemitzsch, a spokesman for the Illinois attorney general, told AUTOMOTIVE NEWS his office isn't concerned about the suit because "by Illinois law the attorney general cannot be sued."

The spokesman also said the investigation currently involves strictly civil fraud, but could turn into a criminal case if there is evidence that there was an intent to defraud.

Shay, whose company recently completed a new two-year $2.4-million revolving credit agreement and is still discussing the possibility of a public equity offering with Wall Street underwriters, said he and his company "routinely" respond to criticisms from various states in order to clarify matters.

Earlier, the company had difficulties in Maryland and Wisconsin involving its registration as a motor vehicle manufacturer, and in California where its system of licensing dealers to sell the '55 Thunderbird replicar came under fire.

However, Douglas Carlson, assistant attorney general in the Iowa Consumer Protection Division last week told AUTOMOTIVE NEWS that his staff will likely file suit against Shay the second week in December.

Shay said the Model A replicars, of which he has sold about 5,000, are back in production to use up the inventory of parts, although "the Bird is the feature car." He said about 100 Birds have been delivered and another 35 are in process.

The company's workers, who were organized by the UAW earlier in the year, last weekend came to terms, ending a brief three-day strike, Shay said.

Rampage staged

Dodge minipickup rolls at Belvidere

Chrysler Corp. last week produced its first front-wheel-drive Dodge Rampage pickup at the Belvidere (Ill.) Assembly Plant. Belvidere is the company's first plant to build both FWD cars and trucks off a common assembly line. The Rampage is equipped with a standard 2.2-liter four-cylinder engine and four-speed transmission. Dealer intro date is Jan. 7. Current production plans call for 18,000 Rampages during the '82 model year.

Imports' inventory shoots upward to a 54-day supply

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. climbed sharply during October and was good for 54 days Nov. 1, up from 45 days a month earlier.

The inventory buildup follows the usual pattern of import stockpiling, which has been to drop to the lowest point of the year in September, then grow to a peak in January.

The combined car and pickup truck inventory Nov. 1 was a 60-day supply. Since the import segment of the auto business considers 60 days the optimum stockpile, it appears that things couldn't be better than they were on Nov. 1. But, in fact, the balance between cars and pickup trucks was quite lopsided. While the industry had a 54-day supply of cars, which was short enough in some lines to affect sales, it had a rather beefy 94-day supply of pickup trucks.

• Toyota boosted its skeletal stockpile during the month but still had only a meager 22½-day supply Nov. 1. Honda, with a 35-day supply, Mercedes-Benz, with an estimated 37-day stock, and BMW, with a 40-day supply, were on the lean side also.

Subaru had a 40½-day supply and Mazda had a 45-day supply, both of which were low, but probably not low enough to put a lid on sales. In stronger shape were Isuzu, with a 66-day supply of new cars, and Nissan with a 74-day supply.

Chrysler Corp. had a heavy 204-day supply of Mitsubishi-built cars in stock and a 251-day supply of pickup trucks.

Truck stocks were substantially higher than new-car supplies. Toyota had a 57-day supply of pickups, Mazda 75 days, Nissan 113 days, and Isuzu 149 days. In addition, Ford had a 66-day stock of Couriers and Chevrolet an 87-day supply of LUVs.

All the Japanese nameplates had a 52½-day supply of new cars, compared with a 57-day supply from West Germany and a 59-day stockpile from all other countries.

Volkswagen had an 83-day stockpile of German-built cars, while Porsche and Audi both had 61-day stocks.

Volvo had an estimated 67-day supply and Renault and Saab each had 89. A sales upturn in October resulted in DeLorean entering November with a 56-day supply.

The imports' 54-day supply of new cars Nov. 1 compared with the bloated domestic stockpile of 81 days.

UAW blasts latest effort to win sacrifices from workers in '82 pact

GM's 'Road to Survival' is rocky

By Marjorie Sorge
Labor Editor

General Motors has launched an allout campaign to convince its 400,000 hourly workers in the U. S. that sacrifices must be made in next year's contract negotiations if GM is to remain competitive.

According to a company memorandum, "The Road to Survival," GM is planning a series of voluntary in-plant meetings between workers and management to convince the hourly employes they must "reduce or eliminate unrealistic expectations about economic gains in the forthcoming contract negotiations" and face "the hard realities that may be required for survival."

The program is designed to be carried out with UAW help, but the union has turned down that idea.

In a joint statement by UAW President Douglas A. Fraser and Owen Bieber, vice president and director of the union's GM Department, the program was labeled "shenanigans" and "an attempt to generate distrust of the UAW leadership."

"We are advising our local union leadership that it should not participate in this unilateral program," the statement said.

The GM memo said GM is trying to set the record straight on the seriousness of the current competitive situation. GM officials have said there is an $8 per hour labor cost differential between the U. S. and Japan and have indicated they want that money back in next year's negotiations.

The UAW disagrees with the labor cost differential and said it could be as little as $3 per hour.

The current contract expires Sept. 14, 1982, and negotiations traditionally begin in the summer.

• GM's program consists of four 15-20 minute films followed by discussion geared toward its current economic status and what the company needs for survival. The memo said the program is also designed to accelerate two-way communications between supervisors and employes and seek new ways to improve efficiency.

"We have an obligation and a responsibility to tell them (workers) what kind of a competitive struggle we are in because they are right in it with us," said Roger B. Smith, GM chairman. "It is a good thing to be able to talk to people when they understand the facts, and the best way to do that is to get the facts out where our employes can know everything."

Smith said the program is an effort to tell employes that their jobs are at stake because of the cost differentials with GM's competitors.

All hourly and salaried workers will attend the meetings, on a voluntary basis, in groups of 25 to 35. Division general managers and plant managers will conduct the meetings, which will be held during working hours.

GM had originally suggested using the already-established QWL (quality of work life) committees as advisory/steering committees. Those groups have been formed in certain GM plants to help resolve company-union problems on the plant floor.

That plan was labeled "improper" by GM after the UAW strongly criticized the idea.

"It (QWL) was never intended to be a vehicle to propagandize or parrot the current views of the chairman of the board of GM as to how to save General Motors through worker sacrifice," the joint UAW statement said. ". . . Under no circumstances should a QWL committee be permitted to be subverted by such shenanigans."

The "Road to Survival" program suggests that managers take a leadership role in the discussions and be unified in their approach because "doubts or differences expressed to em-

breaking news

GM diesel sales up 54 pct. for model year

DETROIT.—General Motors sold 317,691 diesel-powered cars during the '81 model year, up 54.62 percent from 205,456 sold during the '80 model year. All divisions except Cadillac posted gains. Leader Oldsmobile sold 160,738 diesel cars, up 34.51 percent from 119,495 in the '80 model year. Chevrolet increased its diesel volume 259.68 percent by nearly tripling B-car installations of the Olds-built 5.7-liter diesel V-8 and offering an Isuzu-built 1.8-liter diesel in Chevette.

GM A-car prices: $8,313 to $9,599

DETROIT.—Prices of General Motors' new front-drive A-cars will start at $8,313 for the base Chevrolet Celebrity two-door and jump to $9,599 for the Oldsmobile Cutlass Ciera Brougham four-door. Prices for the other division's base two-door models are $8,729 for the Pontiac 6000, $8,847 for the Cutlass Ciera and $8,980 for the Buick Century. Prices do not include a $399 destination fee. The A-car intro is Jan. 14.

Chrysler sells tax credits for $26 million

DETROIT. — Chrysler Corp. received a $26 million boost to cash flow by beating Nov. 13 deadline and selling more than $100 million in tools and equipment put into service in 1981 to General Electric Credit Corp.

The two companies completed the transaction which, in effect, "sells" investment tax credits. GECC said it transferred the credits to its parent General Electric Co., which can use them.

Under terms of the Economic Recovery Tax Act of 1981, companies, like Chrysler, which are unable to use the tax credits, can sell the equipment to profitable companies and lease them back in what is known as a leveraged leasing arrangement.

Chrysler said the new machinery, equipment and tooling are located in 35 states, but concentrated in Delaware, Illinois, Indiana, Michigan, Missouri, New York and Ohio.

"We have succeeded in using substantially all of the benefits that the lease provisions offer on expenditures made in the first three quarters of 1981 to modernize our plants," said R. S. Miller Jr., Chrysler executive vice president—finance. "We are very pleased with the transaction."

Chrysler was able to complete the deal before the deadline following a government ruling that it was eligible despite a precarious financial condition. That ruling came just three days befor the deadline.

Some Wall Street analysts earlier had believed the auto maker might have received as much as $60 million from the sale.

Earlier, Ford Motor Co. sold nearly a billion in equipment to IBM for an estimated $200 million under the same leveraged leasing provision.

Affordable Used Cars signs NYC exclusive

HAZLET, N. J. — Affordable Used Car Rentals has licensed S & W Sales and Service, Queens, N. Y., to be exclusive outlet for New York City of its used-car rental system.

According to an agreement with Donald Buhler, president of Affordable, S & W will open a location in Queens, followed over the next five years with locations in the boroughs of Brooklyn, Manhattan, Richmond and the Bronx.

Escort goes open-air

Ford calls it a design concept, but it is the company's answer to the convertible versions of the VW Golf and Fiat Strada now being produced in Europe. The open top version of the sporty Escort XR3 was exhibited at Frankfurt to test public reaction.

New programs to run to Dec. 31

AMC extends rebates, offers cash on Renault

By Joseph Bohn
Marketing Editor

American Motors has extended Concord/Eagle and Jeep rebates and has launched a variety of cash incentives for dealers and sales persons on '81 Renault 18i models, paying up to $1,650 per vehicle.

The Concord/Eagle 10 percent rebate, originally running from Oct. 1 to Nov. 30, has been extended to Dec. 31. It covers all new and unused '81 and '82 Concord and Eagle sedans and wagons sold or delivered during the program period.

Two Jeep programs were also extended.

The '82 Cherokee, Wagoneer and truck consumer rebate, originally running from Sept. 24 to Nov. 25, has been extended to Dec. 31. It pays $750 on Cherokee and Wagoneer (dealers contribute $250) and $500 on trucks (dealers contribute $200). It covers all new and unused '82 models sold or delivered during the period.

Similarly, the 10 percent consumer rebate on CJ and Scrambler, running from Oct. 1 to Nov. 30, has been extended to Dec. 31. It covers all new and unused '81 and '82 units sold or delivered during the period.

AMC also is offering several programs designed to clear out '81 Renault 18i models. There are wholesale and retail phases, but no direct consumer rebates are involved.

The wholesale portion runs from Oct. 28 to Jan. 31. Eligible are all '81 R-18i models ordered from the zone office during this period.

Any '81 Renault 18i ordered before Oct. 28, but invoiced after Nov. 18, qualifies for wholesale incentive money, but not the retail incentive.

Wholesale payments are as follows: Base model wagons, $800; base model sedans, $700; deluxe model wagons, $600; deluxe model sedans, $500.

These payments are made in the form of discounts deducted from the invoice. For eligible vehicles invoiced prior to the program, dealers will receive a check for the incentive discount from the factory.

Under the wholesale program there is also a fast-start bonus,

Cafiero resigns as president

DeLoreans voluntarily recalled

By Edward Lapham
Financial Editor

DeLorean Motor Co. absorbed two jolts last week — the resignation of its president and chief executive officer and the voluntary recall of all vehicles sold to date for a potential safety problem.

The company, which reported sales of 720 DeLorean cars in October and 1,715 since the cars went on sale in the summer, said the problem involves a "nut securing the lower ball joint and stabilizer bar" which may work loose.

A spokesman for the company said it is a voluntary recall. He said the problem takes about 30 minutes to fix at dealerships and is being corrected at no cost to car owners.

"It's a torquing problem — the nut is vibrating loose," the spokesman said. He said the company knows of no accidents caused by the front suspension problem.

The resignation of Eugene A. Cafiero, DeLorean president since May, 1979, startled some industry observers, but it came as no surprise to those close to the company.

The press release announcing the resignation, which is to take effect Dec. 15, said Cafiero, 55, will remain a consultant and board member, although he will no longer be involved in the day-to-day operations.

Eugene A. Cafiero

In the release Cafiero said the "challenge" he accepted when he joined DeLorean "has been accomplished" in a little more than two years.

"While I thoroughly enjoyed my involvement, I believe it is time to be relieved of my heavy travel schedule and spend more time with my family," Cafiero said.

In an interview earlier this year, Cafiero told AUTOMOTIVE NEWS he was still spending about half of his time at the company's assembly plant in West Belfast, Northern Ireland.

"We will certainly miss our daily association with Gene," Chairman John Z. DeLorean said in the statement. "Gene's confidence, energy and expertise were crucial in accomplishing what many doomsayers inside and outside the auto industry said was impossible."

However, Cafiero, who was moved upstairs to vice chairman and then eventually left Chrysler Corp. when Lee Iacocca joined that auto maker in 1978, was known to have had some differences of opinion with DeLorean.

"There were long periods of time when the two didn't even talk to each other," said one well-placed source.

"John blamed Gene for a lot of things that went wrong along the way," said one insider, "things that weren't necessarily his fault. Finally John wanted Gene to be in Belfast full-time, and I think that was the clincher."

Cafiero is the highest ranking official to leave DeLorean Motor Co., although several other people who were key participants in the project at one time or another have left in the last three years.

They include William T. Collins, who was involved with the product design from the very outset; Charles K. Bennington, former managing director of the Belfast operation; William Haddad, former planning vice president, and three former chief financial officers—Walter Strycker, Robert Dewey and James G. Stark.

Despite the Cafiero resignation and the safety recall, the company continued with business as usual. A company spokesman said there were no new developments in the libel writs issued last month, following charges of financial irregularities in the British press.

One of the company's directors, G. Edmund King, partner in Wood Gundy, Ltd., which invested in DeLorean Motor Co., has taken a car to Toronto to drive and evaluate. That move fueled speculation that DMC might be close to signing a Canadian distributor and beginning sales there.

The company's current production rate is 80 cars a day. More than 5,000 have been build to date, the company said.

Dealers covered on orders through Dec. 31

Chrysler offers rebate protection

HIGHLAND PARK, Mich. — Chrysler reportedly will comply with requests by zone people and dealers to pay rebates on vehicles sold but not delivered before the Dec. 31 cutoff date.

Dealers had been concerned that units sold, but not retail delivered, before Dec. 31 would be denied the factory rebate.

Out of fear that they might be stuck paying rebates on these vehicles themselves, some dealers had turned down deals.

Recently, the Independent Dealer Committee Dedicated to Action sent a mailgram to Chrysler officials asking that the rules be amended to guarantee the rebate on vehicles arriving after Dec. 31.

Chrysler is expected to require affidavits to verify sales of vehicles sold during Nov. 13 to Dec. 31 (Texas) and Oct. 14-Dec. 31 (other states) but delivered at a subsequent date.

Chrysler Corp. has put more Chrysler Corp. has put more merchandising money behind its Dodge 400 and Chrysler LeBaron and has extended the sign-up for its Savings Certificate program again.

In a communique to dealers, Chrysler said Dodge 400 and Chrysler LeBaron two-doors ordered between Nov. 9 and Nov. 25 are eligible for a $400 merchandising allowance.

Additionally, they qualify for consumer rebates, or Savings Certificates, of $400 on units delivered between Jan. 1-31, 1982.

The merchandising and retail rebate money is available only to dealers participating in Chrysler's Savings Certificate program.

Chrysler said that because the changes "enhanced the value" of its Savings Certificate program, it was extending the sign-up date to Nov. 20 for dealers who still want to get into the program. This is the third extension.

Chrysler first extended the sign-up program when it announced an extension of rebates on certain imported cars, and the second time when it added LeBaron and Dodge 400 to the rebate program.

Industry sources speculated that Chrysler singled out two-door models of LeBaron and Dodge 400 for the $400 merchandising allowance because it has a much higher production capacity on the two-doors. There is no four-door model offered in the Dodge 400 line.

Some sales managers — and dealers — also complained about being pressured to sell equipment packages under a program Chrysler has been running since the beginning of the model year.

Essentially, the company has been offering sales managers prize points if they order certain cars—a base Aries, for example—with certain equipment packages.

Sales managers complained of being pressured — receiving letters at their homes in the form of "report cards" which asked why haven't they done better.

Docksiders

Arrival of the first '82 K-cars in Puerto Rico prompted this San Juan dockside display by distributor Boricua Motors, with a little help from Kenyon & Eckhardt, its ad agency, and an airplane from which the 250 Ks were photographed.

Model year just won't fly

Early-November sales remain flat

By Jennie L. King
Staff Writer

Early-November domestic new-car sales trailed the 1980 total, marking the fourth consecutive period in the 1982 model year that sales have been below year-ago levels. Year-to-date sales slumped further behind 1980.

Nov. 1-10 retail sales numbered 142,143, down 13.17 percent from 163,702 a year earlier. It was the lowest total for early November since 136,921 in 1974. The record for the period is 289,056 in 1971.

The daily selling rate for the period this year was 17,768, down 13.17 percent from 20,463 in 1980. There were eight selling days this year and last.

Calendar-year sales totaled 5,559,127 through Nov. 10, down 3.17 percent from 5,741,246 a year ago.

Chrysler Corp. and Volkswagen of America moved ahead of their year-ago numbers, but General Motors, Ford Motor Co. and American Motors failed to match them. Chrysler sales of 15,309 were up 3.14 percent over 14,843. VWoA reported Rabbit sedan sales of 3,043, up 33.17 percent from 2,285.

GM passenger-car sales dipped 13.61 percent, to 90,811 from 105,123 last year. Ford was down 21.25 percent, to 30,280 from 38,451, and AMC sales were estimated at 2,700, down 10.00 percent from 3,000.

GM earned 63.89 percent of the early-November market, down from 64.22 percent in 1980. Ford slipped to 21.30 percent from 23.49 percent. Chrysler was up to 10.77 percent from 9.07 percent. VWoA cornered 2.14 percent, up from 1.39 percent, and AMC stood at 1.90 percent compared with 1.83 percent a year ago.

Five domestic makes edged ahead of their 1980 sales levels for the period: VWoA was up 33.17 percent; Plymouth was up 24.45 percent; Dodge was up 7.20 percent; Buick was up 6.72 percent, and Lincoln was up 2.88 percent.

Imperial sales plunged 63.64 percent, followed by Chrysler's 34.98-percent decline. Pontiac was down 27.70 percent; Ford was down 23.88 percent; Chevrolet was down 22.07 percent; Mercury was down 17.72 percent; AMC was down 10.00 percent; Oldsmobile was down 9.19 percent, and Cadillac was down 5.13 percent.

Chevrolet Citation climbed into first place in the nameplate sales race for the period. Citation sales totaled 8,820. It was followed by Buick Skylark at 7,984, Ford Escort at 6,861, Buick Regal at 5,553 and standard Chevrolet at 5,492. Sixth place went to Oldsmobile Cutlass Supreme at 5,297, seventh was Chevrolet Cavalier at 4,631, followed by Chevrolet Chevette at 4,490, Plymouth Reliant at 4,474 and Chevrolet Malibu at 3,951.

Chrysler hails sales performance of its K-cars

DETROIT. — Seems like old times. Chrysler Corp. reported it is gratified by the K-cars' sales performances since introduction 13 months ago.

In October, combined sales of Plymouth Reliant and Dodge Aries were 32,337, a 76.98-percent increase over 18,272 a year earlier — their first month on the market. The Ks earned 27.10 percent of the domestic compact market, up from 15.70 percent a year earlier, according to Chrysler.

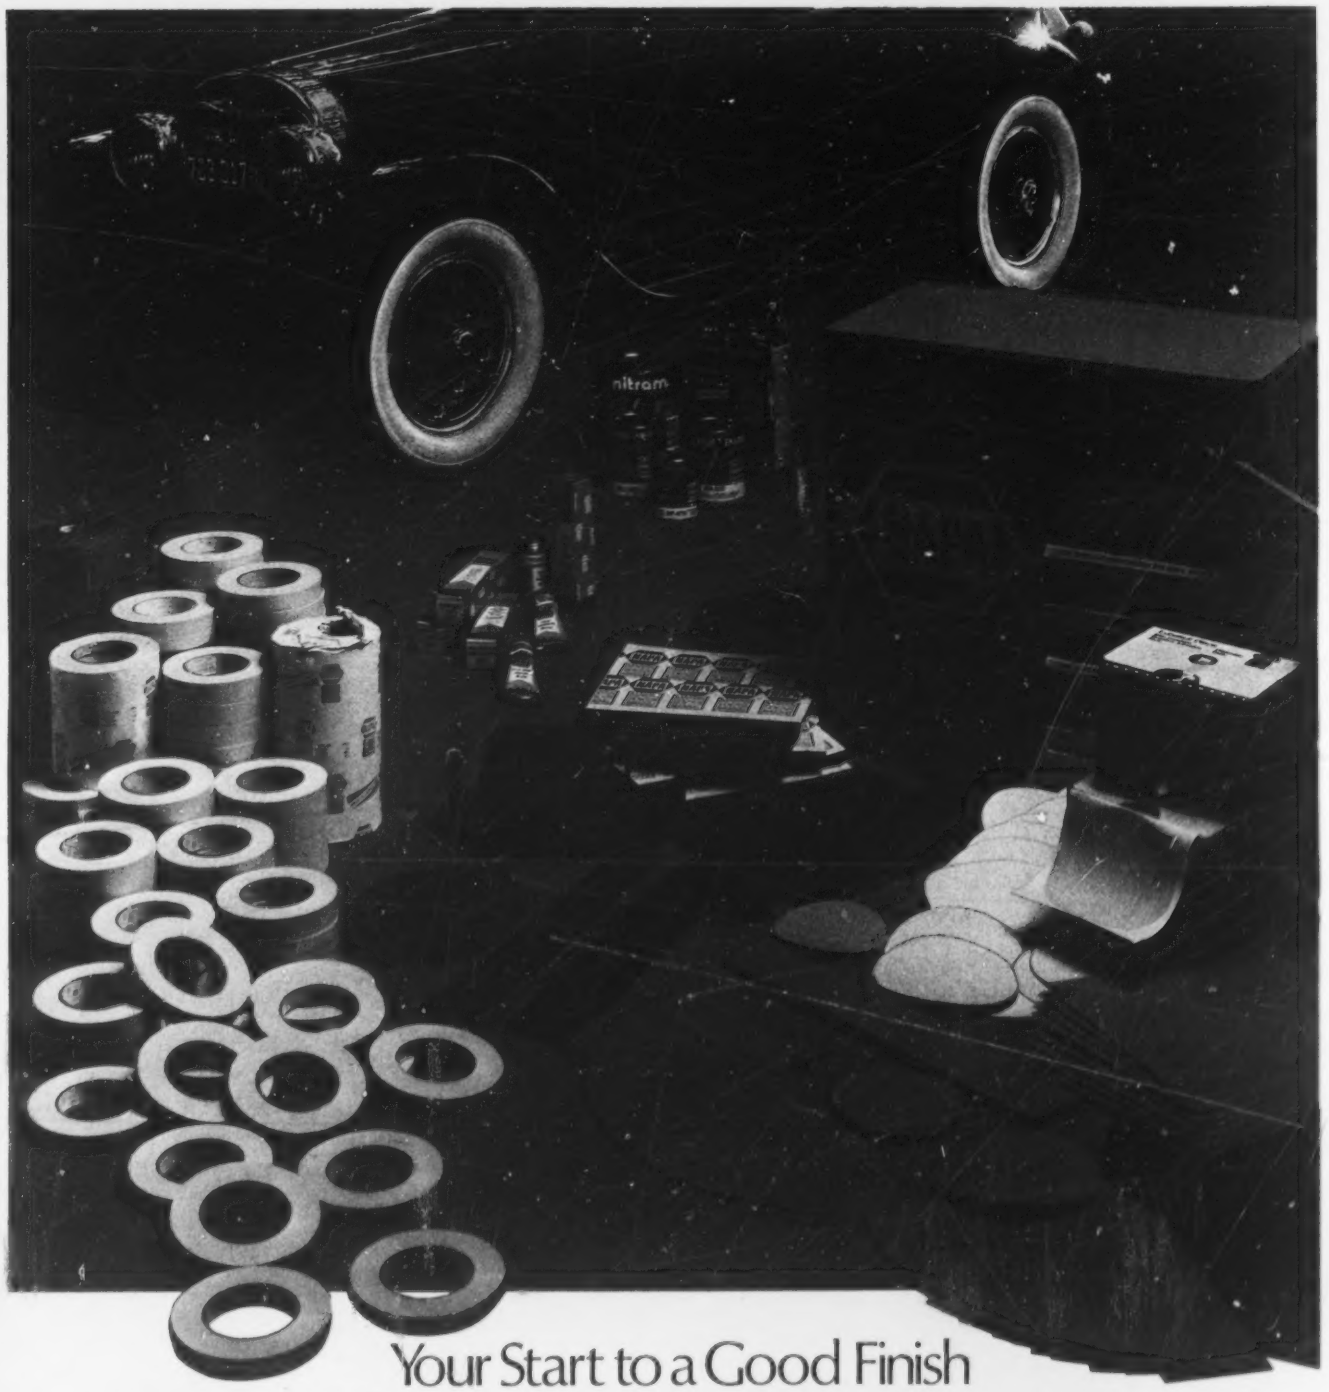
For the first 10 months of 1981, Reliant-Aries sales accounted for 22.70 percent of the domestic compact market, up from 10.20 percent for Volare-Aspen in 1980. Sales were 303,875 compared with 137,313. Reliant was sixth in sales among the domestic nameplates in October.

The reflection of the past? In their first full year on the market (1976), forerunners Plymouth Volare and Dodge Aspen together took 22.96 percent of the January-October compact domestic market class. Their share of the domestic total was 6.46 percent, whereas Reliant-Aries took 5.61 percent this year. Volare was the sixth best seller in October of 1976.

Five years ago, however, Chrysler sales earned 15.46 percent of the domestic market; this year, it was 11.76 percent.

Dealer convicted

PHILADELPHIA.—Joseph L. Doan, vice president of Doan-Calhoun Chevrolet, Inc., was permitted to remain free on his own recognizance pending sentencing on his conviction in Federal District Court of failing to report $22,800 in taxable income for 1975 and 1976.



Your Start to a Good Finish

NAPA/Martin-Senour Abrasives, Tapes, and Adhesives

The best start to a good finish begins with Martin-Senour Quality abrasives, tapes, and adhesives . . . available exclusively through your NAPA jobber. The entire NAPA/Martin-Senour system of over 300 ATA products is shop-engineered and shop-tested to assure no-fail performance in *your* body shop. Best of all, when you start with your NAPA jobber, he'll stay with you right through to the finish . . . because he's your *single source of supply* for every automotive refinishing need: beginning with Martin-Senour ATA and continuing with the full-line of Martin-Senour paint and specialty products. From start to finish, the person to see for every refinishing need is your NAPA jobber. He's got it all!

Paints, Tapes, Abrasives and Adhesives

Duplex offers wide-body chassis

The inside of the cab of its new Model D-350 wide-body custom chassis, according to Duplex Truck Division, The Nolan Co., is nearly a foot wider than conventional cabs, provides six inches of extra head room and a windshield that is 34 percent larger for greater visibility.

Drive, tag tandem close in fuel economy tests

DEARBORN.—A Rockwell International Automotive Operations study comparing tag-tandem and drive-tandem axles for heavy trucks indicates there is statistically little or no difference between a tag-tandem axle and Rockwell's recently-introduced SQ-100 drive-tandem axle in fuel efficiency.

Additionally, the tractive capability of a drive-tandem axle is superior to that of a tag-tandem axle.

These are the general conclusions drawn from a detailed analysis and presented in a paper co-authored by Rockwell engineers Gerald DeClaire and David G. Adams at the recent SAE national truck meeting here.

"The intent of the study, which was conducted in line with the Voluntary Truck and Bus Fuel Economy Program, is to give truck manufacturers and operators a clearer understanding of the two types of axle configurations in terms of fuel economy, traction and other operating considerations," said DeClaire.

In highway testing, using the new joint TMC/SAE fuel-consumption test procedure, the first tandem-drive axle tested was a Rockwell SQHD, while the tag-tandem unit consisted of a Rockwell R-170 single-drive axle in combination with a trailer axle. Driving axles used a 4.11 ratio.

For comparison purposes, a second tandem-drive axle test was conducted using Rockwell's new SQ-100, again with a 4.11

Truck Foundation grants $400,000 to Hall of Fame

MIDLAND, Mich.—The American Truck Foundation directors voted a $400,000 grant to the Automotive Hall of Fame to help honor pioneers and leaders of the truck and trucking segments of the automotive industry.

Drex Minshall, Hall of Fame chairman, called the Truck Foundation grant a major step toward raising the funds necessary for the hall's expansion. Confirmation of the grant was given by Zenon C. R. Hansen, foundation executive vice president and former president of Mack Trucks, Inc.

In 1973, Mack donated $2 million to establish an American

truck personnel

3 appointed by Mack in international sales

Three appointments in its international operations have been announced by Mack Trucks, Inc. They are:

Marion Parks, vice president-area sales for Latin America; **Alexander H. Giel,** vice president-area sales for Middle East/Far East, and **J. Ken McGill,** international accounts director.

Parks, who had been with Chrysler International S.A., will be responsible for export of built-up and knocked-down Mack truck sales and marketing to South and Central America and the Caribbean.

A. H. Giel

J. K. McGill

Giel previously was international heavy-truck marketing manager for International Harvester's Truck Group in the Middle East, Africa and the Far East.

McGill, who had been with a European heavy-truck manufacturer, will be responsible for promotion of Mack products to the international construction and civil engineering industries.

Steggles joins Sun as international V-P

truck industry news

But September gain over year ago is industry's first since 1979

9-month registrations off 12.8 pct.

Registrations of new trucks of all types in the U. S. in the first nine months of 1981 were down from a year ago, but there was one bright feature in the monthly report by R. L. Polk & Co.

September registrations were up slightly from the same month in 1980, and it marked the first time since October, 1979, that statistics for a current month topped those in the comparable year-earlier report.

In September, according to Polk figures, 195,906 new trucks were registered, an increase of 2.9 percent over last year's 190,324. The upturn was paced by light trucks, whose totals exceeded those for September, 1980.

The nine-month count was 12.8 percent below the year-ago level, from 1,910,324 units through September, 1980, to 1,665,676 this year. The totals were down for all three market segments and seven of the eight weight groups.

While the light-truck segment was the only one to show a gain over 1980 in the September report, there were increases in four of the eight weight classifications.

• There were 176,343 light-truck tallies in September, an increase of 4.2 percent over the 168,230 units registered in the same month a year ago. There were gains, too, in the three light-truck groups.

The Group 1 count was 5.9 percent higher than a year ago, from 95,832 in 1980 to 101,484. Group 2's 74,120 registrations were 3 percent higher than the year-ago 71,965, and the Group 3 total was up 70.6 percent to

Table on Page 29

739 units, compared with 433 last year.

During the month, 6,108 medium trucks were tallied, a decline of 2.4 percent from the year-ago 6,256 units.

The Group 5 total was up 9.4 percent, from 138 trucks in 1980 to 151. Group 6 dipped 2.6 percent to 5,957 units, compared with 6,115. There were no Group 4 tallies this year, and only three in September, 1980.

Heavy trucks continue to be the big losers. In September, there were 13,455 registrations of the Groups 7 and 8 vehicles, a decline of 15 percent from last year's 15,838 units.

Group 7 tallies during the month were off 15.3 percent from a year ago, 5,416 units versus 6,395. The Group 8 total of 8,039 registrations in September was a decrease of 14.9 percent from the year-earlier 9,443 units.

• Over the nine-month span, there were 1,503,478 light-truck registrations, a decline of 12.3 percent from last year's 1,713,825 units. Group 3 was the only one of the three classifications to show an increase over last year.

Through September, 9,448 Group 3 trucks were registered, up 77.3 percent from last year's 5,329. Group 1 was down 3.8 percent, from 867,718 a year ago to 834,585 units this year, while Group 2's total of 659,445 tallies was off 21.6 percent from the year-earlier 840,778.

Registrations of imported light trucks for the nine months, on the other hand, were 1.6 per-

Continued on Page 20, Col. 3

HD registrations for 9 months off 18.8 pct. from '80

Nine-month registrations of new heavy trucks in the U. S. dropped 18.8 percent below last year's total, according to R. L. Polk & Co. statistics, from 148,194 units in 1980 to 120,276.

In September, 13,455 Groups 7 and 8 trucks were registered, a decline of 15 percent from the 15,838 units tallied in the same month in 1980.

The count through September was down substantially for both Groups 7 and 8 vehicles.

Over the nine-month span, 50,816 Group 7 trucks were registered, a decrease of 15.8 percent from the year-earlier 60,365. The Group 8 total of 69,460 units was off 20.9 from last year's 87,829.

International accounted for a little more than a quarter of industry heavy-truck registrations

'81 registrations of new trucks off 12 pct. from 1980

Continued from Page 16

cent higher than a year ago. Through September, the count was 235,011 units, compared with 232,330 in the same period in 1980.

Imported - truck registrations accounted for 15.6 percent of total light-truck tallies through September, and 27.8 percent of the Group 1 count. Group 1 registrations accounted for 55.5 percent of all light-truck tallies for the nine months.

Medium-truck registrations in the January-September period totaled 41,922 units, a decline of 13.5 percent from the year-earlier 48,466.

The biggest loser in this market segment was Group 4, where only 11 units were tallied over the nine-month span. A year ago, the total in the like period was 199 units.

In Group 5 through September, there were 1,446 registrations, a decrease of 13.4 percent from the year-earlier 1,670 tallies. The Group 6 count was down 13.2 percent, from 46,597 in 1980 to 40,465 units.

Nine-month heavy-truck tallies totaled 120,276 units, off 18.8 percent from the year-ago 148,194.

Group 7 was down 15.8 percent through September, from 60,365 last year to 50,816. The Group 8 count dipped to 69,460 units, a decline of 20.9 percent from the year-earlier 87,829 units.

HD registrations for 9 months off 18.8 pct. from '80

Continued from Page 16

in the January-September period.

Through September, there were 30,811 Groups 7 and 8 International tallies, 25.62 percent of the industry total. International's penetration was up 6.85 percentage points over last year, when it was in second place with 27,811 tallies and 18.77 percent of the industry count.

• Last year's nine-month leader—Ford—was in the No. 2 spot this year, more than 5,000 units behind International.

Ford registrations totaled 25,545 units and accounted for 21.24 percent of the total. In 1980, Ford accounted for 24.79 percent with 36,731 tallies. Its share of the industry count this year was off 3.55 percentage points from a year ago.

International had a comfortable lead in Group 8 tallies going into the final quarter. It had 16,490 Group 8 registrations, compared with No. 2 Mack's 12,995.

Ford was No. 1 in Group 7 registrations with 18,968 units, more than 4,500 ahead of second-place International, which had 14,521 Group 7 tallies.

Proxmire slaps $100 billion cost overrun

Golden Fleece 'award' to Interstate System

WASHINGTON. — Senator William Proxmire, Wisconsin Democrat, gave his "Golden Fleece" of the month for November to the "Federal Highway Administration for the worst record of civilian cost overruns in the Federal Government."

"Mismanagement, delays and confusion in the construction of our interstate highway system have caused a 267 percent, $100 billion cost overrun that dwarfs any other civil project," Proxmire said.

"While it is said that the road to hell is paved with good intentions, no one expected this to apply to the U. S. highway program."

Proxmire awards a "Golden Fleece" each month for what he considers the biggest, most ridiculous or ironic example of wasteful federal spending.

"When it comes to civilian cost overruns, the Interstate Highway System under the Federal Highway Administration stands at the top of the list — the undisputed champion of mismanagement and waste," Proxmire said. "Every other civilian project pales by comparison.

"Even the numbers involved are so staggering that they numb the mind. When Congress first approved the estimates for the Interstate Highway System in 1958, the firm, hard figures showed a cost of $37.6 billion. Now, that same program stands at $137.9 billion, an increase of $100.3 billion."

Proxmire said that the cost growth in the highway program is as big as the entire defense budget in 1977 or as large as the combined 1982 budget for the Departments of Agriculture, Education, Energy, Housing and Urban Development, Interior, Justice, State and Transportation.

He said the cost overrun cannot be blamed solely on inflation.

"Of the current $100.3 billion overrun, $55.9 billion represents inflation," Proxmire said. "Taking inflation out entirely still leaves an unbelieveable 'real' overrun of $44.4 billion or more than the project was supposed to cost in the first place."

Funding for the Interstate Highway System continues to the present day so the end of cost overrun is not yet in sight, he said.

On Oct. 3, he said, the Senate passed a Transportation Appropriations Bill which contained about $3.2 billion in funding for the system. Proxmire opposed the bill. From $35 billion to $53 billion remains to be spent on the Interstate System, he said.

"Perhaps the worst example of spending in the highway program is the 'Westway' in New York City," Proxmire said. "The final cost of this four-mile-long road will reach an incredible $1 billion per mile making it inch for inch the most expensive highway ever built by mankind any time, anywhere.

"Taxpayers will pay for 90 percent of 'Westway' including the actual construction of a tunnel along and in the Hudson River bed, creation of 234 acres of development real estate and upgrading of a parallel 6-8 lane highway next to 'Westway.'"

He called the Glenwood Canyon Project in Colorado "another example of an outrageous throw-away."

"It has been exempted from the new cost reduction program (as has Westway)," Proxmire said. "This 12.6-mile, four-lane highway is currently estimated to cost $300 million but more likely will run over $600 million during the eight-year construction period."

Volvo for Farrell

SOUTHBORO, Mass. — Farrell Motors, Inc., has been awarded a Volvo franchise. The dealership is headed by Robert P. Farrell Sr.

Officers for Illinois dealers

New officers of the 1,425-member Illinois New Car/Truck Dealers Assn. are: Robert Burrow, seated left, Barrington, chairman of the board; Les Sander, seated right, president; Jerry Higgins, standing left, Peoria, chairman-elect, and Edward Hamlin, Wood River, treasurer.

Chrysler auctions include prizes and discounts

Special cash drawings and price reduction programs will be in effect at Chrysler Corp. closed auctions scheduled during the last half of November.

The "goodies" are designed to bring buyers to the sale early, to encourage them to buy cars and to offer them a chance to win some extra Thanksgiving money, according to Chrysler Corp.'s Fleet Division.

To qualify for the early-bird drawing, which has prizes worth $300, entrants must be dealers of record on the date of the sale and be in attendance and register before the sale begins.

To qualify for the price reduction program, dealers must plan to purchase a minimum of three vehicles. Then, $100 will be discounted from each sale invoice after three units are purchased.

Chrysler Corp. dealers of record are also eligible to win cash prizes totaling $1,000 in drawings made at the conclusion of the sale. Dealers must be present on this occasion and can win more than one prize. There is one prize of $500, one of $300 and one of $200.

Chrysler Corp. has scheduled 12 closed auctions in late November: Hatfield, Pa.; Pittsburgh; Los Angeles; Mason City, Ia.; Darlington, S. C.; Houston; Boston; Taylor, Mich.; Chicago; Kansas City; Minneapolis, and Evansville, Ind.

Tires for imports

A final finish employe at Kelly-Springfield Tire Co.'s Fayetteville (N. C.) plant checks metric-sized radials for imported automobiles. Replacement sales for imports are expected to account for about 12.4 million units in 1981.

Domestics drop 35 pct.

Canadian cars suffer worst setback of year

Sales of North American-built passenger cars in Canada declined in October, their 10th consecutive monthly dip and biggest drop of 1981 compared with year-ago levels. Truck sales suffered their ninth off-month and their worst difference with the preceding year.

Car sales dropped 35.61 percent to 46,401 from 72,066 in 1980. Ford of Canada, suffered a sharp decline, its October sales off 41.39 percent to 9,302 from 15,870 last year. General Motors of Canada reported a 38.51-percent drop, to 26,234 from 42,665.

Chrysler Canada dealers sold 8,902 new cars, down 14.92 percent from 10,463. American Motors sales of 1,328 were down 43.59 perecnt from 2,354 a year earlier, and Volvo Canada dipped 11.06 percent to 635 from 714.

GM's share of the October market dropped to 56.54 percent from 59.20 percent. Ford sales accounted for 20.05 percent, down from 22.02 percent. Chrysler expanded to 19.18 percent from 14.52 percent. American Motors was down to 2.86 percent from 3.27 percent, and Volvo was up to 1.37 percent from 0.99 percent.

Ten-month sales of North American-built passenger cars totaled 546,722, down 15.17 percent from 644,493 in 1980.

Truck sales in Canada by the major manufacturers, including captive imports, totaled 15,518 in October, down 42.74 percent from 27,103 last year.

GM truck sales were down 44.49 percent, to 7,671 from 13,818. Ford reported sales of 5,769, down 40.50 percent from 9,696. Chrysler was down 40.04 percent, to 1,806 from 3,012, and AMC Jeep sales dropped 52.86 percent, to 272 from 577 a year earlier.

Truck sales for the first 10 months of the calendar year totaled 207,475, down 18.58 percent from 254,820 in 1980.

Atlanta dealer charges Ford, Ford Credit with conspiracy

ATLANTA. — Allen-Russell Ford, Inc., and its owner and president, James H. Allen, have filed a multimillion-dollar legal action against Ford Motor Co., Ford Motor Credit Co. and a Ford Credit branch manager. The suit charges a "conspiracy" to drive the dealership out of business.

The action followed a lawsuit filed against Allen-Russell Ford in U. S. District Court in September by Ford Motor Credit Co., contending the dealership owes $1.8 million for floor planning and security agreements, plus $32,000 in accrued interest.

The defendants filed a $350 million counter-claim and two additional lawsuits, each seeking $100 million in general damages and $250 million in punitive damages.

In one of the legal actions, the dealer said Ford Motor Co., Ford Motor Credit and its branch manager, Paul Sanders, had "the intention of driving the defendant (Allen-Russell) out of business" and appropriating the Allen-Russell property. The action alleged that Sanders had "a personal vendetta" against Allen.

In the counter-claim, Allen-Russell charged that the reason the company was sued by Ford Motor Credit Co. was "for the purpose of forcing (Allen-Russell) to provide (Ford Motor Credit Co.) with releases from certain other persons and to obtain unfair advantage to allow (the credit company) to purchase real estate owned by (Allen-Russell's) shareholders at . . . unfair market price."

Allen alleged that he was "harassed and intimidated" by the defendants and was caused "mental and emotional distress."

In Dearborn, Ford Credit's legal office said, "The suits are without substance or merit and will be vigorously defended."

The Allen actions, as well as the dealership's were filed in Fulton Superior Court.

Few surprises in products, lines from EPA list

DETROIT.—Looking for new-product spy stories in this year's EPA mileage ratings can prove disappointing.

Take the Legend Spider Turbo—a two seater with a two-liter engine from an apparently new company.

Turns out Legend Industries, which fits a turbocharger to Fiat Spiders, gets its name on the government list because it is officially the final manufacturer of the same car which has been distributed by Fiat here since mid-1981.

Then there is Mitsubishi, which certified under its own name the same vehicles it builds for Chrysler Corp. Could the Japanese maker be planning to market U. S. vehicles under its own name in 1982, one year year ahead of schedule?

No, said representatives of MMC Services, the company's Michigan affiliate. The light trucks and subcompacts are simply headed for Puerto Rico and must meet EPA rules.

Neither is Suzuki—or its new partner General Motors—planning to market its light four-wheel-drive vehicles in the continental U. S.

The SJ410 will continue to be sold

As Korean car maker prepares for new FWD car

Mitsubishi to buy stake in Hyundai

TOKYO.—In what would become the first case of a Japanese auto maker investing capital in a South Korean auto firm, Mitsubishi Motor Corp. has decided to take a stake of about 10 percent in Hyundai Motor Co.

Mitsubishi already licenses Hyundai to make its Saturn engine.

A recently signed technical assistance agreement calls for Mitsubishi to supply Korea's largest auto maker with technology on engines, transaxles, chassis parts and emission controls.

Mitsubishi also will be a consultant for construction of a $550 million plant which could build up to 300,000 vehicles a year. It will be built adjacent to Hyundai's current plant in Ulsan.

The cars built there will be small, front-wheel-drive autos, powered by 1.2 or 1.4-liter gasoline engines designed by Mitsubishi. Hyandai plans to export about half of production.

• With the new plant, Hyundai would have a total annual capacity of about 440,000 vehicles. Worldwide recession and high fuel prices meant Hyundai built only 65,000 vehicles in 1980, in a plant with capacity for 140,000.

Hyundai has targeted Britain to be its major export market for 1982. It expects to sell about 5,000 of its small, rear-drive Pony models there in 1982. The London-based Financial Times reported that figure could rise to 12,000 Pony sales by 1985.

Right now, Taiwan is Hyundai's top export market, with 3,500 sales in 1980, the Times said.

The agreement is expected to strengthen Hyundai's hand following the government-ordered reorganization of the Korean auto industry.

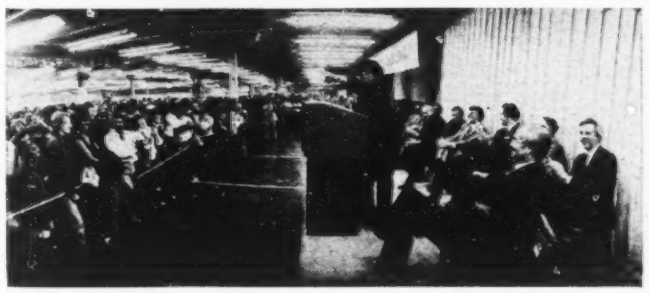
It left only Hyundai and Seahan Motor Co. producing cars. Seahan, in which General Motors has a stake, assembles kits from GM and its affiliates and is expected to offer the forthcoming minicar, GM's S-body.

Word from Mitsubishi is that Hyundai invited the Japanese maker to make the capital investment. Mitsubishi said it plans to do so "in the near future"—believed to be in six to 12 months.

The investment would be made by Mitsubishi Motor Corp. —in which Chrysler owns a 15-percent stake — and its sister trading company, Mitsubishi Corp.

Despite its now-indirect link to Chrysler, Hyundai assembles Ford kits — the Ford Cortina supplied by Ford's Japanese affiliate, Toyo Kogyo, and a few European Granadas.

Hyundai also is negotiating with North American Classics Corp., principally owned by a group of U. S. Ford dealers. If that deal pans out, the Korean firm would build fiberglass replicas of 1957 Thunderbirds for sale in the U. S.



Chrysler crews hear Pearl's wisdom

Pearl Bailey, at podium, praises workers at Chrysler Jefferson plant for "a job well done" on K-cars. Among Chrysler executives on hand for the entertainer's plant visit were Chairman Lee Iacocca, right foreground, and, seated behind him, Hal Sperlich, president, North American Automotive Operations.

GM maps 'Road to Survival'

Continued from Page 1

ployes can cause serious harm to corporate credibility."

It also suggests that management be open about the company's situations, both bad and good, telling workers what's happening before they hear it from other sources. The program also encourages management to be sure union representatives are involved in every step.

But the UAW sees the program as an attempt by GM to bring its view of collective bargaining "into the workplace and to spoon-feed it to a captive audience."

The strategy behind the "Road to Survival" program is not new. GM has been sending films on the state of the business out to its employes for the past six years. This time, however, they are geared toward telling employes sacrifices must be made.

Couple buys 48th car from Shively C-P

CHAMBERSBURG, Pa. — Mr. and Mrs. David H. Lehman have purchased their 48th car from Shively Motors Inc (Chrysler-Plymouth). Their latest purchase was a Plymouth Reliant.

Dealer fails in attempt to block L-M outlet

LITCHFIELD, Conn. — The Ford Dealer Policy Board has rejected a dealer's appeal to block the appointment of a Lincoln-Mercury point near the dealership.

The dealer, McLaughlin Ford-Mercury, of Litchfield, brought suit against Ford Motor Co. in an attempt to stop the appointment of Greentree Toyota as a Lincoln-Mercury dealer in Brookfield, Conn. McLaughlin maintained that granting the franchise would violate the dealer franchise agreement which specifies that a minimum of 10 miles between points is required. In this case, it would be 7.5 miles.

A state court issued a temporary injunction against Ford and ordered a hearing before the Dealer Policy Board. The state court stressed it would not decide on business policy of Ford Motor Co.

Working under the court order, the Dealer Policy Board decided that Ford Motor Co. is entitled to representation in the area and that "the Lincoln-Mercury Division has diligently explored the alternatives available to it."

"The only feasible alternative available to it is appointment of Greentree," the board concluded.

The board asserted that the appointment would not have a "substantial adverse effect on McLaughlin."

Basing its conclusions on presentations made by both McLaughlin and Ford, the board said that financial data made available to it showed that McLaughlin "is in serious financial difficulties."

The board said this stemmed "from its inability to perform as an average Ford dealer and, more particularly, as an average Mercury dealer."

The board then upheld the appointment of Greentree Toyota as the Lincoln-Mercury dealer.

California rejects changes in EPA emissions tests

SACRAMENTO. — The California Air Resources Board, which has its own ideas on how to protect California's special environment, told the auto industry it will not accept all the changes EPA has ordered in the federal emission-control certification program.

EPA ordered the changes earlier this month and claimed they would save the industry $5 million to $15 million annually.

The changes generally are aimed at simplifying federal procedures and limiting the number of vehicles which must be tested.

CARB, which administers a separate certification program for cars sold in California, said in a notice to the auto makers that it can live with only nine of the 13 proposed changes.

The four it rejected are the durability-data test interval; scheduled maintenance; emission-data vehicle selection and reconfiguration, and interpolated 4,000-mile durability-data point line crossing.

CARB said it will not be as flexible as the EPA on durability-data test intervals. It will require auto makers to test, at a minimum, at 5,000 and 50,000 miles and three other test points in between. Anything less than this will not produce representative durability data, CARB said.

• The environmental agency said it also isn't buying EPA's plan which will allow manufacturers to revise their maintenance schedules after durability testing begins.

"CARB is of the opinion that a durability-data vehicle should not be used to develop maintenance schedules," the agency said. "A maintenance schedule should be developed and designed into the vehicle by extensive test verification and should be identified prior to mileage accumulation."

CARB said it also saw no reason to make any changes in the current regulation for line crossing allowances. It therefore will not go along with EPA's change to allow for it in durability vehicles as long as the 5,000-mile actual test point and the 50,000-mile interpolated points are both below the emission standard.

CARB noted, however, that in order to avoid additional testing by the companies, it will review such instances on a case-by-case basis.

In another attempt to avoid additional testing, CARB said it will require just two emission-data vehicles for certification testing. The first selection will be based on the highest-sales-volume unit and the second based on the highest expected emissions level.

Previously, when EPA and CARB tested engine families for emissions, they picked one vehicle based on highest projected sales and two or three vehicles based on expected "worst-case" emissions.

In the future, EPA will allow manufacturers to choose and test a single vehicle for each engine family. They may satisfy any additional testing requirements for that engine family by reconfiguring and retesting that same vehicle, as long as only a single engine/emission-control-system combination is involved.

CARB said this is just not sufficient, as far as it is concerned.

Gengras elected

WEST HARTFORD, Conn. — E. Clayton (Skip) Gengras Jr., a second-generation automobile dealer, has been elected to the West Hartford Town Council. His father was a Ford dealer; the younger Gengras owns Clayton Motors (Dodge-Volvo).

But total is 24 pct. below year-ago period

Week's car output rises to 119,363

By Patricia Hoffman
Staff Writer

Although seven plants were idle last week for changeover/inventory control, U. S. auto production managed to pull ahead of the previous week's total as several assembly plants returned.

Among the returnees was Chrysler Belvidere, which had been idle three weeks for conversion to the front-wheel-drive Dodge Rampage pickup truck. Belvidere resumed car production Nov. 16, and truck assembly began Nov. 18.

Last week's output was estimated at 119,363 cars, up 21 percent from 98,652 the previous week, but the total dropped 24.10 percent below that of the comparable 1980 week.

Breakdown for the week by company is: General Motors, 67.78 percent; Ford Motor, 21.17 percent; Chrysler Corp., 8.88 percent; American Motors, 2.14 percent and Checker Motors, 0.03 percent.

Volkswagen of America began a three week shutdown last week (Nov. 16) to control inventory. The plant is slated to return to work Dec. 7.

Checker Motors went down Nov. 18 for an extensive changeover period. The facility is slated to return Jan. 11.

GM's Janesville point continues on a five-month shutdown for changeover to the J-car. The facility has been idle since Oct. 19.

Also at GM, the second shift at the Willow Run plant was idle last week for the third week of inventory adjustment. The facility is scheduled to resume operations today (Nov. 23) with a line-rate reduction from 70 units an hour on two shifts to 50 units an hour on two shifts.

GM's Bowling Green (Corvette) plant returned last week after one week of downtime to adjust inventories.

The second-shift production of Cimarrons and Cavaliers at GM's Southgate assembly plant will be eliminated beginning Nov. 25.

GM's Linden facility will reduce output of the Eldorado, Seville, Toronado and Riviera from 56 units an hour on two shifts to 45 an hour on two shifts beginning Nov. 30.

Also at GM, the Lordstown and Leeds plants will go down Dec. 7. Lordstown is slated to return Jan. 4, and Leeds is scheduled to resume production Jan. 11. Lordstown will be idle because of high inventories of J-cars, and Leeds is changing over to Buick and Oldsmobile J-cars.

Ford's Metuchen and San Jose facilities were idle for the third week last week to control inventories. Ford's Dearborn, Chicago and Lorain points resumed operations last week after a two-week shutdown for inventory adjustments.

Chrysler's Newark facility was idle last week due to high inventories. The point, which closed Nov. 9, is slated to resume today.

All car assembly points will be idle Thursday and Friday (Nov. 26-27) for the Thanksgiving Day holiday.

Truck production up a bit; first Dodge Rampage built

Despite downtime at five assembly plants last week, domestic truck production rose slightly above the previous week's output.

Chrysler Corp. began production of its front-wheel-drive Dodge Rampage pickup at the Belvidere assembly plant, and Ford Motor resumed operations at its Twin Cities facility after a two-week shutdown for inventory adjustment.

Last week's truck production was targeted at 26,484 units, up 1.28 percent from 26,149 in the previous week, but down 34.43 percent from 40,389 in the comparable 1980 week.

Operations at American Motors Toledo (Jeep) facility were halted last week (Nov. 16) for inventory adjustment. The plant is slated to return today (Nov. 23).

Also idle last week for inventory control was Volkswagen of America's Westmoreland point. Operations are scheduled to resume Dec. 7.

Ford's Lorain truck facility was idle for the second week last week to adjust mounting inventories.

General Motors' Flint (Chevy Line Two) facility was idle last week for the second week of downtime due to a parts shortage.

Chrysler Corp.'s Newark assembly plant was closed last week for inventory adjustment. Operations are slated to resume today.

Chrysler Belvidere became the company's first automotive assembly plant to build both front-wheel-drive cars and trucks off a common assembly line. The Rampage is also the first truck ever in the Belvidere plant.

The line rate at the facility will eventually accelerate to 72 units per hour, including about 20 trucks. The Rampage will be introduced in dealer showrooms on Jan. 7.

All truck points will be idle Thursday and Friday this week due to the Thanksgiving Day holiday.

Ford downtime cuts Canadian car production

Despite an increase in the line rate of General Motors' new A-cars at the Oshawa (No. Two) plant and the one-day holiday closing by three auto companies the previous week, Canadian auto production fell slightly last week due to downtime at Ford Motor's St. Thomas point.

Last week's auto production was targeted at 16,854 units, down 5.74 percent from 17,881 completed the previous week when assembly was halted for one day at Ford, Volvo and Chrysler Corp. due to the Remembrance Day holiday. Output also dropped 18.68 percent below the 20,726 in the comparable 1980 week.

So far this year, the auto manufacturers have assembled 728,190 units, a drop of 3.02 percent from 750,836 in the comparable period last year.

Truck production rose 15.33 percent last week to 11,531 units from 9,998 in the previous week when output was held back by the short work week at Ford and Chrysler. Output also rose 7.92 percent above the 10,685 units in the comparable 1980 week.

GM completed the second week of A-car production last week at Oshawa No. Two. The plan resumed operations Nov. 9 after being idle since Aug. 6 for changeover. It will gradually increase A-car output until the full line-rate of 45 units per hour is reached in January.

Also at GM, the St. Therese car facility has slated an extended Christmas shutdown beginning Nov. 30 because of the sales famine in the U. S.

Ford's St. Thomas car facility, which had been idle for inventory control since Aug. 31, returned Nov. 10, but closed again last week, also to control inventories. The plant is slated to resume operations today (Nov. 23).

Little hope seen for prospects of Clean Air relief

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—The Senate Environment and Public Works Committee last week threw cold water on the auto industry's hope for any relief from Clean Air Act requirements.

Drafting amendments to the landmark legislation, the committee voted by substantial margins to accept amendments offered by Senator Gary Hart, Colorado Democrat, to force heavy-duty truck makers to meet the act's original requirement for a 90 percent reduction of their HC and CO emissions by the 1984 model year.

The amendment would also require light-duty truck makers to meet similar 90 percent reduction requirements for HC and CO in 1984 in addition to a NOx standard of 1.2 grams per mile for light trucks with gross vehicle weight ratings of 6,000 pounds or less and a 1.7 grams per mile NOx standard for those with GVW of 6,000 pounds to 8,500 pounds.

Light-duty diesel makers would have to meet only a 1.5 grams per mile NOx standard through the 1984 model year.

In so doing, the committee dashed a lot of hope the auto industry had for Clean Air Act relief and soundly slapped the current EPA hierarchy and the Reagan Administration for trying to roll back emission standards for cars and trucks administratively in the guise of relief for the U. S. auto industry.

The EPA and the Reagan Administration had said as early as April of this year that heavy-duty truck standards for the 1984 model year would be eased so that catalytic converters would not be necessary to meet the standards and that light-duty truck standards for NOx would not be lowered beyond the current requirement of 2.3 grams per mile.

The heavy-duty truck proposal to that effect is on the desk of EPA Administrator Anne Gorsuch at the moment.

If Hart's amendments survive full Senate consideration, a conference with the House, final Senate consideration and Presidential action, they would obviate the EPA-Reagan proposals and effectively require auto makers to put the sophisticated three-way feedback emission control systems now common on passenger cars, on light duty trucks and catalytic converter emission control systems on heavy-duty trucks.

Such additions should add no more than $472 to the price of a heavy-duty gasoline truck, Hart said. He said this cost should be easily offset by a reduction in fuel and maintenance costs.

Hart said he obtained those figures from EPA's own analysis of the regulation as the agency had proposed it prior to the election of President Reagan.

The auto makers, needless to say, were not pleased by the developments. A General Motors spokesman said: "The action can

Clenet's third series

Two-seat Asha bows

Clenet Coachworks, Santa Barbara, Calif., has unveiled a new two-seater, the Asha. The steel unibody car is built with Lincoln-Mercury mechanicals and features such details as matched-grain burl walnut, Connolly leather, lambswool, crystal accessories and a sliding roof panel for open-air motoring. Five hundred of the Series III are to be built; price is $78,500 FOB Santa Barbara. Story on Page 55.

RV makers see bright prospects

By Jack Walsh
Truck & RV Editor

Manufacturers of recreational vehicles and chassis suppliers think prospects for sales increases in 1982 are exceptionally bright and offer a number of good reasons for their optimism:

Factory shipments of RVs to dealers in the first nine months of 1981 topped those for all of 1980, high interest rates appear to be moderating, fears of growing inflation are subsiding and concern over fuel availability has all but vanished.

While the outlook is heartening, manufacturers and dealers will have to increase their marketing efforts in the coming year to turn the sales potential into reality, industry experts agreed on the eve of the opening of the annual national RV show this week (Dec. 1-4) in Louisville.

James T. Riley, GMC Truck & Coach general sales manager, said RV sales next year could be the industry's best in four years if there is an improvement in the economy.

Introduction of the new Chevrolet 6.2-liter diesel engine in both Chevrolet and GMC light trucks is one big reason for Riley's optimism for the RV market in 1982.

• "The brighter outlook for 1982 can be attributed in part to the use of more fuel-efficient diesel engines," Riley said. "In fact, 1982 could well be the 'year of the diesel' for the RV industry."

Sales of all types of RVs should be up 25 percent over those for 1981, in the opinion of Keith D. Corson, president, Coachmen Industries, Inc.

"There is a growing pent-up demand for RVs as demonstrated by the attendance at the highly successful shows across the country," he said. "Fuel supplies are in good shape and prices have stabilized somewhat.

"In addition, the trend toward more leisure time and the desire to spend that time out of doors continues," he said.

Fred G. Emmert, marketing vice president, Winnebago Industries, Inc., noted that dealers will have to merchandise their products more aggressively in 1982 to offset money and other problems.

"Against a background of high interest rates and economic uncertainty, the RV industry is faced by problems of sticker shock, financing and inventory control in the next year," he said.

"To offset these conditions, dealers will have to work harder to make sales and will have to use all the merchandising tricks of the trade," he added.

Robert C. Honke, Ford Division recreational vehicle sales manager, said the company's RV plans "are based on year-to-year increases of from 25 to 30 percent in the RV market, with most of the growth in the motorized-vehicle segment.

"We see an upward trend in the market during 1982, especially as consumer confidence grows and interest rates moderate," he added.

Dealers invited to Riegle fund-raiser

DETROIT. — Some 50 to 60 Detroit-area auto dealers have been invited to a $500-a-plate dinner Dec. 11 to support Senator Donald Riegle's bid for reelection in 1982. The dinner was organized by Martin J. (Hoot) McInerney, who heads Chrysler-Plymouth and other dealerships, and the hostess is former Congresswoman Martha Griffiths, a Chrysler Corp. director. Some Chrysler dealers received a letter from Chrysler Chairman Lee Iacocca urging support for the fund-raiser. Riegle, a Michigan Democrat, helped get the Chrysler Loan Guarantee Act passed.

Belt use ordered by Peck

WASHINGTON.—An order from Administrator Raymond A. Peck says that after Dec. 1, all NHTSA employes using federal cars on official business must wear seat belts.

Ford recalls 4,000 T-birds, XR-7s

DEARBORN.—Ford Motor Co. is recalling 4,000 '82 Ford Thunderbird and Mercury XR-7 models with 3.8-liter V-6 engines because carbon monoxide emissions may exceed certification standards. Ford said the correction involves replacement of a carburetor part and that the condition has no effect on fuel economy or driveability.

EPA reeling under threat of budget slash of nearly half

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — EPA, already reeling under the impact of new Administrator Anne Gorsuch and Reagan Administration budget cuts, would be nearly halved under a 1983 budget proposal put forward by the Office of Management and Budget.

Gorsuch, who has herself proposed an 18-percent budget slash for her agency in 1983 atop the 16 percent she had proposed for fiscal 1981-82, was described by EPA sources as being "outraged" by OMB's proposed 36-percent cut for 1983.

The EPA's operating budget for 1981 is $1.35 billion. If the OMB cuts for 1983 were to become effective, this would be cut to $700 million. Gorsuch reportedly told OMB that cuts of that magnitude would throw the agency into complete disarray. They cannot be defended or supported by any analysis, she has told OMB director David Stockman, and in addition amount to a disastrous political blunder.

Gorsuch, who has been under heavy criticism for her stewardship of EPA, fears that if cuts beyond those she has suggested are enacted, the bad press she has endured will spill over onto the President himself as well as the Republican party.

"Cutting EPA's budget in 1983 to $995 million as I have suggested can be defended on the grounds that we can still perform our bedrock functions," she reportedly told her aides, "but anything like Stockman wants is going to be big trouble."

OMB's cuts would chop EPA's hazardous waste control program 65 percent from 1981 levels, its research programs by 32 percent, its pesticide regulations by 42 percent and research by 38 percent. Contracting funds would be cut by 62 percent and the sewer construction grants program would lose $1.4 billion.

Additionally, another 1,000 employes would need to be slashed from EPA's roster leaving the agency with about 7,340 staff members as compared to the current level of 10,400.

For the auto industry, further cuts in budget and personnel, especially of the magnitude suggested by OMB, would likely result in more delays in the certification process and enforcement functions would be curtailed sharply.

Gorsuch's strong objections to the proposed budget cuts notwithstanding, there are rumors floating about the Capital that she leaked the proposed budget cuts as part of a top-level White House effort to con-

Employe purchase plans die

Ford will close plants in Alabama, Michigan

By Marjorie Sorge
Labor Editor

DETROIT. — Ford Motor Co. failed to sell two plants last week, one by its choice and the other by its workers' choice.

After weeks of discussion between management and workers, 940 unionized employes at Ford's Sheffield (Ala.) aluminum casting plant decided last Monday (Nov. 23) not to buy the operation. Now the plant will close in a two-year phase-out.

And in a last-ditch effort to prevent closing, the 75 workers at the company's Northville (Mich.) valve plant tried to buy the facility in a three-part, $3 million plan calling for employe stock ownership, profit sharing and a commitment from Ford to continue to buy valves.

The company rejected the proposal and the plant will be closed by the end of the year. Ford began phasing out the operation about a year ago.

M. L. Jurosek, general manager of Ford's Engine Division, said, "We would be doing a real disservice to our employes to allow them to gamble their life savings on a venture that just won't work."

At Sheffield, workers told the company its plan just won't work. Ford had offered to let the workers buy the operation under an Employe Stock Ownership Plan (ESOP) after workers rejected Ford's overtures to provide a profit-sharing plan but cut wages and benefits by 50 percent. Ford had said if the workers did not buy the plant, the closing was definite.

• At last week's meeting, members of UAW Local 255 told Ford officials they wanted a plant closure agreement with a special early retirement plan as a pre-condition before they continued buyout discussions. Ford rejected that plan.

A special retirement program provides benefits for workers who are 55 years old and ends when they reach 62 and Social Security kicks in. It is geared toward protecting older workers who might not be able to find new jobs when a plant closes. It requires 10 years' seniority for eligibility.

Under the special retirement benefit, workers with 20 years' seniority would get $8,000 a year regardless of whether they were employed elsewhere, according to a Ford spokesman. Of the 940 production workers at Sheffield, 618 qualify for special retirement benefits and 147 are eligible now.

If a special retirement benefit were granted it could cause some inequities, company insiders said, because the older workers could be hired back into the new worker-owned facility and still collect the retirement benefit. The younger workers, however, would be getting only the standard wage.

But UAW Local 255 President Lavoye McCanless said the workers felt they might not get their retirement benefits under the ESOP program and wanted them now.

Some union insiders say Ford had an instant lack of credibility in the plant when officials asked for a 50 percent cut in wages and benefits and issued an ultimatum of either accepting company terms or seeing the plant closed. They said there were immediate hard feelings and bad attitudes among employes who considered the proposal a slam on their abilities.

Also, the wage and benefit cut was against the UAW constitution which prohibits its locals from accepting such concessions without the vote of all Ford-UAW members.

But had the workers bought the plant, they would not be part of the national agreement and could take the cuts. Ford officials had already told the Sheffield workers they felt a 50 percent wage and benefit cut would still be needed to make the operation successful even with a buyout.

The average employe at the plant makes $13.39 an hour in wages and another $7.71 per hour in benefits for a total cost of $21.10. Ford had proposed a cut in wages to $7.72 per hour and a cut in benefits to $2.83 per hour for a total labor cost of $10.55 per hour.

Since the workers have rejected both proposals, the phase-out will begin almost immediately. About 171 workers will be laid off by March, 1982, but that number may vary based on the production volume.

"We must now find the most humane system to take care of our employes," a Ford spokesman said.

The unemployment rate in the Sheffield area is 12 percent.

U.S. sales plunge to 22-year low in mid-November

By Jenny L. King
Staff Writer

Mid-November domestic new-car sales limped along at 20-year-ago levels, with the period down 30.10 percent from 1980 and the daily selling rate at just 16,561. Retail sales totaled 149,046 this year compared with 213,235 a year ago.

Nov. 11-20 sales were at their lowest point since the 139,685 recorded back in 1959. Best total was 307,302 in 1971. The period was up 4.86 percent over 142,143 the first 10 days of the month, but there were nine selling days mid-month and the daily rate was down 6.79 per-

Diesel car sales up 32 percent

By Jim Plegue
Staff Writer

Diesel automobile sales continue to be one of the few bright spots in an otherwise grim sales year in the U. S., notching a 32.12-percent increase during the first 10 months of 1981.

Consumers purchased 443,598 diesel-powered cars from Jan. 1 to Oct. 31 of this year, up from the 335,736 diesels sold during the equivalent 1980 period.

As has been the case all year long, diesel sales have defied the overall U. S. car sales trend. Cumulative sales of domestic new cars are running about 3 percent behind last year's dismal showing. Import sales to-date are down about 2 percent.

General Motors continues as the undisputed diesel sales leader. The corporation's dealers sold 269,242 diesel-powered cars during the Jan. 1-Oct. 31 period, a whopping 46-percent increase over the 184,407 sold during the comparable period last year.

• General Motors captured 60.69 percent of the U. S. diesel market, an increase of more than five points from the 54.93-percent share it held during the comparable 1980 period. All GM divisions except Cadillac posted sales gains during the period.

Oldsmobile, source of all domestically built GM diesel engines, sold more diesel automobiles than the other divisions combined. There were 138,229 Olds diesel models retailed from Jan. 1 to Oct. 31, up 31.60 percent from the 105,032 sold during the equivalent 1980 period.

But Oldsmobile's market share of 31.16 percent was actually a slight drop from last year, while Buick, Chevrolet and Pontiac substantially increased their sales and penetration. Buick's sale of 41,089 diesel units was up 183.27 percent from last year. Chevrolet more than doubled its diesel volume for the period and Pontiac was up 43.84 percent.

During the 1981-model year, GM offered the Olds-built 5.7-liter V-8 diesel in many of its standard and intermediate models and an Isuzu-built 1.8-liter diesel four in the Chevrolet Chevette. A new Oldsmobile-built 4.3-liter V-6 diesel debuted for 1982 in the new front-drive A-body cars.

Combined Volkswagen / Audi diesel sales for the period dropped slightly, but the company funneled more of its diesel engine output into its pickup truck. Diesel pickup truck sales more than doubled during the period.

• The small reduction in VW/Audi diesel sales was accompanied by a much larger 7.8-percentage-point drop in market share — from 31.40 percent to 23.90 percent this year. This was due to GM's substantial gains and the increase in the number of imported diesel offerings.

VW offered a diesel engine in the '81 Rabbit, Dasher and Jetta and, for 1982, the Quantum and Vanagon. Audi offers diesel power in the 5000 model and added a diesel 4000 for 1982.

Among the smaller importers, Peugeot registered the largest gain for the period. The company sold 12,398 diesel and turbo-diesel 505 models and a few of its new 604 turbo-diesels during the period, up 42.94 percent from the 8,673 sold last year.

Mercedes-Benz reported a 22.87-percent boost in sales during the period, although the German maker's market share was shaved by over half a point. Diesels account for 78 percent of total Mercedes-Benz sales.

Isuzu, which entered the U. S. market in April of this year, sold 8,086 diesel-powered I-Mark models during the period, accumulating a 1.82-percent share of the market. Datsun sold 5,999 diesel-powered Maxima models during the period. The diesel Maxima, introduced in June, accounts for about 38 percent of total Maxima sales.

Volvo sales do not accurately reflect that maker's diesel potential. The company was unable to certify a 1981-model diesel engine and sold 1980 and 1982-model diesels during the Jan. 1-Oct. 31 period.

During the 1981 model year General Motors sold 317,691 diesel models, up 54.62-percent from the 205,456 sold during the 1980 model year. All divisions except Cadillac posted gains.

New-car registrations rise for month

By Jenny L. King
Staff Writer

The fruits of August's end-of-model-year rebates on domestic cars were harvested in September, according to registration figures compiled and reported by R. L. Polk & Co. September domestic registrations were up from August of this year as well as up from year-ago September levels.

New-car registrations in September totaled 762,792, up 5.83 percent over August's 720,804, and up 8.64 from the comparable month of 1980 when they numbered 702,111.

Record registration total for September is 912,473, notched in 1977.

Domestic new-car registrations totaled 553,362, up 13.00

Table on Page 19

percent over 489,682 a year ago and up 7.39 percent from 515,682 in August. Registrations of new imported cars totaled 209,430, down 1.41 percent from 212,429 in September of 1980.

For the first nine months of 1981, new-car registrations totaled 6,564,329, down 0.14 percent from 6,573,317 last year. Domestic registrations for the nine months numbered 4,668,568, off 0.13 percent from 4,674,858 a year earlier. Year-to-date import registrations totaled 1,895,761, down 0.14 percent from 1,898,459.

• American Motors, Chrysler Corp. and Ford Motor Co. all increased their shares of the total market in September, with General Motors and the imports losing ground. But the year-to-date breakout showed only Chrysler increasing its share, the imports remaining at 28.88 percent, and the remaining domestics down.

AMC was up 0.33 percentage points for the month, to 2.12 from 1.79 percent last year. Chrysler climbed to 8.90 percent from 7.73 percent, and Ford pinched off 15.58 percent of the whole pie compared with 13.94 percent a year ago.

GM slipped 0.34 percentage points, to 45.88 percent from 46.22 percent in 1980. Import registrations accounted for 27.45 percent, down 2.81 per-

Illinois high court overturns Chicago tax

CHICAGO.—The Illinois Supreme Court has ruled that the one percent service tax levied by Chicago since August is unconstitutional. The tax was paid by consumers who purchased services, ranging from those of attorneys to those of auto dealers. It made cars sold in Chicago more expensive than those sold in the suburbs. The Chicago City Council included the tax in a package designed to aid the city's transportation system.

Diesel-powered Fords start next fall

DEARBORN. — The first in a series of Ford Motor Co. diesel-engine options will debut next fall. The International Harvester 6.9-liter V-8 will be offered in 1983 Ford F-350 pickups. This will be followed in the spring by a Toyo Kogyo 2.2-liter diesel in the Ranger pickup. A Toyo Kogyo 2.0-liter diesel will be optional in 1984-model Escort and Lynx sedans. The BMW 2.4-liter diesel will be offered in 1985-model full-size and luxury cars.

Trade commission ruling prompts move to U. S.

PLATTSVILLE, Ont.—P. J. Wallbank Mfg. Co., Ltd., will move automotive spring equipment from its plant here to Michigan as a result of a U. S. International Trade Commission decision to bar import of the firm's spring assemblies. The ITC ruled that Wallbank was violating patent rights held by a U. S. spring manufacturer. Port Huron, Mich., is a likely site, the company said.

Mexico to limit car production

MEXICO CITY.—The Mexican government is restricting production by the country's booming car industry in an attempt to reduce its trade deficit. Makers in Mexico, including Ford Motor Co., Chrysler Corp. and Volkswagen, will have to limit 1982 model-year car production to 1981 levels under new government rulings. Output for 1981 totaled about 350,000 cars. Trucks are not covered by the limit.

Toyota exports down fractionally

TOKYO.—Toyota exported 141,028 vehicles in October, down 0.1 percent from the year-earlier month. The breakdown was 84,423 passenger cars (down 5.9 percent) and 56,605 trucks and buses (up 10.2 percent). Toyota said exports overall held at about year-earlier levels, thanks to increased shipments to African nations and to a recovery in exports to the Middle East.

Blue Coral to sponsor World's Fair pavilion

WASHINGTON.—Blue Coral, Inc., maker of Blue Poly car care products, has been named an official sponsor of the United States Pavilion at the 1982 World's Fair in Knoxville, Tenn.

GE auto center picks Ross Roy

DETROIT. — General Electric's Automotive Materials Center, Southfield, Mich., has appointed Ross Roy, Inc., as its advertising agency. The Automotive Materials Center is operated by GE's Engineered Materials Group.

Suzuki to build minicar factory

TOKYO. — Suzuki plans to build a factory to produce minicars of the 500 and 1,000-cc class, according to the Japan Economic Journal. The plant, scheduled to begin output late in 1983, will have a capacity of 12,000 cars a month at the start, rising to 20,000. Suzuki said the new plant is not intended to increase the firm's capacity, but will merely transfer existing production to the new factory.

Chrysler promotes Morrissey

HIGHLAND PARK, Mich.—Donald P. Morrissey, assistant comptroller—sales and marketing, Chrysler Corp., has been named general manager — Import Operations. He will direct import sales development, import distribution and port operations, import marketing and merchandising and import technical services and liaison. Morrissey has been with Chrysler since 1957.

Dealer appeals to high court in fight to block L-M outlet

LITCHFIELD, Conn. — McLaughlin Ford-Mercury is continuing its attempt to block the establishment of a Ford-Mercury dealership in a nearby community and has filed an appeal with the Connecticut Supreme Court.

McLaughlin's attorneys filed the appeal with the Supreme Court after the Ford Dealer Policy Board rejected McLaughlin's arguments against the appointment of Greentree Toyota as an L-M dealership in nearby Brookfield.

The hearing before the Dealer Policy Board was held under an order by a lower court.

The lower court found that McLaughlin was entitled to a hearing before the Dealer Policy Board, but the court dismissed a second claim brought by McLaughlin against Ford Motor Co. under the state's unfair trade practices laws.

The court found that since the complaint did not affect the consumer, those statutes were not applicable.

In the appeal, McLaughlin claims that the court erred in that decision. Phillip Spillane, McLaughlin's attorney, said this is the major issue of the appeal, although other points are raised.

The basic thrust of McLaughlin's suit against Ford is the allegation that Ford violated the dealer franchise agreement by appointing a new dealer 7.5 miles from the McLaughlin dealership rather than the minimum of 10 miles required under the agreement.

No date has been set for the hearing before the Supreme Court.

lthough Americans drive more

Gasoline consumption falls again

WASHINGTON. — The Highay Users Federation estimates at motor-vehicle travel in the . S. this year may almost equal 978's record 1,548.2 billion iles. But 1981's gasoline conmption, from January through eptember, was down 11 perent from the same period in 978.

This is the third consecutive ear that gasoline consumption as fallen, HUF said.

Reports from the Federal ighway Administration indiate that from January through ugust of this year, Americans rove 26 billion miles more than he comparable 1980 period and nly two billion miles less than he same period in 1978.

According to data compiled y the American Petroleum Initute, the nation used an average 7.4 million barrels of gasoline per day through September in 1978.

Thanks to more-fuel-efficient vehicles and heightened conservation efforts, 1981's daily average for the same period was 6.6 million barrels.

"During 1979 and 1980, largely due to periods of uncertain fuel availability and higher gasoline prices, highway travel dropped about one percent annually," said Woodrow W. Rankin, director of HUF's transportation and safety division.

"But so far in 1981, motor-vehicle travel is up about 2.5 percent over last year. At the same time, gasoline consumption is down 4 percent."

The Travel Industry Assn. of America estimates that 10 million more adults are taking vacations by automobile this year than last. Why the return to highways?

"Gasoline supplies and prices stabilized over the spring and summer," Rankin explained, "and people could budget their trips without worrying about gas lines."

He said the increase in travel this year "is really a return to normal growth patterns predicted for the 1980s based on the annual increase in population and number of new drivers."

GMAC profit climbs 49 pct. for 3rd quarter

DETROIT. — General Motors cceptance Corp. said its third uarter consolidated net income ose 49.7 percent to $108.5 milion from $72.5 million last year. hat brought the nine-month et income total to $245.6 million, up 35.9 percent from $180.7 illion in the year-ago period.

GMAC said it doubled the reail and lease financing receivbles acquired in the period to record $8.8 billion from $4.4 illion last year.

GMAC President Robert F. Murphy said the volume was largely attributable to "the overwhelming success" of the 13.8 financing plan offered in August and September.

Income from financing operations was up 46 percent in the quarter to $87.6 million from $60 million in 1980. For the January-September period, financing income rose 35 percent to $196.6 million from $145.6 million.

Income from insurance operations was $20.9 million in the third quarter, up 67.2 percent from $12.5 million last year, making the tally for the first three quarters $49 million, up 39.6 percent from $35.1 million in 1980.

The finance unit of General Motors said retail and lease financing receivables outstanding at Sept. 30 totaled $32.3 billion, up from $25.3 billion one year earlier.

Wholesale receivables outstanding totaled $8.9 billion at Sept. 30, up from $7.7 billion at Sept. 30, 1980.

Double take

C. E. Dickerson, left, and R. F. Dickerson, right, receive their quarter-century dealer awards from Chevrolet's St. Louis zone manager, J. L. Branch. The Dickerson dealership is in Ullin, Ill.

Motors Insurance names three to new posts

DETROIT. — Andrew W. Waymack, formerly branch manager of Motors Insurance Corp. in San Antonio, Tex., has been named manager of the Midwest control office in Oak Brook, Ill.

Succeeding him in San Antonio is Robert D. Norman, who was branch manager in Corpus Christi, Tex. The new manager in Corpus Christi is William M. Phillips, who was regional agency relations manager in Atlanta.

As Senate committee drafts amendments

Little hope seen for Clean Air relief

Continued from Page 1

have damaging effects on manufacturers and operators of trucks of all sizes.

"The Hart heavy-duty truck amendment in effect will require catalytic converters and unleaded fuel for all heavy-duty gasoline trucks at an additional first cost estimated to be $900 and an additional operating cost of about $2,800, according to our calculations," the GM spokesman said.

"The Hart light-duty truck amendment," he continued, "will, in effect, eliminate use of diesel engines on all light trucks beginning in 1985 and require the use of electronic engine controls and three-way catalysts coupled to complex computer technology.

"The 1985 deadline does not allow development time for application of this kind of technology to the large variety of trucks needed by the marketplace.

"The committee action must be reversed or severe economic effects will result," the GM spokesman said.

• Hart countered, however, that heavy and light-duty truck emissions have been an increasing problem at high altitudes.

He cited findings by the National Commission on Air Quality indicating that easing heavy-duty truck standards would prevent at least six major metropolitan areas from meeting ambient air quality standards for CO by 1990 and keep Denver from ever meeting them.

The only good thing for the auto makers to come out of last week's drafting session was the acceptance of an amendment offered by Senator Lloyd Bentsen, Texas Democrat, that would require EPA to give heavy-duty truck makers at least four years leadtime when imposing any emissions requirements and would keep any such standard in effect for at least four years. The current requirement for retaining a standard is three years.

Bentsen's amendment also changes EPA's definition of "useful life" for heavy-duty trucks from "average length to first engine rebuild" to one-half the average life of a heavy-duty engine or the length of a usual commercial warranty.

These amendments should bring a little reality to heavy-duty emissions regulations and allow makers to amortize their costs more fully, Bentsen said.

• The Senate Environment and Public Works Committee will continue drafting of Clean Air legislation later this week at which time it is expected to take up the question of what to do with passenger-car emission standards.

Senator Steven Symms, Idaho Republican, is expected to offer an amendment to change the CO standard to 7 gpm as is favored by the auto makers and the EPA.

Committee sources indicate, however, that this proposal is not likely to pass. No amendment will be offered to ease the NOx standard to 2 gpm as favored by the auto makers and the EPA, as there is no hope of getting this past the committee.

The other major desire of the auto makers, relief from the pending 1984 requirement that all cars be capable of meeting emission requirements regardless of altitude, stands a slightly better change.

Hart, who has opposed any such move, has indicated he will try to work out something out with others on the committee.

U.S. says it won't challenge Chrysler-Mitsubishi deal

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The Justice Department says it will not challenge the renegotiated agreement between Chrysler Corp. and Mitsubishi Motors Corp. at this time, although, as usual, it reserves the right to do so in the future if the agreement is shown to have anticompetitive effects.

At presstime, the Chrysler Loan Guarantee Board had not acted, although it is expected to have no objections. Both approvals are needed before the agreement can take effect.

The 100-page, single spaced agreement itself — dated Sept. 24, 1981—is not now available although more information is expected by the end of a prescribed waiting period. If Chrysler decides it wants confidentiality for certain areas of the agreement, it must show cause.

The main provision would allow Mitsubishi Motors to initiate its own dealer network to sell cars and light trucks as early as 1982 and to continue to sell other models through Chrysler dealerships. Until 1984, Chrysler would retain the exclusive right to distribute certain models in the U. S.

The negotiated agreement is for 10 years, but the 1984 date is used because Mitsubishi at this point does not know what its exact product line will be.

It is probably safe to assume that the models Chrysler will be selling include Champs and Colts and Sapporos and Challengers and Colt and Arrow light trucks. New models may be expected, and Chrysler will have to decide whether shielding their identity for a period is to its advantage.

• The new agreement also contains certain provisions having to do with supply allocations and prices for the vehicles. They exist because Mitsubishi Motors is a dual distributor and Chrysler must be sure that Mitsubishi does not favor its captive distributor, either in supply or price, over Chrysler. Chrysler must make sure it is not discriminated against.

The provision on selling arrangements remains the same—that is, Mitsubishi sells to Chrysler on a consignment-like basis at various ports and sometimes Mitsubishi adds options. Delays in taking possession may eat up a month, but since Chrysler does not have title during this period, it is the equivalent of free financing.

While this dual distribution of Mitsubishi products would continue through 1984 — with Chrysler dealers having some models exclusively and Mitsubishi dealers having others — after that the parties could negotiate whether specific models would be sold exclusively through one channel or whether distribution for all models of Mitsubishis would be shared.

The 10-year agreement is scheduled to expire in 1990, but it can be extended by four-year terms if both parties agree.

EPA faces budget cut of nearly half

Continued from Page 1

vert her image from a hard-hearted thug sent to destroy EPA into a heroine fighting to save the agency from the fiscal wrath of OMB Director David Stockman.

By this theory, making Stockman the environmental bad guy is considered OK since he is already tainted for his candid comments on Reaganomics.

In return, Gorsuch looks good and the budget cuts she has proposed, budget cuts for which she had been roundly criticized by environmentalists and Democrats alike, look likewise.

Knowledgeable sources doubt the veracity of this scenario, however, and cite a heated exchange between Gorsuch and Stockman as proof. They would have to have been very good actors to pull that off, one said.

Oklahoma dealers elect first woman to board

OKLAHOMA CITY. — Doris Rudder, VW-Porsche-Audi dealer in Lawton, Okla., has become the first woman to be elected a director of the Oklahoma Automobile Dealers Assn.

She and her husband, now deceased, had operated Chrysler-Plymouth and Ford-Lincoln-Mercury points in Elk City, Okla., before opening the Lawton store in 1966.

New-car registrations rise; domestics gain, imports dip

Continued from Page 8

centage points from 30.26 percent. Miscellaneous domestics accounted for 0.07 percent compared with 0.06 percent a year earlier.

Excluding imports, September domestic registrations were divided as follows: GM, 63.24 percent, down from 66.27 percent in 1980; Ford, 21.48 percent, up from 19.99 percent; Chrysler, 12.27 percent, up from 11.09 percent; AMC, 2.92 percent, up from 2.56 percent, and miscellaneous cars, 0.09 percent, unchanged from September, 1980.

By size segments, U. S. intermediates and imports lost ground to the competition in September. Subcompacts climbed to 16.38 percent from 14.95 percent last year. Compacts pushed to 21.78 percent from 19.18 percent. Luxury models earned 4.75 percent of the total, up from 4.17 percent, and standards remained in balance, 9.83 percent compared with 9.82 percent a year earlier.

Imports slipped back to 27.46 percent from 30.26 percent and intermediates dipped to 19.80 percent from 21.62 percent.

The race for top nameplate featured Chevrolet Chevette holding onto first place, which it had recaptured in August. The best 20 in September were as follows:

1—Chevrolet Chevette	33,210
2—Buick Century/Regal	31,473
3—Olds Cutlass Supreme	25,102
4—Chevrolet Citation	24,030
5—Plymouth Reliant	22,139
6—Olds 88/98	20,743
7—Fairmont	20,651
8—Escort	19,400
9—Standard Chevrolet	18,439
10—Buick Skylark	17,844

Notre Dame honors Lund

Chevrolet General Manager Robert D. Lund, left, is honored by the Rev. Father Edmund Joyce, executive vice president of the University of Notre Dame, for Lund's contributions to intercollegiate football. Presentation of a plaque was made at a game in South Bend between the Fighting Irish and the University of Southern California. Lund was instrumental in starting the Chevrolet College Scholarship program in 1971 which to date has contributed some $1.5 million to colleges and universities in recognition of their teams' performances in nationally televised football games.

Calif. judge sets aside order for easing of smog decree

Continued from Page 2

apparently at minimum, listing oral or written contracts.

This excludes the lawyers talking to each other, but perhaps might cover company meetings — if any — with Reagan Administration officials (White House counsel Boyden Gray? Vice President George Bush? Transportation Secretary Drew Lewis? FTC Chairman James C. Miller?—all of whom may have been involved before the announcement of plans to scrub the 10-year-old consent decree).

It is not even clear at present whether Judge Curtis' order is appealable, but even if it is, that itself involves delay.

This last move of Judge Curtis is just one more twist in the long and complex history of the alleged conspiracy of General Motors, Ford Motor Co., Chrysler Corp and American Motors and their trade association to delay installing pollution control devices in California in the 1950s.

The federal investigation started in 1967 with a grand jury looking into criminal charges, but it culminated in a civil complaint filed in the dying days of the Johnson Administration in 1969.

The October, 1969, consent settlement had two provisions due to expire in 10 years but renewable for another 10 years.

• During 1977 and 1978, the Center for Auto Safety and the California Air Resources Board sought renewal and so did the Justice Department. In March, 1979, Judge Curtis moved to renew the consent decree until 1989.

But then Chrysler and GM asked the Justice Department to allow exchange of data on emission control and passive belts and permission was granted.

In May, 1979, Ford — noting that AMC and Chrysler were being helped by GM and it was not — asked Curtis' court to reconsider and by July, Judge Curtis reversed himself and denied the extension of the consent decree.

The Ninth Circuit in May, 1981, reversed the lower court and on May 20, 1981, President Reagan wrote to the Justice Department about vacating the decree.

Even though Judge Curtis on Aug. 3 allowed two provisions to lapse and even though the Justice Department and the companies moved to vacate patent and licensing provisions, the whole issue again appears to be up in the air with permission given to the Center for Auto Safety to intervene.

Schaar and Bernardo promoted by Jensen

SCHILLER PARK, Ill.—Richard Schaar has been promoted to vice president of marketing and Tony Bernardo has been promoted to vice president of sales for the car audio division of Jensen Sound Laboratories.

Schaar was formerly assistant to the president of International Jensen's Electronic Group, and Bernardo was national field sales manager for the car audio division of Jensen.

Tire makers battle for European business

Opel tests Pirelli P8

An Opel Kadett tests Pirelli P8 fuel savers at the tire company's track at Vizzola, Italy.

By Richard Feast
European Editor

European auto makers are set to decide which tire makers will win the costly race to supply them with the new fuel-saving tires that are now reaching the end of development.

Goodyear, Michelin, Dunlop, Pirelli and Uniroyal have all produced low-rolling-resistance tires which improve a car's fuel economy. The prospect of simply bolting on a 5 percent saving in fuel is certainly attractive to auto makers.

The problem with low-roller tires, as they are known, is that each producer wants to make a different size tire for a specific car. This existence of more than one technology deepens the confusion, and no tire maker is yet prepared to admit that its rivals have better solutions.

The recent way in which Pirelli stole a lead over its rivals, when Porsche and others switched to ultra-low-profile tires for high-performance cars, has convinced tire makers they cannot afford to be left out of the race to develop fuel-saving tires.

The battle is for major O/E orders during the '80s. A few makers — Saab, Opel and Fiat — have already specified low-rollers on a few models, but the main orders have yet to be allocated.

The adoption is likely to please governments as well. According to one of the tire makers, a 6 percent saving on car fuel consumption will reduce Europe's annual imported oil bill by $2.75 billion, or 4.23 million tonnes.

First attempts at producing economy tires yielded up to 5 percent reductions in fuel consumption, which equates to cutting rolling resistance by a quarter.

To put the importance of rolling resistance into perspective, at 25-MPH more than 40 percent of a car's available power is needed to overcome the tires' resistance. At this speed, wind or aerodynamic drag is of marginal importance.

• Rolling resistance rises steadily as the car's speed increases up to 90-MPH. But the aerodynamic drag builds up more drastically to overshadow the energy losses incurred by the tires.

At 100 MPH, only 10 to 15 percent of the engine's available power is taken by the tires in rolling resistance. Wind drag, meanwhile, is five times greater.

More-efficient engines and lower-drag body shapes will only serve to increase the relative importance of low-roller tires.

Tire companies are quite capable of creating the low-energy-absorbing compounds of the low-rollers. The trick is not to trade their qualities off at the expense of wet skid resistance— as well as ride comfort and tire longevity.

The latest generation low-rollers fall mainly into two categories — those employing the traditional tire rubber polymers, and Dunlop.

The British company, working with Shell, claims to have developed a polymer which increases its energy absorption under braking, thereby producing good skid resistance.

Dunlop's technical head, Geoff Morton, claims, "We can double the fuel saving by putting this polymer onto a low-roller tire."

On the Dunlop tire, the new polymer provides half of the 25 percent reduction in rolling resistance, the remainder coming from a different type of construction for the tire using lower energy absorbing materials in the sidewalls.

In the barrage of claims surrounding the new low-rollers, Dunlop reckons its latest SP4 offers a 5 percent fuel saving compared with Pirelli's economy tire, the P8. And like Pirelli, Dunlop says there is no loss of wet skid performance, handling or tire life.

While Dunlop has the first call on the new polymer, Shell will obviously be keen to sell it to other tire makers as well.

Dunlop's rivals have all varied the physical properties of their tires, juggling with inflation pressure, tread widths, patterns, carcass shapes, height to width relationships (aspect ratio) and wheel diameter to overcome the loss of handling and wet skid performance that can be introduced by low-roller rubbers.

One theory is that European auto makers will adopt Goodyear's approach — of developing super-economy tires which have high aspect ratios, inflation pressures well above 40 pounds per square inch and are mounted on large diameter wheels.

These tires will be expensive, but the auto maker will recoup the premium by selling them as part of an economy package.

However, styling and marketing pressures dictate that some fuel economy from the tires must be sacrificed by going to wide, low-aspect-ratio tires. Just which remains a matter of debate.

At one end of the spectrum are Michelin and Pirelli, who believe the 65 series aspect ratio should be the econotire across the whole range—though they concede they will still make ordinary 80 series if they are wanted.

Uniroyal claims that 70 series "is all that is needed for the best compromise."

Goodyear is backing 80 series for economy cars and 65 series for models where handling matters. The company reckons that while 80 series on large wheels will show reductions in rolling resistance of at least 25 percent, the squatter 65 series will not exceed 20 percent reduction.

Pirelli's second-generation P8 economy tire — just introduced — shows a 10 percent improvement in rolling resistance compared with the original P8.

The Italian engineers are adamant that the 65 series is right for combining a wide, stiff tread which reduces losses due to shuffling of the tread, and flexible, bulging sidewalls for comfort.

• It is on the subject of comfort that the French tire giant, Michelin, enters the scene.

Michelin opted for a smaller wheel rim flange — the TRX flange — in order to increase the effective height of the tire sidewall. This was done to improve the ride comfort of low, squat tires.

Michelin claims that the TRX side wall is less stiff than that of conventional tires, and thus absorbs less energy—which means fuel saving. Other tire makers claim that any improvement in performance of the French tires is not due to the TRX concept.

All Michelin's rivals have built TRX-type tires of their own, and are united in claiming the French tires are not built according to the company's patents.

The Michelin economy tire in Europe is a TRX 65 series which offers approximately 15 percent less rolling resistance than the company's equivalent 80 series XZX tire.

But the whole subject of TRX throws the rest of the tire industry into a frenzy. It is simply the "wrong" size.

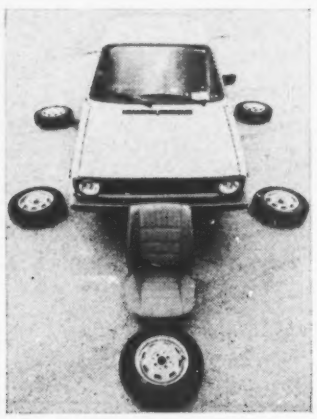
The auto industry traditionally uses wheels measured in whole inches. Michelin's millimetric wheel did not exist until the company decided its technology was best. Because TRX tires require a specially profiled rim and do not work on conventional flanges, Michelin adopted the metric wheel to avoid dangerous substitution for other tire makes.

This is where auto makers could have the final say. If they agree with Michelin, everyone else in the tire business would have to spend millions of dollars on new metric moulds just to remain in the game.

Michelin is adamant. "For Michelin there is only one way forward in car tires, and that is the TRX," says the company which sits on a third of the European tire business.

STOP!

Braking performance is an important aspect of a car maker's requirements for tires. Here, a Fiat Mirafiori running on Pirelli P8 tires executes braking maneuvers on a wet track.



Low rollers

Pirelli reports that its latest P8 low rolling resistance tires save up to 6 percent in fuel consumption compared with standard steel-belted radials. That, it says, is the equivalent of a 176 pounds weight saving, or the front passenger seat and five wheels and tires on this Rabbit.

Growth looms for diesel cars

By Richard Feast
European Correspondent

Demand for diesel-engined cars could be much greater than many observers believe if a forecast by International Business Reports is correct.

In a major analysis of the market for the next five years, IBR believes diesel registrations in western Europe will rise by 150 percent to more than 1.5 million.

At the same time, it forecasts a staggering seven-fold increase in diesel-car registrations in the U. S. to 2.8 million by the middle of the decade.

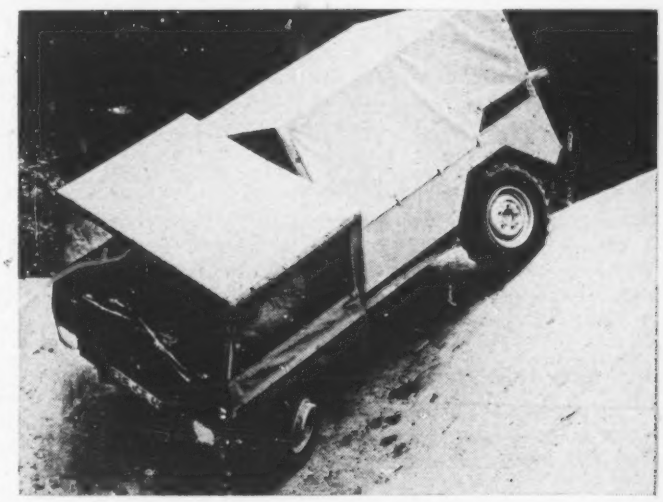
The report, Diesel potential to 1985, deals with the United States and the eight major European markets.

Diesel car demand surged in the wake of the second oil price shock, says the report.

This year, decontrol of oil prices in the U. S. and depreciation of European currencies against the dollar have brought about further increases in the real price of fuel, adding impetus to the trend on both sides of the Atlantic.

It adds that manufacturers'

Continued on Page 13



Let's twist again . . .

Unusual feature of the new all-terrain vehicle to be built by ATW Auto-Montan-Werke in the Irish Republic (Automotive News, Oct. 12) is the central twisting connection. It provides good ground contact over rough surfaces, according to designers Messerschmitt-Bolkow-Blohm. Output of some 1,200 Chicos, as the vehicle is called, is forecast, mainly for sale in Third World countries.

world news briefs

Audi builds extra flexibility

The shell of the No. 3 production building at Audi's Ingolstadt factory was completed at the beginning of October. The new facility will give production more flexibility to respond to market demands, says Audi, which has been hit by a market swing away from its 100 and 200 models.

Hyundai expands in Europe

Hyundai, of South Korea, has added the UK and Italy to its export markets in Europe. Its Pony was already on sale in Belgium and Holland.

Prestige makers forge ahead

Both Daimler-Benz and BMW expect car production this year to exceed last year's. Exports compensate for weaker domestic demand.

Roy Axe goes home

Roy Axe, head of automotive design for Chrysler Corp. and formerly with the old Rootes group in the UK, is to join BL as director of styling for light and medium cars. He replaces David Bache, who is setting up business on his own.

Matra looks to LPG

Matra, the French defense contractor and motor group, will market liquefied petroleum gas (LPG) conversions through its Solex carburetor company. It predicts a market of 800,000 vehicles in the UK, France, West Germany and Belgium by the mid-'80s.

Saturday shifts at Saarlouis

Ford's Saarlouis factory in West Germany has been working Saturday morning shifts to meet demand for the front-drive Escort. Each shift adds 600 a day compared with a normal daily output of 1,200. Meanwhile, the Hailwood Escort plant in England is missing its daily target by around 250 units.

South African expansion for Mercedes-Benz

Investments of $220 million are being made by UCDD (controlled by Daimler-Benz) to lift South African production from 800 to 1,200 vehicles a month. Commercial vehicle output will be raised by a third to 1,000 monthly.

Project XX for export

European sources stress that the BL/Honda proposal to produce a 1985 executive car—known as Project XX—will not affect Honda's production plans in the U. S. The car will be made in the UK and Japan, with exports from each to North America.

DeLorean numbers edge up

The latest official statistics (to the end of July, from the SMMT) show DeLorean production at 1,760.

Bleak outlook for Alfa Romeo

Fears are growing in Italy that the overdue downturn in domestic demand will result in substantial layoffs at Alfa Romeo—and possibly bitter industrial strife. Despite the unprecedented demand this year and last in Italy, Alfa Romeo has lost market share.

VW spends in South America

Volkswagen is having to inject capital into its ailing South American operations. Brazil is to receive $80 million, Argentina $45 million and the former Chrysler do Brasil truck operations $70 million.

Decline foreseen for Michelin

Michelin's dominance of the European tire market — 37 percent—is predicted to decline over the next five years. A survey by Charles Zub Associates, of London, envisages gains for Goodyear, Pirelli, Bridgestone and particularly Continental. CZA predicts the demise of Kleber, of France, and Ceat, of Italy.

Fiat expands robot operation

Fiat, one of Europe's pioneers in the use of robotics in auto factories, has taken additional steps aimed at expanding capacity and the range of work tackled by industrial robots.

Its latest equipment will be able to build engines almost without the human element and it is experimenting with seeing-eye TV robots which will be capable of much more complicated assembly tasks.

Fiat executives are apt to refer to the latest developments as "son of Robogate"—after the system which it introduced in the mid-70s for computer-controlled assembly of Strada body shells.

The engine assembly development is officially known as L.A.M., which stands for the Italian words for asynchronous engine assembly. It has cost Fiat more than $15 million to install at its Mirafiori factory near Turin.

The benefits, when it is in full production next year, will be an output of 1,500 engines a day with just 350 workers in two shifts.

• The engines may seem all of one type, but worldwide detail and exhaust emission standards differ to such a degree that as many as 110 different versions of Fiat's basic single-overhead camshaft engine are required. (The engine powers the Lancia Delta and Fiat X 1/9 as well as the Strada.)

The system was devised by Fiat's own Comau division and works on the basis that engines are assembled by stages at work stations to which they are delivered and from which they are collected by remote control trolleys.

There are 37 of these battery-powered trolleys, smaller versions of those used in Robogate. They follow magnetic tracks totaling five miles in length.

The trolleys serve 10 islands consisting of 12 work stations each. Eleven are used for production, the other for rectification work.

All automated equipment receives orders from three large central computers which coordinate the whole operation.

Fiat says: "The conventional production line becomes less and less desirable as a means of building engines. Quite apart from the total stoppage caused by any kind of holdup in one section, the speed of operation tends to be governed by the time needed to assemble the most complicated and expensive version of the engine.

"This is the drawback avoided by Fiat's new L.A.M. system."

• Meanwhile, Fiat's Research Center concentrated on increasing the flexibility of the robot itself.

The task selected for development was the bolting of hinges to doors — a seemingly simple task achieved by the human operator by eye and feel. Fiat's second-generation seeing robot instead looks for the holes, fixes their centers exactly and moves its operating head so that the bolts are percisely in line before screwing them home.

The means of doing this is with a TV camera, a computer and a pre-processor which transfers the image into black or white — information on which the computer can act with accuracy.

It is fast, too. It can install the hinges in 18 seconds, well under half the time it takes a person.

Several such tasks are being studied by Fiat, which says the process opens the way to all manner of application in almost every aspect of auto production.

"This second generation of robot prototype will change the shape of production lines in the years to come," predicts Fiat.

• The company's use of robots dates back nearly 10 years. They were used to weld Fiat 132 wings into place.

The second stage was in 1974 with the introduction of the 131. Complete mechanical assemblies were built on remotely controlled trolleys which traveled the factory under computer guidance.

Robots really arrived with the Robogate system used to manufacture Strada body shells at Rivalta. It marked the point at which a central computer took control of several robots grouped around a "gate" and made them work as a team.

"If may be seen in history as the beginning of the end for the production line, since the gates, where so much of the work could be done in one place, were linked not by a moving line — which would have been impractical anyway since the bodies spent so much time in each gate — but by the same kind of remote-controlled trolley first seen in the 131 production facility," Fiat says.

The company says that 1,012 bodies a day on average are being made under the existing equipment. The latest expansion to the system will give Fiat a planned capacity of 1,300 bodies daily in two-shift operation.

Lotus takes off the top

The latest versions of the Lotus Eclat 2.2 are available with a removable roof section for open-air motoring. The model is known as Riviera. The roof section stows in a protective cover in the luggage compartment.

Future Renault trucks will be streamliners

By Jan P. Norbye
Staff Correspondent

Renault has successfully completed the merger of Berliet and Saviem, and rationalized production to a large extent. The model range has been simplified and quality upgraded.

The next step will be to apply higher technology to improve operating economy of heavy trucks.

Automotive News interviewed the man in charge of the strategic planning for Renault Industrial Vehicles, Elios Pascual. Asked about weight reductions, he coolly proclaimed: "We'll reduce the weight of our trucks by about 15 percent in the next 10 years. That's equivalent to taking one ton out of a truck that has an unladen weight of 7 to 7½ tons."

How can that be done? There are several ways, none of them cheap. Most come under the heading of "material substitution." That translates into replacing iron and steel by light alloys, plastics and composites. "How much we can do at any specific time becomes mainly a question of economics," reflects Pascual.

Weight reduction, presently has first priority in Renault's truck engineering. "On average, rolling resistance accounts for 80 percent of fuel consumption," Pascual says, "and rolling resistance is proportional to weight."

"Naturally, we are working to optimize powertrains and provide truck drivers with better information for driving economically," says Pascual. But he does not believe in automatic transmissions.

"We are developing a new type of all-mechanical gearbox," he says, "that will make the driver's tasks much easier. It's based on the existing five-speed unit, combined with an electronic gear-change system that works automatically according to a program but can be overridden by the driver."

As for aerodynamics, he says, "We have to harmonize the semi-trailer with the cab, and vice versa. That is the only solution. We expect to get down to a drag coefficient of 0.45 in 1986. That will mean 20 percent more miles per gallon."

What will the future cab look like for a simple two-axle truck? "The temptation is to stretch out the front end, like the nose of an airplane, but we must stay strictly within practical dimensions, and observe limits imposed by law in our different markets," explains Pascual, adding: "Extra length usually also means more weight, so we have to find a compromise that gives the greatest drag reductions at the lowest penalty in size and weight.

"We are working on an advanced truck prototype, with Ministry support," he says, "It's called Virage, and we'll be ready to let you see it about a year from now. It combines all the major elements of our present thinking on these problems."

Diesels

Continued from Page 11

product plans virtually guarantee the medium-term future of the diesel car.

The main impetus in the U. S. will come from General Motors, with new V-6 and V-5 diesels and possibly three-cylinder units later on. Despite GM's dependence on Isuzu for diesels for its Chevette, IBR believes the company will be self-sufficient by the end of 1983. The 5.7-liter V-8 diesel is expected to be discontinued by 1985.

On the other hand, Ford Motor Co. will source diesels from Toyo Kogyo and BMW-Steyr. American Motors will take Renault units and Chrysler will use Mitsubishi and/or Peugeot units.

Recent experience in the U. S. and Europe, the report states, suggests that supply by domestic manufacturers is an important factor in boosting demand. Now that GM is promoting the advantages of the diesel in the U. S., foreign suppliers like Daimler-Benz and Volvo have been surprised by the unprecedented level of demand for the diesel option.

Another boost in U. S. demand came with the relaxation of emission standards, which previously threatened to throttle any real growth in the more fuel-efficient diesels.

Among developments in Europe, IBR reports: "VW is at an advanced stage of testing a turbocharged, three-cylinder diesel version of the Polo, reputed to achieve in the region of 100 MPG. This configuration could well hold marketing implications equivalent in significance to the dieselization of the Golf."

• Neither does the forecast rule out a diesel version of the Opel S-car GM is to build in Spain. It points to the introduction in Europe of a compression - ignition version of the Fiat 127—all cars in the so-called super-mini class. But it rules out a diesel version for the large-volume Renault 5, supported by a healthy 15 percent of the French new-car market.

According to the survey, Volkswagen plans to achieve a production capacity of 2,000 of its 1.6-liter diesels each day. And it says that, like BMW-Steyr, VW is setting itself up as a major supplier of diesel car engines. One of the likely customers, says IBR, is Britain's BL, a company exposed by its lack of a suitably modern diesel engine at a time when demand will be burgeoning.

By 1985, the biggest national diesel market in Europe will be France, which will pass West Germany's numbers. One - fifth of French new cars will be diesels, compared with one in seven in Germany.

In Belgium and Holland the proportion will be one quarter by the middle of the decade. The lowest penetration the forecasters envisage in Europe will be in the UK — a mere 7 percent on registrations of 121,-000. Much of this growth will come from introduction of diesel versions of the replacement for the country's top seller, the Cortina, in a year's time.

BMW bolsters exports, production

BMW, the Munich quality car maker, was bolstered by its exports last year — and this year looks like much the same.

Flagging domestic demand in 1980 (down 13.2 percent at 140,-722) was compensated for by a 14.8-percent improvement in overseas sales (198,460).

"Knock on wood, in 1981 as far as numbers are concerned, we will make a small increase in production," reports Dr. Karlheinz Radermacher, a member of BMW's board of management. "And there are not many manufacturers who can say that."

Continued weak domestic demand means that BMW's export drive is continuing this year.

BMW has pursued a policy of creating factory-owned subsidiary companies in its main export destinations. Take-over of one in Japan on April 1 this year hiked the number to 11.

Dr. Horst Avenarius, head of public relations, reports increased exports in the opening quarter of this year compared with the same period last year.

"In the countries where BMW has its own sales organizations, the total markets have fallen 7 percent," he said. "But in that time sales of BMWs have increased 5 percent."

While BMW continues to build to capacity, it recently shelved a plan to open an additional car factory. But it is investing very heavily in new plant and models — "which is unavoidable if the current performance is to be extended into the future," it says.

In the past two years it has invested a record DM1.2 billion (approximately $515 million at today's rates).

A central part of its forward planning involves introduction of 300 Kuka multi-function robot welders. This will allow the Dingolfing plant—which makes all but the 3-series — to change functions in line with market demands. Ten are already installed, and will be followed over the next few years by the remainder.

Where diesel car demand will grow in the west

Country	New registrations (x 000)			Market share (percent)		
	1980	1982	1985	1980	1982	1985

At Toyota dealership

Aftermarket items are sold after

SCHAUMBURG, Ill. — Aftersale items including rustproofing, fabric protection, paint sealing and finance and insurance are profit-makers for Schaumberg Toyota, here, according to Gerald L. Resnick, president.

In fact, he urges his salesmen to leave the sale of these items until the car is sold. "They don't very often use it as a means of closing a sale," he explained, "but occasionally I'll have to remind them to leave the aftersale items for after the sale. 'Are you selling a car or rustproofing?' I ask them."

His salesmen are good, he said, and they like recommending The Protector rustproofing and such related products from the company as Paint Shield, Fabric Protector and Sound Shield, because they get full markup on them.

"We sell more rustproofing than any other aftermarket item," Resnick said. "Most of our customers want to keep their new cars from four to six years. So they know the rustproofing is important insurance.

"Even when they say they're only going to keep the car two years, we tell them they'll get as much as $50 of their $189.95 investment back when they resell the car," said Resnick. "And if they decide to keep the car longer, they have the protection," he and his salesmen point out.

Schaumburg Toyota is one of the largest Toyota dealerships in the Midwest. It sells 2,000 new cars annually and 400 plus used cars in a year.

• Last summer, it staged a promotion offering "hot dogs and red hot deals," "sweet corn and sweet deals" and "soft drinks and soft deals" along with a free Weber barbeque with the sale of a new car.

Some 49 new cars were sold on the weekend. The food was served under a tent on the hot August days when the promotion ran.

"We gave out more than a thousand hed hots," said Resnick of the "banquet of buys" advertised in some 60 TV commercials on all four of the Chicago stations from Wednesday to Saturday.

People who bought these new cars bought rustproofing with them.

"They know," said Resnick, "that it's like life insurance. No one wants to use it, but it's good to have. They know that in this climate it's important to have."

"Resnick and his son, Phillip, vice president, say that their salesmen like to recommend the aftersale items and they share in commissions, though they actually are sold by the finance and insurance man as part of the aftersale activity.

Salesmen have been given training by S & S Automotive, which sells the Protector line to Schaumburg Toyota. "But our men use their own good ideas to sell it," Resnick said.

Resnick expects to step up his sale of used cars as a result of the expansion of the dealership to almost twice its original size. In some cases, he'll add rustproofing to the used cars as a sales incentive.

He also finds that buyers are interested in preserving the fabric interiors which come with new-model Toyotas.

It used to be that the cars had only vinyl interiors, he said. Now, with the fabric interiors, there is an effort on the part of the consumer to keep it as fresh as possible, and Fabric Shield does that, so they often buy it, adding even more profit to the sale for Schaumburg Toyota.

Aftersale specialists

At Schaumburg Toyota, Schaumburg, Ill., Phillip Resnick, left, vice president, and Gerald L. Resnick, president, stand in the shadow of The Protector, the brand of rustproofing they offer customers at their high-volume (2,000 new cars a year) dealership. Other aftersale profitmakers include fabric protection, sound shielding and paint sealants.

AMC to market Eagle, Renegade in Japan in 1982

DETROIT. — American Motors, which hasn't marketed its vehicles in Japan for 10 years, plans to make a new start there with its Eagle wagon and the Jeep CJ-7 Renegade.

AMC hopes to get type certifications by April 1 and to begin selling the four-wheel-drive vehicles soon after that, through 65 retail outlets. A distribution network will also be established.

Trading company Mitsui & Co. will be import agent for the U. S.-assembled 4x4s.

An American Motors spokesman said the company expects sales volume of the two vehicles in Japan to be about 1,000 units in 1982, the first year of the new marketing setup.

Mitsubishi will continue to build the CJ-3B—a utility vehicle of older design—under license from Jeep, an AMC spokeswoman said.

Total is 32 percent below last year

76,051 cars built in holiday week

By Patricia Hoffman
Staff Writer

U. S. auto production dropped substantially last week from the previous week's output due to the Thanksgiving holiday and downtime at several assembly plants.

During three days of production last week, the auto makers targeted output at 76,051 units, down 32.48 percent from 112,628 completed the previous week, and down 17.92 percent below 92,653 units in the comparable 1980 holiday week.

So far this year, the auto makers have completed 5,920,581 units, up 1.96 percent from 5,806,933 in the comparable period last year.

General Motors' Bowling Green (Corvette) facility resumed operations last week after being idle since Nov. 9 for inventory control.

The second shift at GM's Willow Run plant returns today (Nov. 30) with production cut from the original 70 units an hour on two shifts to 50 units an hour on two shifts.

GM's Linden facility will reduce line speed from 56 units an hour on two shifts to 45 units an hour on two shifts, also beginning today.

Also at GM, the Lordstown plant halted production last Wednesday with operations slated to resume Jan. 4

GM Leeds will close Dec. 7 to convert to the J-car. Operations are scheduled to resume Jan. 11.

GM's Arlington plant has scheduled a line-rate reduction starting Jan. 4. Output will decrease from 58 units an hour on two shifts to 45 units an hour, also on two shifts.

GM South Gate will halt second-shift operations today (Nov. 30).

Chrysler Corp.'s Newark facility, idle since Nov. 9 for inventory control, resumed operations last week.

American Motors' Kenosha plant closed last week for inventory adjustment. The point is slated to resume Dec. 5.

Checker Motors' Kalamazoo facility, idle since Nov. 18 for changeover, is slated to return Jan. 11.

Volkswagen of America's Westmoreland point, idle since Nov. 16 for inventory control, is slated to return Dec. 7.

All car facilities were idle two days last week in observance of the Thanksgiving Day holiday.

All Ford and Chrysler production figures were estimated by Automotive News.

Truck output moves up, production falls in Canada

For the second week in a row, Canadian auto production dropped below the previous week's total due to downtime at Ford Motor Co. facilities.

Despite a would-be offset by the gradual increase of A-car production at General Motors' Oshawa No. Two facility, downtime at Ford's St. Thomas and Oakville points brought estimated car output down 5.23 percent last week, from 15,427 to 14,620 units. Production was down 21.23 percent from 18,561 in the comparable 1980 week.

Year-to-date output for the auto makers is 741,383 units, down 3.79 percent from 770,620 in the comparable period last year.

Truck production was targeted at 11,228 units last week, up 2.20 percent from 10,986 in the previous week, and up 6.90 percent from 10,503 in the comparable 1980 week.

So far this year, the truck manufacturers have assembled 468,499 units, up 1.33 percent from 462,331 in the comparable period last year.

Chrysler's Windsor car facility returns to two-shift operations today (Nov. 30). One shift was dropped Oct. 12, cutting production from 560 units per day to 400 units per day.

The return of the second shift will bring the line rate back to 560 units per day, and 1,500 workers will be recalled from temporary layoff.

GM's St. Therese car facility will be idle starting today for an extended Christmas downtime due to sluggish market conditions. The plant is slated to resume operations Jan. 11.

Ford's St. Thomas point completed its second week of downtime last week (Nov. 23) for inventory control. The facility is slated to return today.

Also, at Ford, the Oakville plant was idle last week for the first of a two-week shutdown for inventory adjustment. Oakville is slated to resume operations Dec. 7.

Ford's Ontario truck point begins a week of downtime today. The point is scheduled to return Dec. 7.

International Harvester's Vancouver and Chatham facilities will be idle for an extensive holiday closing starting Dec. 14. The plants are slated to resume production Jan. 4.

British licenses to mark possible organ donors

LONDON. — Beginning in October, 1982, British driving licenses will carry a detachable portion allowing the holder to donate his kidneys and other organs in the event of a fatal accident.

"I am sure this will be warmly welcomed by the public," said Kenneth Clarke, undersecretary of state for transport.

Two-day holiday reduces week's truck production

Because of the Thanksgiving holiday, last week's domestic truck production dropped 30.87 percent below the previous week's output. The total was about the same percentage below that of the comparable 1980 shortened work week. All U. S. truck facilities were idle last Thursday and Friday.

Last week's output was targeted at 18,091 units, down from 26,169 in the previous week, and down 30.81 percent below the 26,146 units completed in the comparable week last year.

Year-to-date output is 1,509,540 units, up 4.9 percent above 1,439,078 in the comparable 1980 period.

General Motors' Chevrolet Flint (Line Two) remained down last week (Nov. 23) due to a parts shortage.

The van line at GM's Lordstown facility will be idle beginning today (Nov. 30). The plant is slated to resume operation Dec. 7 minus the second shift.

Also at GM, the Janesville truck facility will drop the second shift beginning Jan. 4.

Volkswagen of America's Westmoreland facility remains down this week for inventory adjustment. The point, which has been idle since Nov. 16, is slated to resume Dec. 7.

American Motors' Toledo (Jeep) plant resumed operations last week after being down since Nov. 16 for inventory control.

International Harvester has slated downtime beginning Dec. 14 at its Ft. Wayne and Springfield facilities. The plants are scheduled to return Jan. 4.

Japanese balk at threats of new U.S. import curbs

By Jake Kelderman
Washington Staff Writer

The debate over Japanese car exports to the U. S. continued to pick up steam last week as government officials in Tokyo said they would not agree to a request by the U. S. to revise the current voluntary restraint agreement for 1982.

Transportation Secretary Drew Lewis, in Tokyo, has been warning Japanese auto makers that such a review may be necessary in light of the continued domestic auto sales slump in the U. S.

Takashi Ishihara, president of Nissan Motor Co. and chairman of the Japan Automobile Manufacturers' Assn., said his industry could not further restrict vehicle shipments below the 1981 level of 1.68 million units agreed to by the country's 11 auto makers.

Ishihara said Nissan would reject any further reduction of exports to the U. S., even if asked to do so by the Japanese government. He said maintaining the 1981 level of exports is a "matter of life or death" for the Japanese auto industry, which faces a depressed home market and declining profits.

Meanwhile in Washington, U. S. trade officials displayed a marked toughening of their stance toward the Japanese in their testimony before a Senate Subcommittee.

The hearings on U. S.-Japan trade and the state of the auto industry preceded talks that are to open this week between U. S. and Japanese trade officials.

Under the voluntary import restrictions worked out with the Japanese government last spring, Japanese car makers are to deliver no more than 1.68 million units to this country through next March. Through September they have delivered 905,223 units, down 1.7 percent from 1980 levels.

Imports will need to decline an additional 12.1 percent if the Japanese are to reach the agreed-upon level of restraint.

Trade officials said they fully expect that to happen but noted that because of the poor sales of U. S. cars, the Japanese would still end up taking 19.3 percent of the market, a full 2.5 percentage points more than what had been predicted last spring.

• The trade officials said they were also somewhat concerned that the agreement calls for Japan to determine import restraints for next year based on the Japanese sales projections. This would be a prime topic of debate when U. S. trade officials meet with their Japanese counterparts this week, they said.

U. S. Assistant Secretary of State for Economic and Business Affairs, Robert D. Hormats, said the issue of auto parts will be taken up at that time too.

Hormats said the Japanese are reneging on agreements to increase their imports of auto parts, apparently under the notion that because they have agreed to limit their auto exports little more need be done to satisfy U. S. demand for fairness in trade with the country.

Under an agreement reached last year, the Japanese were to send trade missions here with the understanding they would purchase up to $300 million in American auto parts.

To date, only $64 million has been bought and "even this total depends on the inclusion of chemical catalysts and cattle leather, of which a substantial portion are probably destined for nonautomotive uses," Hormats said.

Hormats said the trade mission has not resulted in a steady stream of new business and that parts exports to Japan this year will probably decrease in comparison to last year.

The Commerce Department has been able to identify only $5.5 million in actual new business, he said, noting that in contrast Japanese auto parts exports reached $3.8 billion in 1980, which is up nearly 30 percent from 1979. About $1.8 billion of that came to the U. S.,

Saudi Arabian market tilts from Japan to U.S.

By Dave Kaiser
Staff Correspondent

JEDDAH, Saudi Arabia.—Despite factors which give Japanese automobile manufacturers an edge in competition here over American manufacturers, Saudi Arabian consumers prefer an American car due to its style, elegance and status.

According to Saudi Business, the look of a car—in addition to quality—plays an important role in the Saudi Arabian market. It is for this reason that the upper strata of society prefer American cars which blend the two aspects satisfactorily.

Amr Khalid Hafiz, assistant general manager of the Saudi Research Co. in Riyadh has been using American cars for the last seven years after trying Japanese and Italian models. He now uses General Motors vehicles exclusively, saying he finds them comfortable, elegant, strong and safe. Another factor was the fact that spare parts are readily available.

According to figures announced here at the annual Mideast

breaking news

U. S.-built Renault to be named Alliance

DETROIT. — Renault Alliance is the name of the new front-drive subcompact sedan that will be assembled at American Motors' Kenosha plant, beginning next fall, to be sold through AMC/Renault dealers in the U. S. as an '83 model. The car was introduced earlier this fall in Europe as the R-9. In the U. S., it will be powered by a 1.4-liter four-cylinder engine, with choice of five-speed overdrive or three-speed automatic transmission. The single four-door body style will be joined in '84 by a coupe and a wagon, and diesel and turbo options also may be offered then.

Double U. S. gasoline tax, FHA chief urges

INDIANAPOLIS.—A doubling of the current four-cents-a-gallon federal tax on gasoline to help pay for maintaining the nation's highways was urged at a press conference here by Ray A. Barnhart, head of the Federal Highway Administration. The tax has remained unchanged since 1959, while the price of gasoline has more than quadrupled. An eight-cent tax would raise about $4 billion. Neither President Reagan nor Congress appears to be interested in a tax increase.

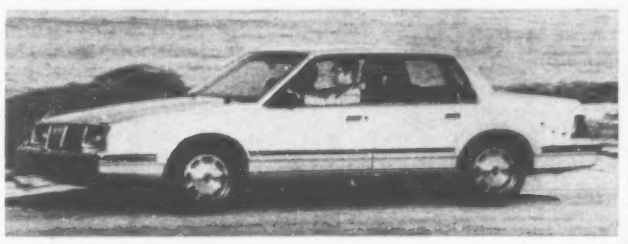
A-cars are a-comin'

Buick Century Limited sedan

The Century, Buick's version of the new General Motors A-body cars, is available as a Custom coupe and four-door sedan and Limited coupe and four-door. Although based on the X-car platform, the A-cars are significantly different in appearance, ride and handling. Story and another photo on Page 28.

New family member

Oldsmobile's family of Cutlass cars has been expanded with the addition of the Cutlass Ciera. The slippery front-drive car has a four-cylinder gasoline engine as standard but upgrading includes V-6 gasoline power or a new V-6 diesel engine. Story, other picture on Page 30.



A taste of Europe

The clean and uncluttered appearance of the Pontiac 6000 gives it a distinctly European flair. The black, flush frames for the windshield and side glass accentuate that flair. Aerodynamics is emphasized, from that air dam seen up front to a little lip on the trunk lid. Story, other picture on Page 18.

Chevy's newest entry

Design objectives for the 1982 Celebrity, Chevrolet's version of the General Motors A-car, included ride characteristics of the Malibu, quietness of the Caprice and handling of the Citation. Offered as a coupe, shown here, and as a sedan in three trim levels, Celebrity's standard equipment includes automatic transmission, power brakes, power steering and match-mounted glass-belted low-rolling-resistance tires. Story, other picture on Page 26.

Dealer chides those who fight proposed FTC used-car rule

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — New and used-car dealers fighting a proposed Federal Trade Commission used-car rule got a dressing down from one of their own last week.

Dave Eagleson, more than 25 years an Oldsmobile-Cadillac dealer in Olney, Ill., told a House subcommittee holding hearings on vetoing the rule that it was "a disgrace" to him "that the retail used-car industry and its dealer associations still oppose the rule."

This rule requires dealers to tell the customer no more than dealers already know about any car they might be selling, he said. It is not going to hurt business; if anything, it will help, he said.

Eagleson ought to know: His dealership has been inspecting its used vehicles for more than 20 years and disclosing the results of those inspections and remedial actions to customers for the same amount of time.

Even in this, the worst slump the auto industry has been in for a long time, he is still doing pretty well while those around him are hurting or out of business, he said.

Eagleson said he doesn't think much of the NADA arguments against the used-car rule and is more than a little unhappy with it for not disseminating any good things about it.

"Most dealers haven't even read it," he said, "and I venture to say that if they did, many of them wouldn't find it so objectionable."

• Eagleson said any sharp fifth grader can interpret the true meaning of NADA's objections to the used car rule:

"Compliance will cost too much." "Why spend money to find and record things we prefer the buyer didn't know about anyway?"

"The rule will increase our liability." "We're going to be in a lot of trouble if we give unreliable information and don't keep our promises."

"Government regulation is bad for us." "What is good for us is our enduring unregulated buyer-beware policy."

"The rule is ambiguous." "The 10 pages of plainly written English that explain how we can comply with the rule are more than we care to read and comprehend within the next six months."

"I just don't see any problems with this rule and think it could be a help not only to car buyers but to dealers as well," Eagleson said.

NADA and the National Independent Automobile Dealer Assn. have a different view. They argue the rule has the effect of mandating inspection of used cars and thereby opens the dealer to greater liability.

If this rule goes into effect, dealers will have more lawsuits, no "as is" sales and more sales going into the private market, they assert.

Rep. James Florio, New Jersey Democrat and chairman of the House Commerce, Transportation and Tourism Subcommittee, challenged those arguments.

The rule clearly states no inspection is required, he said. "As is" sales will still be allowed (he thought this a bit of a "red herring" since he couldn't see any difference between an "as is" sale by a dealer and an individual because buyer still has recourse under the law. The loss of sales to the private market argument is purely speculative, Florio said.

"The nation is experiencing an unprecedented boom in used-car sales and consumers deserve this minimal protection," he said.

• Rep. Gary A. Lee, New York Republican and sponsor of House legislation to veto the rule, thinks it goes too far and would rather it required only the disclosure of warranties and the right of inspection by an outside party.

Thus far he seems to be winning the argument. He now has 209 House members signed up as cosponsors of his veto resolution. (Earlier story appears on Page 33.)

Florio expects to mark up the legislation this week. There is a possibility the legislation will be voted yet this year, at least on the House side.

In the Senate, NADA and NIADA have managed to garner 43 cosponsors on a veto resolution.

Both houses of Congress must veto any rule to prevent it from becoming law. The rule goes into effect if either branch does not pass a veto resolution or fails to act within 90 days of its submittal to Congress.

On the used-car rule, the 90-

Service Index gains; rate of growth slows

By Francis J. Gawronski
Service Editor

Service and parts business in the nation's new-car dealerships continued in the upside in October, but the rate of growth dipped 1.5 percentage points, marking the fourth consecutive month that the pace has declined.

According to the Automotive News Service Index, shop volume in October was 102.9 percent of the business recorded in the same month of 1980.

In September, service and parts volume was 104.4 percent of the business in the like month the year before. In August it was 105.7 percent, in July, 109.8 percent, and in June it was 116.6 percent, the biggest increase in 30 months.

With three of the five indicators showing increases, October marked the eighth consecutive month in which shop volume has bettered the volume recorded in the year-earlier month.

The leading indicator in October was gross profit on all labor, parts and P&A sales — the most important indicator for the dealers' viewpoint, which was up 8.5 percent from the year ago figure. In September, gross profit was up 4.6 percent.

• Sales of all parts and P&A sales was up 4.8 percent in October, while shop parts sales (those used in customer-paid and warranty repairs) were up 1.2 percent.

The two indicators registering

SERVICE INDEX
102.9*

	Oct., '81 vs. Oct., 80	10 mos., '81 vs. 10 mos., '80
Gross Profit on All Labor and P&A Sales	+ 8.5%	+ 9.0%
Repair Orders Written	—10.3%	— 3.6%
Total Labor Sales (Customer & Warranty)	— 1.4%	+ 2.9%
Shop Parts Sales (Customer & Warranty)	+ 1.2%	+ 6.0%
Sales of All P&A	+ 7.3%	+ 8.3%

*—Survey by Automotive News shows that dealers' service and parts business in Oct., 1981, was 102.9 percent of business in Oct., 1980. Service business in the 10 months of 1981 was 105.0 percent of business in the corresponding period in 1980.

Prototype is driven to display area

Mexico developing sun-powered car

MEXICO CITY. — The Ministry of Human Settlements and Public Works (SAHOP), which has been quietly manufacturing a solar vehicle, will publicly unveil this at an auto show.

Javier Ibarra Herrera, director of the program for utilization of saline waters and solar energy, drove the pilot model car a distance of about 4 miles in 20 minutes to the display area, despite the chronically heavy city traffic.

Ibarra Herrera has been instrumental in launching the Mexican desalting program, with many plants now operated by solar energy. He personally drove the solar car to the Sports Palace, where it will be on display, with the hope it will spark public interest.

The Mexican official stressed that the car was constructed by Mexican technicians, and that it has great potential due to its low cost and easy operation. The vehicle cost is 90,000 pesos (about $3,150), a positive factor since standard gasoline-powered cars in Mexico today range anywhere from $7,800 for compact four-cylinder models, on up to $19,500 and more for six-cylinder cars.

While acknowledging that the experimental vehicle is a little too slow for normal city traffic, Ibarra Herrera said that further experiments in photovoltaic technology will overcome this problem.

The Ministry has guaranteed that it will provide adequate further funds for development of the car, which would reduce the smog in Mexico City, allegedly now at levels higher than any other city in the world.

Next year the SAHOP workshops expects to turn out a model that will perform satisfactorily in city traffic. The ultimate goal is to interest private industry to mass-produce the solar car, with this resulting in a considerable reduction in the original cost.

While Ibarra Herrera sees the solar auto as a city car, he indicated that Mexico will continue researches to develop an all-purpose vehicle which can be used both in urban centers and on rural highways.

New fashion ramp

Thought to be the first fashion show ever held on an automobile assembly line, Genesee Valley Shopping Center merchants sponsored a pre-Christmas event at Buick's Flint assembly operation.

Midget-car sales rise in Japan; export pushed

By John Hartley
Staff Correspondent

TOKYO. — Demand for midget trucks and cars in Japan continues to rise, with total sales this year now expected to reach 1.24 million units, compared with just over a million last year.

Generally, sales are still running at about 20 percent over a year ago, although the bulk of these tiny cars which have engines of no more than 550cc, are registered as commercial vehicles. Many are small vans and trucks, but a good proportion of them are also passenger cars which, owing to the rudimentary rear seat, can be registered as a commercial.

Last year, just under 200,000 midget passenger cars and some 850,000 commercial midgets were sold in Japan. This year, sales have been boosted by the introduction of a number of new models, of which the most significant was the Subaru Rex.

Previously an old-fashioned rear-engined design, this reemerged a couple of months ago as a smart little front-wheel-drive job, with more interior space than its rivals, thanks to a long wheelbase of 88.7 inches and an overall length of 126 inches.

An interesting option on this model is an automatic clutch, controlled el[illegible]his

Report finds little hope for auto recovery

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — These are not good times for the U. S. auto industry and, according to the U. S. Commerce Department, they are not likely to get better anytime soon.

In a report given to Congress last week, the department said the financial health of the industry has been sharply eroded in the last three years. With the prospect of continued weak sales and aggressive competition from the Japanese makers, there is serious doubt the U. S. auto industry can restore its long-term competitiveness.

A fundamental shift downward in long-run demand for cars and certain trucks has become evident, the report said.

"There is no prospect for a sharp turnaround in the immediate future."

The report was ordered by the Reagan Administration's Auto Task Force.

It noted the "most startling trend" in the industry has been the dramatic decline in working capital for General Motors, Ford Motor Co., Chrysler Corp. and American Motors.

From a level of $13 billion at yearend 1978, working capital fell to $300 million at the end of the third quarter of 1981 and could fall to zero or a negative $900 million by the end of the fourth quarter, the report said.

Working capital represents the money available for investment — and investment in new plants, models and technology is what the U. S. auto industry needs right now to become competitive, the report said.

• The lack of such funds has prompted postponements of modernizing investments, shutdowns of excess capacity, more foreign sourcing, wage restraints and large amounts of outside borrowing, the report said. It questioned whether the industry can preserve its liquidity in this fashion and at the same time restore its long-term competitiveness.

"A revived economy is the only change that can be realistically expected to remedy the industry's condition," the report said. "And even then, reduced demand growth will make it difficult for domestic producers to return to the sales and profit years of decades past."

For auto workers that means a permanent loss of approximately 200,000 jobs, the report said. In the supplier industries

Milestone Berlina Coupe

Phillips Motor Car Corp. announced production of Berlina Coupe No. 100 in November in Pompano Beach, Fla. The hand-made car is built on a new Corvette chassis, with only the windshield and T-top from the Corvette body retained. The frame is extended 22 inches to support a body designed after a 1938 Mercedes-Benz 540K. Production will be limited to 250.

Pink slips expected Dec. 15

13,000 GM workers to be idled by layoffs

By Joseph Bohn
Marketing Editor

DETROIT. — General Motors is moving swiftly in its plans to trim about 13,000 employes, or 7 percent, of its worldwide salaried force.

Dec. 15 was considered a "fairly reasonable" target date for pink slips, according to one insider.

"They're trying to get it done before Christmas . . . to give people some notice," the company source indicated.

"Last time, particular staffs were hit harder than others . . . where they felt there was a lot of deadwood," he said. He anticipated a similar pattern this time.

GM has been reviewing departments and divisions on an individual basis. Some, like Buick, where sales have been good, are expected to feel a blunter axe than Chevrolet, for example, whose sales have been off sharply.

Reports continue that Chevrolet is in for some top management changes, with a couple of key officials expected to take early retirements.

Overall, GM employes will be evaluated on the basis of performance, rather than seniority, in determining who will stay and who will go.

The upcoming cutbacks have been rumored for months, but finally got confirmation by GM officials, both on and off the record, last week.

A well-placed GM source said the company's financial forecast numbers had been "changed dramatically" recently for both December and the first quarter, indicating sharp revisions in projected cash flow and profits.

• GM cut auto production by 17 percent in December, and is expected to extend downtime in the first quarter, 1982.

It has been shutting down plants, dismissing blue-collar employes and putting new plant startups on the back burner in an effort to conserve cash.

The entire domestic car industry has been forecasting upturns that never materialized for about the past year-and-a-half. The feeling now is the market won't rebound for at least another six months.

Meanwhile, Supplemental Unemployment Benefits (SUB) funds for Detroit's three major car firms, covering blue collar workers, continue to deteriorate.

New layoffs and overpayments, in which furloughed employes collected both SUB and TRA benefits without paying anything back, are jeopardizing the funds.

SUB funds, designed to cushion the impact of layoffs, give an hourly worker in combination with state unemployment, about 95 percent of his normal pay.

Last week, about 193,000 employes were on indefinite furlough in the U. S., the highest level in 10 months.

UAW officials said some $500 million in overpayments had been made out of SUB funds to employes, much of it still unrecovered.

Both the UAW and auto company management are trying to get workers to repay this money.

As of last week, Chrysler had only $5 million in its SUB fund, equal to only 3.5 percent of full funding. Chrysler is paying out nearly $500,000 a week from the fund, and has about $27 million in uncollected overpayments.

On Nov. 1, Ford had about $54 million in its SUB fund, down nearly $6 million from a month earlier. Ford still has $184 million outstanding from workers who "double-dipped" SUB and TRA benefits.

GM's fund was reported at about $277 million in November, equal to 33 percent of full funding. Its net was down about $12 million from a month earlier. GM still had a little over $291 million in uncollected payments from double-dipping employes.

Company loses $318.9 million; year-ago profit was $20.2 million

IH reports dismal 4th quarter

By Edward Lapham
Financial Editor

International Harvester ended its 1981 fiscal year on a low point.

The company reported a net loss of $318.9 million ($10.04 a share) for the fourth fiscal quarter ended Oct. 31, compared with net earnings of $20.2 million (64 cents a share) in the same period last year. Sales in the August-October period declined nearly 20 percent to $1.78 billion from $2.21 billion in 1980.

The dismal fourth-quarter results brought the year's net loss to $393.1 million ($12.90 a share) compared with a net loss of $397.3 million ($12.91 a share) last year. Sales for the year rose 17.9 percent to $7.04 billion from $5.97 billion last year.

The company said the fiscal 1981 results from continuing operations "approximate very closely" projections and estimates made by the company to its lenders last September when the lenders were considering the $4.1 billion debt restructuring package.

The loss from continuing operations for the year was $635.7 million ($20.44 a share) compared with a loss of $374.8 million ($12.19 a share) last year.

Despite the company's projections, Wall Street auto analyst Arvid Jouppi, Arvid Jouppi Associates, said the fourth-quarter loss was "a bit deeper than one might have expected."

The analyst said the company's results were impacted by several extraordinary factors during the year, the $276 million gained from the July sale of the Solar Turbine Division and a writedown of $32 million on mining property.

"IH is still in a deep problem," Jouppi said. "The company needs to resolve the debt restructuring agreement, plus see a pickup in the heavy-truck market and a return to more normal conditions in the farm machinery market."

IH Chairman Archie R. McCardell, said the terms of the restructuring were in final form with copies due to be delivered to IH's banks last week.

The company blamed 1981 losses on "depressed markets worldwide, high interest expense and industrywide discounting" as well as "front-end costs of actions taken by IH to reduce future expenses, the costs of introducing a record number of new products and the effect of foreign currency rate changes which resulted in a charge of $30 million compared to a credit of $9 million in 1980."

IH said truck segment sales were up 23 percent to $3.3 billion in fiscal 1981, agricultural equipment sales were up 19 percent to $3.0 billion and construction machinery sales were off 2 percent to $743 million.

Company officials said they do not expect IH to regain profitability until at least the second quarter of the fiscal year—meaning the February-April period—due to "reduced backlog figures and continuing soft-market conditions."

Irate taxpayers block plan

M-B police car? No way!

HAMDEN, Conn. — What might have been a "first" for an area police department — acquisition of a Mercedes-Benz —has been scuttled amid massive phone-calling by irate taxpayers.

Announcement by Police Chief John P. Ambrogio that a $22,000 Mercedes-Benz would be added to the police fleet in this New Haven suburb sparked what was labeled one of the heaviest resident responses in recent town history.

An allocation of $9,000 by the town Legislative Council for purchase of a diesel car for experimental use by police is now to be used to buy an Oldsmobile diesel from Ekblade Oldsmobile, according to a town spokesman.

Seeking to replace a 1975 Ford, said to be "one of the oldest" in the police fleet, Chief Ambrogio was reportedly to get a Mercedes-Benz 240D diesel and 1982 Olds on lease for three years, with the agreement signed by Finance Director Murray Paull and a leasing firm, B. W. Capital Corp., New York.

The lease called for payment of $1,149-per-month for both cars, coming to $41,364 over the three-year span.

Hamden political figures including Mayor Richard G. Harris, were unprepared for taxpayer response, all negative.

One automobile dealer, not tied to Ekblade Olds—conceded that with inflationary costs confronting municipalities, a Mercedes-Benz police car might be "a tough nut to sell."

Cut labor costs by $100 million, IH asks UAW

CHICAGO. — International Harvester has asked its UAW-represented workers to reduce labor costs by $100 million dollars by next October.

IH has been losing money all this year and posted a $393.1 million loss for the fiscal year ended Oct. 31.

Company officials would not provide any details of the proposed concessions but said they cover both wages and benefits.

A UAW spokesman said the union is reviewing the proposal.

IH employs about 20,000 UAW-represented employes and another 10,000 are on indefinite layoffs.

The company has already taken away merit and COLA increases from non union workers and has eliminated dividends on its common stock.

GM materials staff to have new home

DETROIT. — General Motors will take its Materials Management Staff out of its current home in suburban Troy and begin bringing some employes into GM headquarters.

Beginning next spring, 100 of the 250 staff members will move to Detroit. The final disposition of the other 150 has not yet been made, but all of them may not be located at headquarters.

L-M deal opens

CATHEDRAL CITY, Calif. — Palm Springs Lincoln-Mercury held a grand opening in this Palm Springs suburb.

Rate holds steady despite more small cars

81 pct. of '81 cars had automatics

By Joseph Bohn
Marketing Editor

Automatic transmissions were almost as popular in '81 as before, despite the increasing number of small cars in the mix.

Similarly, four-speed manuals maintained about the same penetration, while five-speed manuals gained more popularity.

And General Motors finally rang down the curtain on three-speed manuals for '82, after selling some scattered units last year.

Industrywide, automatic transmissions went into 81.51 percent of domestic cars compared with an 82.36 penetration in '80. Some 5,508,994 cars were equipped with automatic drive, compared with 5,884,326 in '80.

The same number — 27 car lines — carried automatic transmissions as standard equipment as before.

GM installed automatic transmissions in 90.95 percent of its cars, equal to 3,823,498 units. That compared with an 87.16 percent penetration, or 3,996,446 units in '80.

Ford Motor installed the feature in 68.79 percent of its cars, equal to 1,034,587 units. That compared with 78.46 percent, or 1,077,769 units in '80.

Chrysler installed the item in 73.02 percent of its cars, equal to 535,609 units. That compared with 81.79 percent, or 625,864 units in '80.

American Motors installed automatic transmissions in 72.22 percent of its cars, equal to 99,037. That was down from 80.71 percent, or 159,693 units in '80.

Volkswagen put the automatic in 9.00 percent, or 16,263 Rabbits, compared with 11.00 percent, or 24,559 in '80.

• Four-speed manuals accounted for 17.01 percent of production, or 1,149,581 units, industrywide. That compared with 16.87 percent, or 1,205,115 units in '80.

At GM, only 8.42 percent, or 354,108 cars carried the four-speed. That was down from 12.55 percent, or 575,281 in '80.

Ford installed four-speeds in 29.99 percent, or 450,966 cars. That was up from 21.08 percent, or 284,572 units in '80.

AMC installed them in 38,088 cars, or 27.78 percent of production. That was up from 19.29 percent, or 38,174 in '80.

VW had an 60.40 percent installation rate, equal to 108,505 units. That was down 75.00 percent, or 167,451 in '80.

On the other hand, VW's five-speed manual instalaltions were up sharply, as they were for the industry.

VW installed five-speeds in 30.60 percent of its cars, equal to 54,867 units. That was up from 14.00 percent, or 37,503 in '80.

Industrywide, the rate of five-speed installations climbed to 1.19 percent or 80,524 from 0.52 percent, or 37,503 units the previous year.

Ford installed the option in 18,393 cars, equal to 1.22 percent of its output. That was up from 6,246, or 0.46 percent in '80.

GM installed the item in 0.17 percent of its cars, equal to 7,264 units. The company didn't offer a five-speed in '80.

Neither Chrysler nor AMC offered one in '81 or '80.

The three-speed manual gasped its last breath in '81. Only a handful of GM cars offered it, with the totals amounting to 23 Cutlasses, 36 LeMans, 263 Firebirds, 2,494 Malibus and 16,378 Camaros.

Budget cutback ends program for parts return

WASHINGTON. — One of the NHTSA programs being dropped for budget reasons is one 10-years old that involved about 26,000 independent garages, service stations and car dealerships who mailed to the government failed parts.

The cost is estimated at $90,000 to $100,000 a year.

The parts-return program eventually involved some 9,000 parts and it was helpful in several defect investigations and recall campaigns, notably flex-fans, which were hazardous for workers under the hood of several makes of cars, and in the Firestone 500 steel-belted radial tires.

The service operations would be sent lists of new recalls and ongoing investigations and asked to keep a special lookout for parts that failed and could create safety problems. They were supplied with bags for mailing parts.

NHTSA had an independent contractor handle the program.

**Some 23 Olds Cutlasses, 36 Pontiac LeMans, 263 Firebirds, 16,378 Camaros and 2,494 Malibus had a three speed manual, dropped by GM for '82.

Note: Figures are generally based on U. S. production. However, Canadian-only sourced cars, such as Cordoba/Mirada, are included in some instances; also, some '82-only models, such as EXP-LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,513 Chrysler models, 137,125 AMC and 179,635 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,673,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouth and 311,988 Dodge.

Fraser sets deadline

UAW eyes cuts in staff as slump continues

By Marjorie Sorge
Labor Editor

DETROIT. — The UAW may be forced to look at further cuts in staff if the auto industry doesn't improve soon, UAW President Douglas A. Fraser said.

He said the union "isn't going to panic in the next two months" but should the slump continue further cuts may be necessary. And, he is predicting at least another six months of slow sales.

Last year the union was forced to make reductions in staff as the membership dropped off by 250,000. Fraser said most of that was handled by attrition.

"I didn't think we'd ever have to (look at cuts) again," he said. "I really didn't. I thought we'd reached bottom. I just couldn't see it getting worse, but a 4.8 million sales year so far, that's half of what we used to sell!"

He said there will probably be about 1.3 million cars sold in the fourth quarter and predicted further cuts in shifts and line speeds in that quarter as inventories increase.

"I don't think it (auto industry) will recover before six months," he said, "and then not to '78/'79 levels. I don't think there's a chance. But I would argue it can't stay where it is because of sheer demographics. The scrappage and usage pipeline will have to be filled eventually."

But, Fraser warned that pipeline might be smaller if three-car families are becoming two-car families and two-car families, are dropping to one-car families.

If the industry does not show improvement soon there could be more layoffs in the auto industry which would hurt the UAW financially as dues payments drop off. In turn, he said, the UAW would have to begin staff cuts.

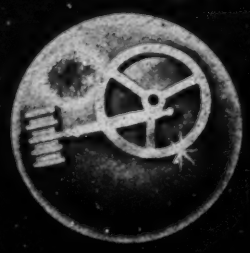
A world of trust...for buyers and sellers.



If you're like most dealers, you're looking for a single source of quality cars and qualified buyers...a source for inventory regulation you can trust, time after time.

You're looking for the world of Manheim Auctions.

Knowledgeable dealers from coast to coast have already found it. They trust the Manheim system of service to give them an unrivaled selection of cars. And they count on its program of comprehensive support services backed by unquestioned professionalism to make balancing their inventories easier, quicker and more pleasant.

But most of all, they have confidence in Manheim's ironclad policy of fair and equal treatment to help them get the cars they need to stay competitive — at competitive prices.

They know there's a world of trust at a Manheim Auction. And you will, too, the first time you visit.

Production milestone comes 5 days earlier than in 1980

U.S. auto makers top 6-million mark

By Patricia Hoffman
Staff Writer

Domestic auto production for the year hit the 6-million mark last Friday (Dec. 4), just five days ahead of the 1980 schedule. Last year the makers completed the six-millionth car on Dec. 9.

So far this year, the auto manufacturers have assembled 6,013,447 units, up just a fraction of a percent from 5,959,411 units in the same period last year.

Downtime at 13 assembly points last week brought auto output up just 17.14 percent above the level of the previous holiday-shortened week. The build, last week was 91,125, compared to the 77,792 built the week earlier. The total, however, was a substantial 35.75 percent below the 141,830 units completed during the comparable week last year, which was shortened by the holiday.

Ford Motor Co. scheduled downtime at eight assembly points last week — Lorain, Atlanta, Kansas City, Chicago, Dearborn, Wayne, Metuchen, and Wixom—all idle for inventory control.

Also down last week was General Motors' Janesville point, idled Oct. 19 for a five-month changeover to the J-car.

GM's Lordstown facility remained down last week. The point was idled Nov. 25, and is slated to return Jan. 4.

Chrysler's Jefferson point was closed last week for inventory control. The plant is scheduled to return today (Dec. 7).

American Motors Kenosha point was idle Nov. 23 for inventory adjustments, with operations slated to resume today.

Volkswagen of America's Westmoreland facility also returns today after being idled three weeks for inventory control.

Checker Motors Kalamazoo point, which closed Nov. 18 for model changeover, is slated to return Jan. 11.

The second shift at GM's Willow Run facility resumed last week with a line-rate reduction from 70 units per hour on two shifts, to 50 units per hour on two shifts.

GM's Linden point also cut production last week, dropping from 56 units an hour on two shifts to 45 units an hour on two shifts, and second shift operations were permanently cut at GM's Southgate facility.

GM's Leeds facility will be idle beginning today for the conversion to J-car production. The point is slated to return Jan. 11.

Breakdown for the week by company is GM, 84.47 percent; Chrysler, 12.07 percent, and Ford, 3.46 percent. AMC, VWoA and Checker Motors built nothing.

Canadian auto production dips 11 pct. as 3 plants shut

Despite the return of Ford Motor's St. Thomas facility and the resumption of a second shift at Chrysler's Windsor plant, Canadian auto production last week dropped 11.14 percent below the previous week's total because of downtime at three car assembly points.

Last week's auto output was targeted at 13,495 units, down from 15,187 in the previous week, and down 33.71 percent below 20,358 in the comparable 1980 week.

Year-to-date output for the auto makers is 755,445, down 4.55 percent from 791,472 in the comparable period last year.

Truck production last week fell a substantial 26.52 percent to 8,692 units from 11,829 completed in the previous week, and the total dropped 33.53 percent below 13,077 in the comparable 1980 week.

So far this year, the truck manufacturers have completed 477,792 units, up slightly from 475,072 in the comparable period last year.

Downtime was scheduled last week (Nov. 30) at American Motors' Brampton car facility. The point, idled for inventory adjustment, is slated to resume today (Dec. 7).

General Motors' St. Therese car facility was idle last week due to poor market conditions, and is scheduled to return Jan. 11, 1982.

Ford's Oakville assembly point was down for the second week last week to adjust inventory. The facility is slated to return today.

Also at Ford, the St. Thomas point resumed operations last week after two weeks of downtime for inventory control.

Chrysler's Windsor point returned to two-shift operation last week, bringing output from 400 units per day to 560 per day.

Ford's Ontario truck facility was idled last week for inventory control. The point is slated to resume today.

International Harvester's Vancouver and Chatham truck points are scheduled to close next week (Dec. 14) for an extensive holiday downtime. The facilities are slated to resume operations Jan. 4.

Quarter century

A. J. Frascona, right, Frascona Buick, Wauwatosa, Wis., receives congratulations on his 25 years as a Buick dealer from the division's general sales manager John D. Duffy Jr.

U.S. truck output for week declines 38 pct. from 1980

U. S. truck production rose substantially last week from the previous holiday-shortened week, despite downtime at seven assembly points.

The truck makers scheduled 23,678 units last week, up 22.66 percent from 19,303 trucks completed the previous week when plants ran just three days due to Thanksgiving day holiday. The total, however, dropped 38.60 percent below the 38,566 units assembled during the comparable — but shortened — 1980 week.

Year-to-date output is 1,534,430 units, up 3.75 percent from 1,478,932 trucks in the comparable 1980 period.

Downtime was scheduled last week (Nov. 30) at five Ford Motor Co. assembly points—Kansas City, Michigan, Norfolk, San Jose and Twin Cities—all idle for inventory control.

Also down last week was General Motor's Lordstown (van) point. The facility is slated to resume today (Dec. 7) minus the second shift.

Volkswagen of America's Westmoreland point was idle last week for its third week of downtime. The facility is scheduled to return today.

International Harvester's Ft. Wayne and Springfield facilities will be idle beginning Dec. 14 for an extensive holiday closing. The plants are slated to resume operations Jan. 4, 1982.

This prototype Mitsubishi CV (for Concise Vehicle) is an experimental town car. Its overall length is 102 inches and it is envisioned with open or fixed top.

83-day supply of new cars on Dec. 1

Stocks soar to record high

By Richard A. Wright
Assistant Managing Editor

The deepening sales slump pushed the domestic new-car inventory higher still during November, despite assembly plant shutdowns, and it stood at an 83-day supply Dec. 1, highest ever for that date.

The domestic new-car inventory totaled 1,489,712 on Dec. 1, up from 1,480,768 on Nov. 1 and 1,439,998 on Dec. 1 last year.

The 83-day supply on Dec. 1 compared with an 81½-day stockpile a month earlier and a much more manageable 65-day stock Dec. 1 last year.

Approximately 400,000 of the Dec. 1 inventory were carryover 1981 models. In addition, the stockpile included over 40,000 of General Motors' new front-drive intermediates, for which a selling rate has not yet been established. If those nameplates are

Table on Page 37

excluded, the Dec. 1 inventory would be an 81-day supply, down from a month earlier.

• Compared with a month earlier, GM, Chrysler Corp. and Volkswagen of America increased their days-supply figures. GM's unit-count buildup was more than accounted for by stockpiling of the new front-drive A bodies, while VWoA's increase was due to a reduced sales rate, not an inventory buildup.

GM had a 77-day supply Dec. 1, unchanged from a month earlier, but its unit count was up about 28,000. Chrysler Corp. had a 103-day supply Dec. 1, up from a 91-day stockpile a month earlier, while VWoA had a 94-day supply of U. S.-built Rabbits, up from a 66-day stock, although its unit count was virtually unchanged.

Ford Motor Co. had an 89-day supply on Dec. 1, down from 91 days a month earlier. American Motors opened December with a 76-day stockpile, down from 87 days on Nov. 1.

The Dec. 1 domestic inventory was divided this way: GM, 58.24 percent; Ford Motor Co., 24.31 percent; Chrysler Corp., 12.96 percent; VWoA, 2.48 percent, and AMC, 2.01 percent.

A month earlier, the domestic inventory was divided as follows: GM, 56.71 percent; Ford Motor Co., 25.74 percent; Chrysler Corp., 12.95 percent; VWoA, 2.51 percent, and AMC, 2.09 percent.

By size class, the domestic inventory continued to be bottom-heavy with a 107-day supply of subcompacts, up from 103 days, and only a 61-day supply of luxury cars, up from 58 days.

The industry had a 73-day supply of compacts Dec. 1, down from 84 days a month earlier, and a 88½-day stockpile of intermediates, up from 75 days. The industry had a 63-day supply of standards, off slightly from 64½ days on Nov. 1.

The Dec. 1 inventory was divided this way by size segment: Subcompact, 30.60 percent; compact, 24.01 percent; intermediate, 28.24 percent; standard, 11.34 percent; and luxury, 5.81 percent.

A month earlier, the inventory was divided as follows: Subcompact, 29.68 percent; com-

Executive board revises a rigid policy

UAW councils given OK to reopen contracts

By Marjorie Sorge
Labor Editor

The UAW executive board has let go of the reins and will let its bargaining councils reopen negotiations if they see fit.

Auto industry officials called the move "positive" and expressed hope that the union's councils would vote to reopen negotiations.

According to UAW President Douglas A. Fraser, the move is geared specifically to American Motors and International Harvester, which have already formally asked for changes in the agreement.

Ford Motor Co. and General Motors have made noises about reopening the current contract but have not formally approached the UAW. Those contracts expire Sept. 14, 1982.

Both Ford and GM have said there is an $8 per hour labor cost disadvantage with the Japanese and they want it back in the next agreement.

After a six-hour meeting, the union's executive board voted, with one dissenting vote, to change its rigid policy of not entering into negotiations with any company before the contract expires.

"Because of the deteriorating economic circumstances we said that a rigid policy doesn't make any sense any longer and there are different circumstances for different companies," Fraser said. "Therefore, everybody's free to act in a manner they feel is best suited for their situation."

He said that does not mean different agreements for each auto company and an end to pattern bargaining. Both those theories have been examined as possibilities in next year's contract negotiations.

Now, the union's councils have the right to reopen the current contract or begin early bargaining but that doesn't mean it is planning to run to the bargaining table. Fraser said there is "no compulsion" for the councils to vote to reopen negotiations. Last March, both the UAW Ford and GM councils voted not to reopen the contracts.

"They'll open the negotiations if they decide that's the intelligent thing to do," Fraser said. "They aren't going to be pressured."

The councils are made up of elected officials from various union locals. Each company has a separate council.

• Some of the officials in the auto companies have tried to pressure the union into reopening the agreements but Fraser warned against such actions. He said statements like Roger Smith's (GM chairman) earlier this month that the UAW-GM contract hurts the auto workers more than it helps them only make the membership more contrary.

"Those speeches don't serve any constructive purpose if he wants to open negotiations," Fraser said. "If he doesn't want to open negotiations, that's a good way to do it."

Fraser denied the union is backing down on its strong stand earlier this year on renegotiations but said times have changed and the situation in the auto industry is "stressful."

While all the automotive companies are feeling the pinch of the industry slump, only AMC and IH have formally asked for changes in the contract.

Earlier this month, the UAW-AMC Council rejected a proposal that employes invest 10 percent of their raises in the company over the next 22 months. That denial went along with the executive board's past recommendation.

That proposal would have generated about $150 million during the 22 months. Workers would have been repaid with interest after the 22-month investment period.

AMC lauded the executive board's decision as "a positive step which can lead to further consideration of the proposed

Forecast '82 predicts a sales gain next year

Sales of new cars in the U. S. will total 9.1 million units in calendar year 1982, up from an estimated 8.7 million this year, according to Automotive News World Outlook, a new feature that bows in Forecast '82, a special section following Page 22.

World Outlook also estimates the import share of the U. S. new-car market will decline to 22 percent in 1982 from 26 percent this year, and that total world car production in the coming year will climb to 32 million units from 28 million in 1981.

Highlights of other Forecast '82 features:

Auto Analyst Arthur Davis predicts there will be a 90-to-120-day strike at General Motors next year.

Marina v. N. Whitman, GM vice president and chief economist, declares 1982 will be "a year of recovery," that the comeback will begin next spring, and record-level annual new-car sales are coming "in the '83 to '85 period."

Highway travel in the U. S. will increase "another 2 or 3 percent" in 1982, according to Peter G. Koltnow, president of the Highway Users Federation.

Auto industry suppliers expect tough sledding although, Federal-Mogul Chairman Thomas F. Russell forecasts vehicle sales will show an "8 to 10 percent sales increase over the depressed 1981 level," and Robert F. Swift, vice president of strategic planning and international, Rockwell International Automotive Operations, expects North American factory shipments of heavy-duty trucks to climb 19 percent.

One of the bright spots in the auto business is the aftermarket, where 10 to 15 percent sales growth is projected for 1982.

breaking news

New Pontiac price leaders

DETROIT.—Pontiac will create price leaders in J-2000 and Phoenix, similar to those reported for Chevrolet (Automotive News, Nov. 16). One or two price-reduced body styles of J-2000 will be offered, and one price-leading Phoenix, with reductions of approximately $700 to $1,000 expected. Officials are still undecided on special model names and timing for introduction.

Toyo Kogyo expects Ford diesel deal

TOKYO.—Toyo Kogyo said it hopes to conclude an agreement with Ford Motor Co. under which it would sell diesel engines for use in Ford Ranger pickup trucks. A spokesman said an agreement on export of transmissions for the Ranger trucks would be signed first. Ford owns 25 percent of Toyo Kogyo, which manufactures Mazda cars.

Wentzville plant on schedule, GM aide says

ST. LOUIS. — Amid reports of management retrenching and stretching out a $40 billion capital expansion program to keep competitive, General Motors has assured the public and labor that its nearby Wentzville assembly plant is proceeding

Economist lists factors that led to growth

U.S. warned it could lose industry

ANN ARBOR, Mich. — The American auto industry is in the process of moving outside the U. S. — and foremost among the losers will be Michigan, warned Prof. Ross Wilhelm, University of Michigan business economist.

"We will only keep the automobile industry here if we restore the conditions that brought about the enormous growth in car ownership from the turn of the century up until the mid-1960s," he said.

Wilhelm, a member of the Graduate School of Business Administration, described four factors that made an automobile-based world for Americans, in a paper he prepared for the Michigan Bankers Assn. Bank Management Conference in Dearborn. The factors follow:

1. Rising real consumer incomes—"Real incomes rose at a rate of over 3 percent a year," he said. "Each year we all had more purchasing power. The growth in real incomes ground to a halt over the past 20 years. The stagnation of consumer incomes pulled out one of the major factors that led to a growth in the long-term demand for cars.

"The Reagan program and the ending of inflation and the resumption of investment are the best cures for stagnation. There is reason to hope we will see this factor again working to raise the demand for cars in the coming decade."

2. A favorable political climate—"The second factor that led to 60 years of high automotive production was a favorable political climate for driving and using cars," Wilhelm said. "We built highways and other facilities and encouraged driving.

• "Over the past 20 years, however, the government, aided and pushed by the Ralph Nader types, has waged war against cars and private driving. The thrust of our public effort shifted against the car and toward ending the importance of private driving. It is questionable whether the political environment for the car is going to improve over time. We simply do not know.

"I suspect more politicians are beginning to recognize the implications for society if we lose the automobile industry."

3. Declining real cost of cars —"The third factor that led to the growth in car ownership over this century was a declining real cost of a car for buyers," he said. "Up until the 1960s the prices of cars did not keep up with inflation and their real cost declined each year. Our growing purchasing power, coupled with the declining real cost of a car, took us in 60 years from a society with no cars per family to one with two cars per family.

"In the 1960s, two factors led to the end of the declining real cost of a car. The first factor was an explosion in government regulation of automobile design and the imposition of enormous government-mandated costs. The attacks on the car not only hit drivers, they also shoved up the cost of building the car in the name of pollution control and safety.

"The second factor that has made the American automobile noncompetitive in its own markets is an explosion in labor costs. Today it costs $1,500 more per unit to produce a car here as against in Tokyo. American labor costs $9 per hour more than Japanese. If these cost differences are not eliminated, it will not be possible to hold the car industry here . . .

"I see no change in the basic attitudes of the unions toward making the state more competitive and radically improving the unemployment compensation and worker compensation mess, and if the attitude is hostile and rigid on these matters, will we see cooperation over wages?"

Wilhelm says that the lowering of interest rates will help reduce costs and help stimulate demand, but he warned that "consumers are not buying cars just because of the high cost of financing. They are not buying because the total costs are too high. The product is overpriced."

Robots and plant modernization are not the answer, he added.

• "Robots and modernizing are poor substitutes for the reduction of government-mandated costs and lower wages," he said. "These are the costs that must come down to save jobs and to save Michigan."

4. Declining real price of gasoline—"This occurred continuously over the period up to 1973 and the Arab oil embargo and the rise in gasoline prices," Wilhelm said. "In 1979 we again had a major rise in the price of gasoline and the results have been a decline in passenger miles traveled in cars, slower driving and a shift to gas-efficient cars. While we now have a gasoline glut and stable prices, this situation will end as the economy comes out of the recession.

"It is unrealistic not to recognize that we face the prospect of rising gasoline prices and declining passenger miles traveled in cars over the rest of the century.

"Thus, as we look at the future of the automobile and the state, there is only strong hope that we can significantly im-

No immediate revival for passive restraints

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The U. S. Court of Appeals here has told State Farm Mutual it will not stay NHTSA Administrator Raymond Peck's decision to do away with the passive restraint standard. Recission of the standard became effective last week.

The effect of the ruling is that auto makers are now rid of a requirement that would have had them installing automatic belts or air bags in their largest vehicles next year and in their intermediate and smallest vehicles over the following two years.

State Farm, the nation's largest auto insurer, had stressed in its court filings that its stay request was in no way an attempt to start a new action but was an effort to preserve a situation that has been in effect for five years and to continue a regulatory program that was launched over a decade ago.

The court had no comment regarding that assertion, but said it would hear arguments on why the decision should be overturned in its February-March calendar.

At that time, State Farm is expected to argue that NHTSA acted in a "arbitrary and capricious manner and in an abuse of its discretion" when it voided the passive restraint rule.

It will say that the safety agency acted contrary to law in disregarding the existence of passive belts that meet the Passive Retraint Standard and relying instead on the design of a single belt that is identical to a manual belt when it is detached.

When he announced his decision in October, Peck said it was the agency's opinion that since drivers and passengers would disconnect the passive belt, it would be only marginally better than manual belts. He said he wanted to avoid another seat-belt-interlock fiasco.

State Farm asserts Peck should have changed the standard to ensure that it would meet the "use-inducing" purpose of the passive restraint standard recognized by the previous four administrators of the safety agency.

By that, State Farm meant Peck should have required that the belt systems have spool release systems, motorized drives and/or ignition interlocks such as found in the Volkswagen Rabbit.

When used, the systems work and are cost effective, State Farm said.

State Farm was joined in its suit by the National Assn. of Independent Insurers, whose membership includes Allstate, Nationwide and others. They are expected to join State Farm in arguing before the court in February.

Building showroom traffic for new cars

GM offers sweepstakes as a lure

By Joseph Bohn
Marketing Editor

DETROIT.—General Motors is using a sweepstakes drawing to build showroom traffic support for its new A-cars and F-cars, officially being introduced Jan. 14.

F. James McDonald, GM president, called the month-long giveaway the "most far-reaching dealer showroom traffic-building activity" ever staged by the corporation.

From Jan. 11 to Feb. 12, GM will offer showroom visitors a chance to win one of 15 new cars. Prizes are Chevrolet Celebrity and Camaro, Pontiac 6000 and Trans Am, Oldsmobile Cutlass Ciera, Buick Century and a Cadillac Cimarron. There are also 1,325 alternate prizes of merchandise.

Some 41 million four-page color inserts will be placed in over 275 Sunday newspapers in the U. S. and Puerto Rico on Jan. 10, announcing the "GM Match and Win Sweepstakes."

Inserts will picture the new '82 GM cars, and 1,300 other prizes to be awarded plus an offer of a free atlas for test-driving an '82 GM car.

Each insert will have an official entry form and a number selected by computer while it is printed.

The winning numbers for new cars and other prizes will be posted in showrooms of nearly 11,000 GM car dealerships on Monday, Jan. 11. By taking the entry form to the dealership, the newspaper reader can determine instantly if he or she is a winner.

No test-drive is required to win.

Anyone who doesn't win instantly can deposit the entry form at the dealership for a "second-chance" drawing to be held after the Feb. 12 end of the sweepstakes in which all unclaimed prizes will be awarded.

Dealers will have entry forms similar to those in the newspaper insert so every showroom visitor from Jan. 11 to Feb. 12 can participate in the "second-chance" drawing.

Persons taking a test drive will receive a big Rand-McNally Road Atlas, mailed to their home. They do not have to enter the sweepstakes to get the Atlas.

There is no cost to enter the contest, and no cost to dealers.

Salesmen who take a customer winning a car in the sweepstakes on a demo ride receive $1,000 from GM.

Lone Star donates limousine to Dallas

DALLAS.—Lone Star Cadillac has donated a Cadillac Fleetwood limousine to the city to use for a year.

Because of citywide belt-tightening, funds were not available to replace the city's six-year-old limousine. Lone Star came forward with an offer to donate a new Cadillac limousine to the city each year.

In ads for new line

Buick Century called a car for all seasons

By Joseph Bohn
Marketing Editor

Buick will use a three-pronged attack on the marketplace during the first quarter of 1982, to sustain its momentum.

While introducing the new front-drive Century, it will also launch a generic campaign and continue supporting remaining car lines in about equal-thirds of emphasis, according to Ned Sale, vice president and account supervisor at McCann-Erickson, Buick's agency.

Century will be pitched on the basis of front-drive, fuel economy and roominess — by now familiar attributes being cast into a new seasonal framework.

The "year of the Century" is the headline for ads which say, "This could be just another year for you. Or, it could be the year of the Century. Especially once you consider the many pleasures . . . Century can bring you season after season."

Using the seasonal approach, copy relates areodynamics to better economy for "blustering" fall winds, front-drive for better traction in winter snows, economical engine choices for spring economy and roominess for summer travel.

Century print will be confined to the five major news weeklies, with single and double-page spreads scheduled.

TV, which reinforces the "seasonal" message, provides all-around views of Century while discussing front-drive, engine availability, passenger and luggage capacity and EPA ratings. The TV ads begin tonight (Dec. 14) on Monday Night Football.

Throughout the second and third quarters, Century will be featured on network news, 20/20, NBC Magazine, the Academy Awards and golf. Century will also be advertised on CBS radio broadcasts of NFL Playoffs., championship games and the Super Bowl.

"Wouldn't you really rather have a Buick?" is the continuing signoff, with the hawk logo.

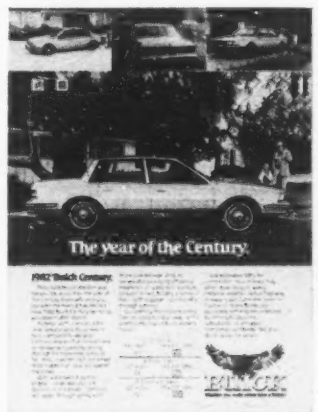
Buick will, at the same time, swing into a generic campaign designed to promote the division's products as a whole.

For example, a print ad headlined "At Buick, we believe luxury and economy can ride comfortably together" shows an engine riding on a luxurious seat in complementary fashion.

Again, "Buicks. What they have in common sets them apart" depicts benefits from the Riviera to the Skylark.

Sale said some monthly magazines have been recommended for product advertising on other car lines, which will continue in the quarter, with no definite commitments or schedules drawn up as yet.

Overall, he said, Buick is seeking to maintain a "certain tonality" of luxury and prestige that have contributed to its success.



Seasonal car

Buick's new Century is being positioned as a car for all seasons, with copy relating front-drive to winter snow, for example, and roominess to summer travel. McCann - Erickson is the agency.

U-M economist warns U. S. it could lose auto industry

Continued from Page 3

prove one of the four major demand factors for cars — consumer incomes. We may make progress in arresting the rise in costs by reducing regulation and perhaps lower wage costs. But it is questionable as to how far we can go."

Wilhelm concluded that "our outlook is mixed. The short-run outlook and the outlook for the decade is favorable for the economy, and the nation. But the outlook for our state is not bright and we have a long way to go to improve it."

• Concerning the national economy, Wilhelm finds that "the experience of the past year strongly supports the forecast that the Reagan program will work. The President has demonstrated clearly he has the support of the American people as well as the political will to make the program work.

"If the people continue to support the President then there is strong hope that over the coming decade we will end our long-term chronic inflation and we will see the end of decline in economic growth and stagnation . . . We should see a return to rising consumer incomes growing at a real rate of 3 to 3.5 percent a year. In addition we should see the end of our chronic and rising unemployment.

"From a political viewpoint we seem finally to have come to the realization as a people that inflation is our primary problem. Perhaps this is premature.

"The real test will be in the election a year from now. If the voters continue to reject big spenders in either party and candidates who do not want to fight inflation, they we will have passed a major corner. We will be on the path to long-term recovery."

Domestic stockpile soars to record 83-day supply

Continued from Page 1

pact, 26.70 percent; intermediate, 26.47 percent; standard, 11.43 percent, and luxury, 5.72 percent.

The Dec. 1 days-supply figures by market class were:

Subcompact—Eagle SX/4, 67; Chevette, 90; Lynx, 92; Rabbit, 94; Escort, 95; LN-7, 103; Dodge 024, 106; Cavalier, 117; Plymouth TC3, 118; EXP, 119; Horizon, 138; Omni, 140; Spirit, 143; T-1000, 149, and J-2000, 157½.

Compact—Omega, 54½; Citation, 58; Skylark, 59; Eagle, 59; Concord, 66; Zephyr, 72; Phoenix, 72; Reliant, 86; Fairmont, 86; Aries, 89; Mustang, 95; Capri, 96; Camaro, 105, and Firebird, 112½.

Intermediate — '81 LeBaron, 52; Cougar, 54; Cutlass, 55; New Yorker, 57; Regal four-door/'81 Century, 69; Malibu, 70; Supreme, 76; Gran Fury, 76; Regal, 79; Bonneville G/LeMans, 79; Grand Prix, 82; Cordoba, 85½: Diplomat, 89; Monte Carlo, 93; Granada, 94; Mirada, 107; Thunderbird, 111; XR-7, 116; '82 LeBaron, 122, and Dodge 400, 195½.

Standard — Olds 88, 43; Pontiac, 56; Olds 98, 58; Mercury, 62; Chevrolet, 69; Electra, 75; LeSabre, 79, and Ford, 82.

Luxury — Lincoln, 35; Eldorado, 48; Mark VI, 49; Cadillac, 54; Toronado, 62; Seville, 68; Corvette, 68½; Riviera, 80; Cimarron, 93; Continental, 98, and Imperial, 124.

Dealers recover quick return in used-car rentals

EASTON, Conn.—Happiness is renting older used cars, say dealers from the hard-pressed Northeast who are enrolled in the Olde'n'Bent Car Rental Plan.

William S. Alley, president of Well Seasoned Advice, Inc., administrator of Olde'n'Bent, said many dealers are getting back their original investment in less than six months even though they are operating very small fleets.

"Most dealers are getting even in two or three months," said Alley. "I put on Phil Roeber, Kingston, N. Y., in August and within two weeks he had most of his money back by virtue of putting out four prepaid monthly rentals."

Alley said other Olde'n'Bent dealers say their retail sales are stronger as a result of rental operations.

editorial opinion

Return the money, Archie

Continued from Page 16

in 1984. Mr. Hayford's loan was to have been reduced in increments of $243,360.

The board's decision, which came to light last January in the annual proxy statement, flabbergasted Chicago business. IH was still reeling from ill-advised and poorly planned decisions that caused a 169-day strike and resulted in a $397.3-million loss in fiscal 1980. The red ink might have been acceptable had IH won any work-rule concessions from the United Auto Workers (UAW). But in fact, IH was thoroughly routed. The company later defaulted on its debt and tallied an unexpectedly deep $636-million loss for fiscal 1981.

That's hardly the stuff bonuses are made of.

During one of Mr. McCardell's infrequent meetings with the public, he justified the IH board's decision to forgive the loans by proclaiming, "I have a contract."

Those words now have been flung back in his face. Mr. McCardell has come to the UAW asking for some $100 million in unspecified labor concessions to revitalize the failing Harvester. And the response from the union rank and file has been unequivocal: "We've got a contract."

The union and the executives both have contracts. But what good are contracts with a liquidated company?

No one pretends that IH's future hinges on recouping $2.8 million in loans to its top two officers. But it does hinge on something more important—recruiting IH employes in the task of saving the company. Securing $100 million in labor concessions from its main union is a key element in that task. There's no guarantee that the UAW will fall into line if Messrs. McCardell and Hayford pay off their loans. But we're quite certain that if they don't, the UAW won't assist in the salvage effort. Contract or no, the forgiveness issue has eclipsed all others in the union's dealings with IH, and rewarding Messrs. McCardell and Hayford after their disastrous financial performance is an insult to stockholders and employes and perverts the collective bargaining process.

We urge Mr. McCardell and Mr. Hayford to decline the scheduled reductions in their outstanding loans for fiscal 1981 and take steps to pay back the $359,250 that Mr. McCardell was forgiven and the $243,360 that Mr. Hayford was forgiven in 1980.

The principles of fair play and honor demand no less.

Power-brake installations set record

Power accessories in high demand in '81

By Joseph Bohn
Marketing Editor

Basic power accessories continue to be in high demand, an AUTOMOTIVE NEWS survey of '81 optional equipment reveals.

A greater percentage of domestically-bulit cars than ever before came equipped with power brakes, while power steering achieved a better than 80 percent penetration.

And electrically-operated windows and rear defrosters held their own, despite the very cost-conscious market which has developed.

Overall, 85.98 percent of domestically-built cars came with power brakes in '81, up from 81.87 the previous year.

With new entries like Cavalier, J-2000, Cimarron and Ford's EXP and LN7, no fewer than 45 car lines, in fact, standardized power brakes, up from 33 car lines in '80.

Industrywide, 5,810,562 cars came equipped with the power-assist brakes, compared with 5,850,171 in '80.

Power steering likewise continued to be widely popular, despite the increase of rack-and-pinion design on new small entries.

Some 83.73 percent of domestic cars came equipped with power steering, compared with 83.83 percent in '80.

Altogether, there were 5,658,765 cars with this accessory compared with 5,989,989 in '80.

Again, there were 35 car lines that carried power steering as a standard item, up from 31 in '80. The option became newly-standard on lines like AMC's Eagle/SX 4 and on the newly-introduced Cimarron.

Rear window defrosters continued holding their own.

They ended up on 50.76 percent of domestic models, compared to a 50.68 percent penetration the previous year.

Altogether, some 3,430,752 cars carried this item, against 3,621,119 in '80.

Rear window defoggers, by contrast, are virtually obsolete. They were offered only on the full-sized Chevrolet, where they accounted for 1.60 percent of production, or 2,960 cars.

(A couple of GM divisions use the term "defogger" to refer to what are essentially defrosters.)

Power side windows improved their popularity last year, climbing to a 23.38 percent penetration from 21.50 percent in '80.

Altogether, some 1,579,871 cars came equipped with the electrical window control against 1,536,314 in '80.

3 dealers added to Peugeot network

LYNDHURST, N.J.—Peugeot has added three dealers in the U. S.

They are: Rivers Ford, Monroe, La., owned by Jack L. Rivers; Cape Fear Motor Sales, Wilmington, N.C., headed by William N. Smith, and Gladstone Imports, Inc., Gladstone, Ore., headed by Edward J. Brusher.

Note: Figures are generally based on U. S. production. However, Canadian-only sourced cars, such as Cordoba/Mirada, are included in some instances; also, some '82-only models, such as EXP/LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,513 Chrysler models, 137,125 AMC and 179,635 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,673,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouths and 311,988 Dodges.

Elite 100 Dealer

Joe Bullard Oldsmobile, Inc., Mobile, Ala., has been named an Oldsmobile Elite 100 Dealer for the fifth consecutive year in recognition of sales achievement. A limited edition model Grenadine was presented to Joe B. Bullard Sr., left, by Jim Schultz, Oldsmobile's Atlanta zone manager.

PAA establishes training program for mechanics

PHILADELPHIA. — An apprenticeship training program for automobile mechanics will be instituted here for the first time under auspices of the Pennsylvania Automotive Assn. and the U. S. Labor Department's Bureau of Apprenticeship and Training.

Some 35 to 40 new-car dealers in the area are cooperating in the program which will be conducted at Spring Garden College, an accredited two-year associate-degree college specializing in mechanical and industrial training.

John J. Hunt, Philadelphia regional director for the federal apprenticeship bureau, said many new-car dealers complain that there are not enough skilled automotive mechanics available. He said a 10-county survey indicated not a single apprentice in the automotive field in Eastern Pennsylvania. Hunt said the new program is being financed entirely through the Private Industry Council by management and labor and will not be dependent on any federal funds.

The course of study and training, which will start in January, will be a four-year program covering eight six-month periods. The curriculum is being developed by a committee headed by Frank Vidion, president of the PAA. Vidion is also president of Vidion Motors Co. (Chrysler), Newtown Square, Pa.

Others on the committee are Paul McMillan, executive director of the PAA, and Dr. George Richmond, president of the Private Industry Council.

obituaries

Frederick James Williams

HAVERFORDWEST, Wales, UK.—Frederick James Williams, 57, national sales manager for Kaiser Jeep of Canada until 1968, when he became a Volkswagen dealer in Sarnia, Ont., died recently in Wales, land of his birth to which he returned in the early '70s. Before joining Kaiser Jeep of Canada in 1963, Mr. Williams had held sales posts with Austin Motor Co. and Rover Car Co. in Canada.

Wayne (Speed) Love

BOURBON, Ind.—Wayne (Speed) Love, 70, owner of Wayne Love Motors, Warsaw, is dead.

V-8, six-cylinder installations decline

Fours, diesels gain strength in '81

By Joseph Bohn
Marketing Editor

The number of four-cylinder engines and diesel engines in '81 model cars continued to climb, while V-8s and six-cylinders lost ground, an AUTOMOTIVE NEWS survey reveals. The setback for six-cylinder powerplants is expected to be only temporary, however.

Four-cylinder gasoline engines are now the most popular powerplants, capturing 37.95 percent of domestic industry production compared with 33.18 percent in the '80 model year.

Altogether, 2,564,497 four-cylinder gas engines were installed compared with 2,371,152 in the '80 model year.

The AUTOMOTIVE NEWS survey also shows an additional 126,174 four-cylinder diesels—equal to 1.86 percent of industry output—being installed in mostly Volkswagens and a few Chevrolet Chevettes. Isuzu supplies the Chevette diesel.

Six-cylinder engines are broken out as in-line and V-6 in this year's table.

The V-6, supplied only by General Motors in '81, accounted for 1,704,059 cars, equal to 25.21 percent of production. The in-line six-cylinder, offered by Ford, Chrysler and American Motors, accounted for 556,413 cars, or 8.24 percent of output. Together, the six-cylinder plants accounted for 33.45 percent of production in the '81 model year.

In 1980, six-cylinders of both variety accounted for 2,652,644 cars, or 37.13 percent of industry output.

The industry didn't offer a six-cylinder diesel on any '81 models.

GM, however, has begun offering a 4.3 liter V-6 diesel on '82 models, and it is expected to become increasingly popular in the future.

Conventional V-8 gasoline engines accounted for 1,476,095 cars, or 21.84 percent of industry output, down from 2,121,560, or 29.69 percent in '80.

American Motors and Volkswagen didn't offer them. But Chrysler installed 58,173 V-8s in 7.93 percent of its cars. That was down from 169,412, or 22.14 percent, in '80.

Ford installed the conventional V-8 in 352,907 or 23.46 percent of its cars. That was down from 479,142, or 34.88 percent, in '80.

GM installed them in 1,065,015, or 25.33 percent of its cars. That was off from 1,473,006, or 32.12 percent, in '80.

V-8 diesel engines continued to gain popularity.

They were offered in only GM cars, where they accounted for 331,025, or 4.90 percent of production. In the '80 model year, they accounted for 306,062 cars, equal to 4.28 percent of production.

GM appoints two

WARREN, Mich. — Donald E. Alexander has been appointed comptroller of the General Motors Assembly Division. Formerly comptroller of GM of Canada, Alexander succeeds Robert L. Pancoast, who has been named comptroller of GM's AC Spark Plug Division.

Rutherford's 25th

Edward C. Rutherford, left, dealer at Der Volkswagen, Roslyn, N. Y., receives a plaque commemorating his silver anniversary from Arthur Stanton, president, World-Wide Volkswagen Corp., Orangeburg, N. Y.

September total is down 1.4 percent from earlier year

Import registrations slide again

By Jenny L. King
Staff Writer

Following the pattern set in July and August, import registrations were down again in September compared with the corresponding month of 1980, according to figures compiled by R. L. Polk & Co.

September import registrations totaled 209,430, down 1.41 percent from 212,429 a year earlier, but up 1.91 percent over the 205,507 reported for August.

Imports' share of the September market slipped to 27.45 percent from 30.26 percent a year earlier, August import share was 28.51 percent. Import penetration has declined each month since hitting its all-time peak of 30.58 percent in May.

Import registrations for the first nine months of 1981 were 1,895,751, slipping behind the year-ago total of 1,898,459 by 0.14 percent. Imports accounted for 28.88 percent of the total U. S. registrations in the first nine months, exactly the same penetration as last year.

Of the top 10 imports in September, Mazda showed the greatest growth in market share up 1.07 percentage points to 6.34 of total import registrations. Also increasing their shares were Honda, up 0.96 of a point to 15.48 percent; Toyota, up 0.64 of a point to 22.38 percent; Plymouth Champ, up 0.40 of a point to 2.21 percent, and Subaru, up 0.13 of a point to 6.44 percent.

Datsun was down 1.35 points to 18.65 percent, VW dipped 0.47 of a point to 10.26 percent, and Volvo's 0.09-point drop lowered it to 2.54 percent of all import registrations in September.

The top 10 imports accounted for 88.69 percent of registrations in September, up from 87.98 percent a year earlier.

Japanese nameplates accounted for 75.89 percent of September import registrations, up from 72.22 percent in 1980. Japanese year-to-date penetration was 75.32 percent, up from 74.46 percent.

German-built imports were a far-distant second for month and year-to-date periods. They accounted for 16.98 percent in September, compared with 19.38 percent a year earlier. German imports earned 17.35 percent of the nine-months import market, down from 18.44 percent in 1980.

Registrations by country of origin in September were:

	Sept., 1981	Sept., 1980
Japan	158,941	153,421
West Germany	35,552	41,165
Sweden	6,542	6,646
France	3,856	3,125
Italy	2,965	3,536
Britain	1,574	4,536

Registrations by country of origin for the first nine months of 1981 were:

	9 mos., 1981	9 mos., 1980
Japan	1,427,934	1,413,499
West Germany	328,829	350,158
Sweden	59,633	49,312
Italy	30,246	34,047
France	33,371	26,967
Britain	15,748	24,468

Registrations of imported trucks in September totaled 45,036, down 10.04 percent from 50,061 a year earlier. Registrations of imported trucks in September were:

	Sept., 1981	Sept., 1980
Toyota	13,493	13,669
Datsun	10,185	10,913
Chevrolet LUV	5,708	7,644
Ford Courier	5,537	6,845
Others	10,113	10,990
TOTAL	45,036	50,061

The truck import total for the first nine months of 1981 was 370,214, down 9.24 percent from 407,923 last year. Registrations of imported trucks in the first nine months were:

	9 mos., 1981	9 mos., 1980
Toyota	97,255	106,879
Datsun	83,984	84,889
Chevrolet LUV	52,683	65,484
Ford Courier	48,631	57,672
Others	87,661	92,999
TOTAL	370,214	407,923

Senate gets bill to repeal tax-credit leasing provision

WASHINGTON. — A controversial provision in this year's tax bill that permitted the struggling Ford Motor Co. and Chrysler Corp. to sell approximately $100 million and $20 million, respectively, in tax credits to large, profitable firms may be on the way out.

Senator Claiborne Pell, Rhode Island Democrat, has introduced legislation that would repeal the so-called "leasing provision" by which corporations buy and sell tax credits and deductions.

"This leasing provision has been in effect for little more than three months, but it is already apparent that it is an unjustified and outrageous raid on the Treasury and the taxpayers," Pell said.

"Indeed, this leasing provision is really a leeching provision because it permits wealthy, profitable corporations to leech billions of dollars from the taxpayers," he said.

The leasing provision was enacted in theory to help firms like Ford and Chrysler. Because they had no profits, they would not benefit from an accelerated depreciation provision also enacted in the tax bill. In practice, though, some big, profitable firms have been the major benefactors.

Congress had originally thought that only about $29 billion would be lost to the Treasury from the leasing provision, but new estimates put the figure at well over $100 billion.

Opposition to the leasing provision has been growing among both Republicans and Democrats.

U.S. new car sales forecast: 9.1 million

By Edward Lapham
Financial Editor

DETROIT. — U. S. new car sales in 1982 should total about 9.1 million units, up 4.6 percent from 8.7 million units in 1981, according to *Automotive News World Outlook*.

The new forecast, a joint undertaking by AUTOMOTIVE NEWS and Data Resources Inc. projects U. S. auto sales will begin the year with a seasonally adjusted annual rate below the 1981 performance, but build to a 9.8-million unit rate by the fourth quarter next year, with the upturn continuing into 1983. Car sales are projected at 10.0 million for 1983. Light-duty truck sales in the U. S. are projected at 2.2 million units in 1982, compared with 2.1 million units in 1981; about 2.6 million units are forecast for 1983.

Although the sales increases in the U. S. are based on the assumption of a recovering economy, and therefore are quite modest, the AUTOMOTIVE NEWS/DRI projection indicates total world production of cars will increase 12.6 percent to 32.2 million units in 1982 from 28.6 million units this year. Modest annual growth is projected thereafter, to about 34.9 million units in 1986.

The 1982 sales forecast of 9.1 million units is lower than earlier DRI forecasts. In early November the firm lowered its forecast to 9.6 million units. In August the DRI forecast was 10.4 million units, representing a 12.5 percent reduction in less than four months.

"The U. S. is now in full-fledged recession as an all-too-abundant flow of negative statistics makes clear," says Otto Eckstein, DRI chairman and Harvard University professor.

Eckstein cites the continuing auto sales slump, increased unemployment and new unemployment insurance claims, declining orders for non-defense real capital goods and bulging inventories as examples of the negative statistics which demarcate the recession.

"This is the eighth recession since World War II, and in many respects is a typical episode," says Eckstein.

"While the timing of this recession will be difficult and inevitably arbitrary, the monthly GNP data suggest that August was the peak; therefore, based on an average 10-month duration, May will be the month of the upturn."

The economist says GNP in the fourth quarter of 1981 is likely to show a five percent decline, drop another two percent in the first quarter, remain essentially flat in the second quarter of 1982, with the potential of a slight 0.6 percent increase in the spring quarter, assuming the turning point comes in April or May.

"The second half of 1982 should show higher growth rates in response to the tax cut and continued recovery in housing activity," Eckstein says. "Inventory corrections should also be complete by then. Consequently, the growth rate for the second half of 1982 is projected at 4.8 percent. What happens thereafter will mainly depend upon our ability to solve our policy problems."

• The DRI macroeconomic model shows some continued problems for the U. S. economy beyond the end of the technical recession, the economist says, with the principal forecast alternative one of continued inflation problems, with response in tightening monetary policy by the Fed and huge federal government budgetary deficits.

However, the economist does concede there are other alternatives: The recession could go deeper if there are a number of financial failures and bankruptcies in the U. S. economy, delaying recovery until fall. There would be "some benefit on the inflation side and the recovery in 1983-84 makes up the lost ground," he says.

The other alternative is a quick end to the recession, with resumed consumer spending at the end of this year and into the new year, increased spending by businesses taking advantage of tax cuts and leading into the "old Reagan scenario" of more investment, improved productivity and "more dramatic and permanent improvements of inflation," but with a nagging federal deficit problem.

Outside the U. S., "the high interest rates which the United States forced on the industrial world and the reluctance of the surviving conservative governments to stimulate their economies is creating a relatively weak 1982 outlook for our principal

Automotive News starts quarterly world forecast

This issue of Forecast '82 introduces *Automotive News World Outlook*, a comprehensive international, economic and financial analysis to be published quarterly and exclusively by AUTOMOTIVE NEWS.

Based on a unique set of North American and international databanks developed by Data Resources Inc., *AN World Outlook* will provide the most timely, detailed and accurate analysis available of the world automotive industry.

Included will be U. S. macroeconomic, financial and automotive outlooks over a three-year period; a world automotive outlook and historical reference by area over an eight-year period; and European new-car registration outlook and historical reference over an eight-year period.

The major databases include:

The AUTOMOTIVE NEWS Databank, largest and most comprehensive source of information on production, sales, inventories, option mix, specifications and prices available on cars and trucks in North America.

Automotive Consumer Profile, consumer research data and historical analysis provided by J. D. Power and Associates.

DRICAR Database compiled from input by Hertz Corp., Recreational Vehicle Industry Assn., National Auto Dealers Assn., Automotive Warehouse Distributors Assn., University of Michigan Survey Research Center, Motor Vehicle Manufacturers Assn., Hilty Insurance Costs, and the U. S. Dept. of Commerce, Environmental Protection Agency, Federal Reserve Board and Bureau of Labor Statistics.

Standard and Poor's Compustat Database of financial statistics for over 5,700 North American companies.

Exstat Database of financial data for over 2,100 European, Australian and Far East companies.

Nikkei Financial Database of financial statistics for over 2,000 Japanese companies.

International Trade Statistics data on trade patterns between over 120 countries.

R. L. Polk & Co. vehicle registration data.

International Automotive Database covering over 30 countries' registrations, imports and exports of vehicles by make, model and cylinder size.

As a joint venture of AUTOMOTIVE NEWS and Data Resources Inc.'s automotive group, the goal of *Automotive News World Outlook* is to provide information and analysis to readers on a continuing and updated basis, well ahead of any other published reports.

Look for it quarterly starting with this issue.

Outlook

Continued from Page E-4

trading partners," Eckstein says.

In West Germany the current growth prospect is for an advance of only 1.4 percent, according to the DRI European Forecasting Group. In Britain, where the unemployment rate was 11.3 percent in October, the 1982 growth prospect is only 1.1 percent.

"In France, where the new government has reverted to traditional liberal stimulus measures, business is so concerned about the switch to socialism that investment will be at low levels and there will be continuing capital flight. In Japan, the 4.2 percent growth rate of the last four quarters was achieved mainly by the continued export boom. Domestic markets expanded at only 2.0 percent. The prospects for 1982 are for more of the same — overly strong export performance and a sluggish domestic economy."

Despite this slow-growth view of the major Western economies, the prospect for growth in passenger car production remains viable.

"The poor recovery in the U. S. will have less impact on the world that it would have had in earlier years because the U. S. share of world trade has been steadily dropping," says Geoffrey Skipper, DRI's director of European Auto Forecasting.

"In 1980 the U. S. absorbed only 6.0 percent of European exports, about the same share as Africa. As a result, domestic developments in the U. S. have less direct impact on the European economies than they had in previous recoveries. The principal effect of the U. S. on Europe is now indirect, through interest rates and exchange rates, rather than direct."

Skipper says the slower growth rates in the U. S. will "somewhat" reduce the European growth rates. Real Gross Domestic Product in the four major European countries is expected to reach only a 1.8 percent real growth rate in 1982.

New car production in Western Europe is expected to rise about 13.5 percent next year to a total of 10.9 million compared with a 1981 total of 9.6 million.

New car production in the six European Economic Community nations will rise about 13.1 percent to 9.5 million from 8.4 million.

The *Automotive News World Outlook* for car production in the U.S.S.R. and the Eastern Europe Bloc nations is not as expansive. Car production in those nations is expected to increase only about 4.3 percent in 1982 to 2.4 million from 2.3 million this year.

North America, with the anticipated recovery in the U. S. and Canada, is expected to build about 9.4 million new cars next year, up 22 percent from 7.7 million in 1981.

Latin America auto production will grow at a 5.5 percent rate next year, the *Outlook* says, to a total of 1.35 million compared with 1.28 million this year.

Car production in Oceania should remain fairly static, increasing just 0.5 percent to 391,000 from 389,000. Asian car production is expected to increase 5.6 percent to 7.5 million from 7.1 million.

One of the current concerns in the European car markets is the increasing penetration of Japanese makes — something U. S. auto makers are closely watching — for solutions, inspiration or other clues to eliminating the "problem" of a large market share for Japanese makes.

In Italy, where the government has restricted the number of Japanese imports, there will be no noticeable penetration. Penetration by domestic makes is expected to increase in 1982 along with a recovery of total new car registrations, to 60.7 percent from 56.7 percent this year, and remain fairly consistent even when the market turns down slightly in 1985 and 1986.

DRI data, on which the *Automotive News World Outlook* is based, shows projected scrappage rates plus human population, personal per capita financial information and other statistics.

'One of the current concerns in the European car markets is the increasing penetration of Japanese makes— something U. S. auto makers are closely watching for solutions and inspiration.'

DRI projects that Italian car ownership per capita will increase 327.2 per thousand to 353.4 per thousand in 1986.

DRI also projects that auto productivity (production per employe), which has been increasing slightly in Italy, will make another good gain in 1982 but then begin to tail off, beginning in 1985. The average annual rate of change for the 1981 to 1986 period is expected to be 0.31 percent compared with a 3.75 percent rate for the 1976 to 1981 period. DRI projects the auto unit labor cost in Italy for the 1981-1986 period will rise at an annual rate of 11.71 percent compared with a 20.62 annual average rate in the 1976-1981 period.

In West Germany, where per capita car ownership is currently about 401.7 per thousand and will expand to 441.8 per thousand by 1986, Japanese penetration is expected to decline from 10.3 percent in 1981 to 9.6 percent next year and 4.5 percent by 1986.

West German auto productivity is expected to continue growing at a very good rate, according to DRI, with an average annual rate of change of 8.56 percent between 1981 and 1986 compared with an annual average rate change of minus 0.14 percent in the 1976 to 1981 period.

Auto employment will decline, DRI projects, but the average earnings index will grow at an annual rate of 6.62 percent in the 1981-1986 period compared with a 7.08 percent rate in the 1976 to 1981 period.

• The unit labor cost index is expected to rise slightly between 1981 and 1982, but then decline at an average annual rate of 0.67 percent between 1981 and 1986, compared with an average annual gain of 4.22 percent in the 1976 to 1981 period.

In the United Kingdom de facto restrictions on Japanese imports and the resulting joint ventures between British and Japanese companies will reduce the share of products imported from Japan to 9.9 percent in 1982 from 11.1 percent this year. The rate will drop under 10 until 1986, when it will jump past that benchmark, the *Automotive News World Outlook* projects.

Per capita car ownership in the UK is expected to go from 275.3 per thousand in 1981 to 286.1 per thousand in 1986.

The continuing economic problems in that nation will reduce the auto workforce further, DRI projects, at an average annual rate of 0.33 percent in the 1981-1986 period compared with an average annual decline of 4.92 percent in the 1976 to 1981 period.

Auto industry productivity which declined at an average annual rate of 1.57 percent in the 1976 to 1981 period is actually expected to increase by an average annual rate of 3.69 percent in the 1981 to 1986 period.

As a consequence, the auto unit labor cost index in the UK is expected to increase at a 3.86 percent average annual rate between 1981 and 1986. In the 1976 to 1981 period it rose at an average annual rate of 17.75 percent.

Still, the average earnings index is expected to increase at an 11.75 percent average annual rate through 1986.

In France, where the new socialist government has caused some unsettled business and economic conditions, per capita car ownership is expected to continue to rise, the 1981 rate of 360.8 per thousand to 399.4 per thousand in 1986. The Japanese share of the French market is expected to remain under three percent.

Unlike several of the other major European countries, France is expected to have higher average auto earnings index growth rate over the next several years. According to DRI projections, the average annual rate increase will be 15.91 percent compared with an average annual rate increase of 13.33 percent in the 1976 to 1981 period.

Productivity, however, is expected to also increase at a faster rate; in the 1976 to 1981 period the average annual rate of increase was 1.18 percent but it is expected to be 5.39 percent in the 1981 to 1986 period. The unit labor cost index, which increased at an average annual rate of 10.17 percent in the 1976 to 1981 period will grow at an average annual rate of 9.52 percent in the next five years, DRI projects.

In the United States, by comparison, auto production employment, pegged at 735,000 in 1981 by DRI, is expected to jump to 821,000 next year and 869,000 in 1983 and then level off. The average earnings index will grow at a 10.55 percent average annual rate in the 1981 to 1986 period compared with an average annual growth rate of 8.56 percent in the 1976 to 1981 period. The auto unit labor cost index, which expanded at an annual rate of 9.76 percent in the last five years is expected to increase at an average annual rate of 6.97 percent in the next five years.

Productivity, which has become a rallying cry in the U. S. auto industry and the entire business sector, actually had an average annual decline of 1.0 percent in the 1976 to 1981 period, according the DRI data, and is expected to grow at just an average annual rate of 0.41 percent.

In Japan, the average earnings index increased at an average annual rate of 7.47 percent in the last five years, and is expected to increase at an average annual rate of 6.22 percent over the next five years.

Productivity, which had been improving at an average annual rate of 6.29 percent in the 1976 to 1981 period is anticipated to grow at an annual rate of 3.01 percent in the 1981 to 1986 period.

The auto unit labor cost index actually declined by an annual average of 0.78 percent in the 1976 to 1981 period, but will increase at a projected rate of 2.35 percent in the 1981 to 1986 period, DRI projections indicate.

The significance of these projections is clear: U. S. auto makers are working at a growing disadvantage in the world auto market.

The U. S. economy is adversely impacting the European economies, but not to the point where they are unable to take the necessary actions to offset at least a portion of the effect.

The ability of European producers to improve the productivity and unit cost situations at a greater rate than U. S. manufacturers, even though they may be starting from a lower base, will put competitive pressures on the U. S. car makers.

Even in Japan, where heralded productivity gains are not expected to be maintained, reducing the rate at which Japanese makers widen the competitive gap over U. S. makers has a caveat: There will likely be new pressures to increase volumes in export markets and once again improve the ratios and indices.

In the final analysis it is very clear that U. S. makers are in a crucial period, and that all developments affecting their competitive position will be very important in 1982.

'The ability of European producers to improve productivity and unit cost situations at a greater rate than U. S. manufacturers will put competitive pressures on U. S. car makers.'

Highway travel may be a bumpy ride

By Peter G. Koltnow
President, Highway Users Federation

What does 1982 have in store for highway use? One doesn't have to be a prophet to point out that since highways are the heart of America's transportation system, our need and use of them will continue to grow.

Highway travel during the past decade grew most years because of more licensed drivers and increasing amounts of freight hauled by truck.

These trends are likely to continue. The National Transportation Policy Study Commission estimates that auto travel will grow about 70 percent during the last quarter of this century, while truck travel rises a whopping 140 percent.

In 1974, travel fell 2.4 percent because of the Arab oil embargo. During 1979 and 1980, highway use dropped about one percent annually because of rapidly escalating motor fuel prices, occasional petroleum supply disruptions and high inflation rates. Road use could be temporarily discouraged by the recurrence of such circumstances.

But in 1981, we saw a return to traditional travel patterns, including the family vacation by automobile. Although some hotels have had a rough time because of greater room fees, national parks and campgrounds had a banner year. Despite high interest rates, recreational vehicle sales are up 38 percent over 1980.

About four out of five vacations are taken in the private automobile. Of 1,000 people recently surveyed by the U. S. Travel Data Center, 45 percent said they plan to go on vacation in the fall and winter months. Over half these respondents plan to use a car, truck, recreational vehicle or bus to make their trip.

It's not hard to understand why. Our extensive road network provides easy access to practically any destination. Although gasoline prices are far higher than several years ago, they actually dropped slightly over the spring and summer, a fact that was well-publicized.

Koltnow: America's roadways are wearing out.

Costs per gallon aren't snowballing as they did in 1979-80, and people aren't worried about finding gasoline. Coupled with more fuel-efficient automobiles, these are strong incentives to use America's highways.

Travel usually peaks during the popular vacation months of June, July and August. Through this August, travel was up 2.6 percent over 1980. By the end of the year, travel will probably still be up two to three percent overall, possibly near the record trillion-and-a-half miles set in 1978.

Based on this pattern, and barring any unforeseen circumstances like a deep recession, travel on the nation's roads should increase another two or three percent again next year. Despite short-term fluctuations, highway use will probably continue to grow at this rate — or greater — until the end of the century and beyond.

But highway travel may provide an increasingly bumpy ride. Road conditions have deteriorated during the past several years, and are likely to get worse before they get better. America's great roadway resource is simply wearing out.

• The U. S. Department of Transportation's latest highway needs report pointed out that the condition of road surfaces worsened significantly from 1975 to 1978. According to recently compiled federal data, over half the nation's most traveled streets, roads and highways are in a "deteriorated" or only "fair" condition.

Interstate highways, for example, built for a 20-year design life, are aging at a rate requiring reconstruction of 2,000 miles annually. More than 8,000 miles of the system are now beyond design life, and some require reconstruction or rehabilitation. DOT estimates that unless remedial action is taken, 83 percent of the Interstate will be in poor condition by 1995.

Meanwhile, fuel consumption is dropping, due mainly to more fuel-efficient motor vehicles and conservation habits. So far this year, gasoline consumption is down four percent from 1980. As a result, revenues for state and federal highway programs, funded mainly from excise taxes on motor fuel, have declined. Fuel consumption and revenues will likely drop again in 1982.

Consequently, most states are hard-pressed to maintain their streets and roads, let alone build new ones. And that can hurt economic expansion. Mobil Oil recently scrapped plans to develop a huge, multi-million dollar residential and commercial

Thank you, dealers, for making the Oakleaf SX-330 the largest selling dealership computer ever. You have made it the standard of the industry, and we sincerely appreciate it.

Now until December 31, 1981, just $6900* buys the computer specifically designed for you ... with quality Oakleaf programming by our trained personnel. Oakleaf has written tens of thousands of programs for automotive dealerships, and has installed thousands of SX-330's in dealerships across the nation. That's experience you can count on.

The SX-330 features the sleek single-unit design that revolutionized automotive computers. And you get exactly what you need. Complete F&I flexibility. Fast computerized printing. Simple learning and easy using. Large LED prompting display to lead you through each deal and point out the ways you can add to your own bottom line. Everything you need to close more deals and put more profits in every deal.

So get rid of your credit bureau terminal, replace your old outmoded computer and step up to the Automotive Dealership Computer that is the workhorse of the industry. At a price like this you may want to get additional SX-330's for your other departments. And adding SX-330's to your Oakleaf MP-16 System is a perfect way to expand ... for less.

For more information or the telephone number of your local Oakleaf representative, call Barbara Jennings, National Marketing Department, (800) 423-3681, or in California (213) 989-5989 collect. Do it now, because this limited offer does expire December 31, 1981.

Highways

Continued from Page E-10

complex in Montgomery County, Md., because of inadequate state and county provisions to relieve traffic saturation. Instead, Mobil's $360 million investment, and 7,000 new jobs, will go elsewhere.

In addition to a revenue decline, the purchasing power of highway dollars is undermined by inflation. Highway construction costs rose almost 350 percent between 1967 and 1980, while maintenance costs grew about 275 percent.

And the share of total highway expenditures for construction and reconstruction has dwindled. In 1980, capital costs accounted for only 43 percent of all highway spending, down from 59 percent in 1970.

Most states have taken steps to help offset deteriorating pavement and inflated highway costs. This year, 36 states either raised highway user charges like motor fuel taxes and vehicle registration fees, or tapped other sources for aid—such as severance taxes, bond issues and general fund transfers.

• But by and large, these measures barely keep up with the problem. Whether as many state legislators and governors will be willing to risk similar actions in 1982—an election year for many—is uncertain. What is certain is that states as well as the federal government will have to bridge the gap in highway funding periodically over the next decade.

The problem at the federal level is particularly acute because Congress and the Administration have been slow in coming to grips with the degree of funding needed to repair the nation's highways. Inflated costs versus decreasing revenues could form a collision course for America's roads unless an effective highway program is enacted in 1982.

But despite its problems, our highway system will continue to be the prime mover of goods and people. It will continue to serve as the prime determinant of industrial location and an essential part of the American assembly line.

Those industries that rely on highway transportation have their work cut out for them to ensure that the long-term outlook is not just greater highway use but a better, more efficient transportation environment.

These simple truths will remain with us in 1982 and throughout the foreseeable future.

Because motor vehicle travel is up two to three percent in 1981, it is assumed by some that income to the Federal Highway Trust Fund, which finances federal-aid highway programs, is also growing. Actually, income to the Trust Fund is declining and has been since 1979.

The Highway Users Federation's preliminary figures show Trust Fund income for federal fiscal year 1981, which ended September 30, was $7.326 billion, compared to $7.647 for 1980 and a record $8.047 billion for 1979.

The federal four-cent per gallon tax on gasoline and diesel fuel accounts for the biggest share of Trust Fund revenues.

Although travel is up, Trust Fund income is down primarily because of declining gasoline sales as a result of more fuel efficient vehicles. The slump in motor vehicle sales also means less Trust Fund income from taxes on trucks, trailers, original equipment tires, parts and accessories.

By the close of fiscal year '81 (September 30), Trust Fund income from fuel was down to $4.28 billion, a three percent decrease from the $4.42 billion collected in fiscal year '80. In comparison, the Trust Fund derived $4.83 billion from motor fuel sales in '79.

The Trust Fund was set up by the Highway Revenue Act of 1956.

The balance in the Trust Fund at the beginning of fiscal year '81 (October 1, 1980) was $10.999 billion, and '81 Trust Fund expenditures were $9.118 billion. The balance at the start of fiscal year '82 (October 1, 1981) was an estimated $9.207 billion.

Output forecast: 7 million cars

The U. S. economic outlook appears bleak for the 1982 first half, but Federal-Mogul Corp. expects recovery to set in sometime during the latter part of the year.

"Although the recovery should be well established by year-end, the various figures used to gauge economic performance will not be very impressive," says chairman Thomas F. Russell.

"We anticipate the Gross National Product will show less than one percent growth in 1982, and the inflation rate will drop to an eight or nine percent rate from the 10.5 percent rate we've estimated for 1981," he says. "We think interest rates will remain high in response to tight monetary policy and the demands placed on financial markets by government borrowings.

"Since there will be little opportunity for substantial improvement in U. S. industrial production until late in the year, the unemployment rate should remain high pending renewed business activity."

Because the general economic climate will directly affect domestic automotive operations, Federal-Mogul expects vehicle sales will show an unspectacular eight to 10 percent sales increase over the depressed 1981 level. In terms of units, the company predicts U. S. car production will total about seven million compared with about 6.4 million in 1981.

Russell remains confident.

Total domestic and imported car sales in 1982 should reach the 9.6 to 9.8 million mark, according to Federal-Mogul, with the pace of both production and sales gaining momentum in the latter part of the year.

"Continuing high interest rates have certainly contributed to the depression in automotive sales, but we feel the most profound reasons for the situation can be traced to high car prices or sticker shock and depressed real personal income," Russell says.

"Despite the generally unfavorable outlook for the near term, we remain confident that once the recovery begins there will be the basis for a sustained period of growth, both for the national economy and the automotive industry."

Die casters depend on economic policies

The 1982 scenario for the U. S. die casting industry depends on President Reagan's economic policies and moves in interest rates and inflation during coming months, according to Peter A. R. Findlay, president of the American Die Casting Institute.

Facts of economic stimulation and psychology of industrial purchasers during 1982 will impact on die casting sales, he says. At the moment, however, all manufacturing industries will have to "hang in."

He adds that "there is optimism of better times ahead, and die casters should be prepared to maximize future opportunities."

The industry experienced a flat 1981, with die casting metal consumption (in tons) near 1980 figures. Industry usage of aluminum is expected to decline 1.7 percent, zinc to increase 1.9 percent and magnesium (a much-less-used metal) to drop 21.7 percent.

Sales volume in 1981 for the entire die casting industry was expected to decline 5.6 percent from $5.75 to $5.42 billion. In addition to the weak economy, a contributing factor was the decline in the price of aluminum ingot.

Source: American Die Casting Institute

Findlay traditions are being shattered by the current economy. Formerly, involvement in automotive, appliance, defense or other sectors would signal growth when those sectors expanded. Today some die casters in a selected market are extremely busy while others are slack.

This is because of product mix. Suppliers to small cars, for example, have robust sales. "Success in the 1980s will depend on management's careful analysis of those new jobs and customers that offer maximum sales potential for the future," Findlay says.

As for the future, aluminum, high-aluminum zinc alloys and magnesium offer bright marketing opportunities for die casters, according to three metal specialists. Motivating factors include new requirements for lightweight parts, new production developments and new sources of supply, say G. Leslie Armstrong, vice president of metallurgy and technical services for U. S. Reduction Co.; Dean Ferres, marketing consultant, Fercom Group; and Joseph Viland, sales director for Amax Specialty Metals Corp.'s Magnesium Div.

"Aluminum is an important material for die casters because it can be used in alloying elements to produce certain desired characteristics not present in either of the two materials alone," Armstrong notes. "Aluminum is also a critical factor in hypereutectic alloys that contain 16 to 18 percent silicon. A base of 70 percent aluminum is used in producing these materials designed for hardness and wearability."

According to Ferres, two new high aluminum zinc alloys, first employed in the 1970s, are opening new frontiers for zinc in gravity castings. "These new alloys—Tg 12 and Tg 27—provide significantly better tensile strength and hardness accompanied by natural lubricity with only a modest difference in cost," Ferres notes.

"The alloys can substitute for conventional zinc or aluminum castings that have failed, can replace parts machined from iron, can supplement aluminum in some applications, can frequently permit the elimination of inserted bearings for cost reductions, they provide finishing versatility, and may replace bronze in many applications."

"With 30 years of use, magnesium has proven to be a metal whose future is today," Viland claims. "In past years, magnesium has suffered from scarce availability, dramatic price increases and the high energy costs to refine it. Today, there are several metal suppliers and energy costs are not far above those for other metals.

"Because of an expected excess of supply the next five years and the material's proven performance record, magnesium offers die casters good business opportunities," he says.

• Die casters have developed an enormous interest in productivity the last few years, according to William T. Andresen, technical director for the American Die Casting Institute, the trade association of the $6 billion die casting industry.

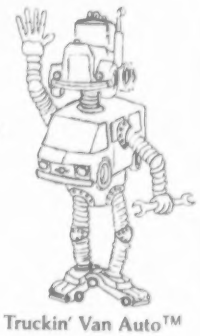
Building on this interest, ambitious research programs have been set for the next five years, Andresen says, especially to improve the life of aluminum die casting dies.

"By 1983, research will be completed to determine the effect of sulfur on the performance of H-13 die steel and to create a manual that explains proper care and use of die steels," he says.

"The effects of forging on the performance of die steel will be studied for the next three years and by the end of 1984 we hope to report on effects of corrosion."

TryaD ENTERPRISES

. . . aim to increase your showroom traffic this New Year with TRYAD ENTERPRISES!! Merry Christmas



Tryad Enterprises is offering the Truckin' Van Auto™

VERY PRIVATE 4 HOUR SALE

For An Unbelievably Low Price.

Read this letter carefully, as it will be your only notice regarding this sensational offer. Due to the special Holiday prices, no mention of our offer will appear on radio, television, or your local newspaper.

YOU KNOW IT WORKS!!

We Will Offer:

- 2 color copy
- #10 window envelopes
- complete mailing service
- updated labels
- customer giveaways
- uniformed guard
- professional greeter as host
- sales motivation meeting

Including "rebate checks" at your request.

•••• A One Price Opportunity •••••

Every dealer holding our sale will be given Absolutely Free, diamond pendants and/or diamond earrings.

Note: These are genuine diamonds—not synthetic. Limit: 100 per dealership.

So, in order to avoid disappointment, be sure to contact us for available dates immediately.

••••• Get out a red pencil and CIRCLE the dates •••••

WHEN? January 15, 1982 thru February 15, 1982.

WHERE? At your dealership.

SELLING PRICES:

5,000	Mailer	$2040.00
8,000	Mailer	$2485.00
10,000	Mailer	$2895.00
12,000	Mailer	$3350.00
15,000	Mailer	$3710.00
20,000	Mailer	$4350.00

GUARANTEE & TERMS: Contract will explain all financial arrangements.

NOTE••• Our agency will not authorize these "Once Only Prices" in California, Washington, Georgia, Florida or Canada.

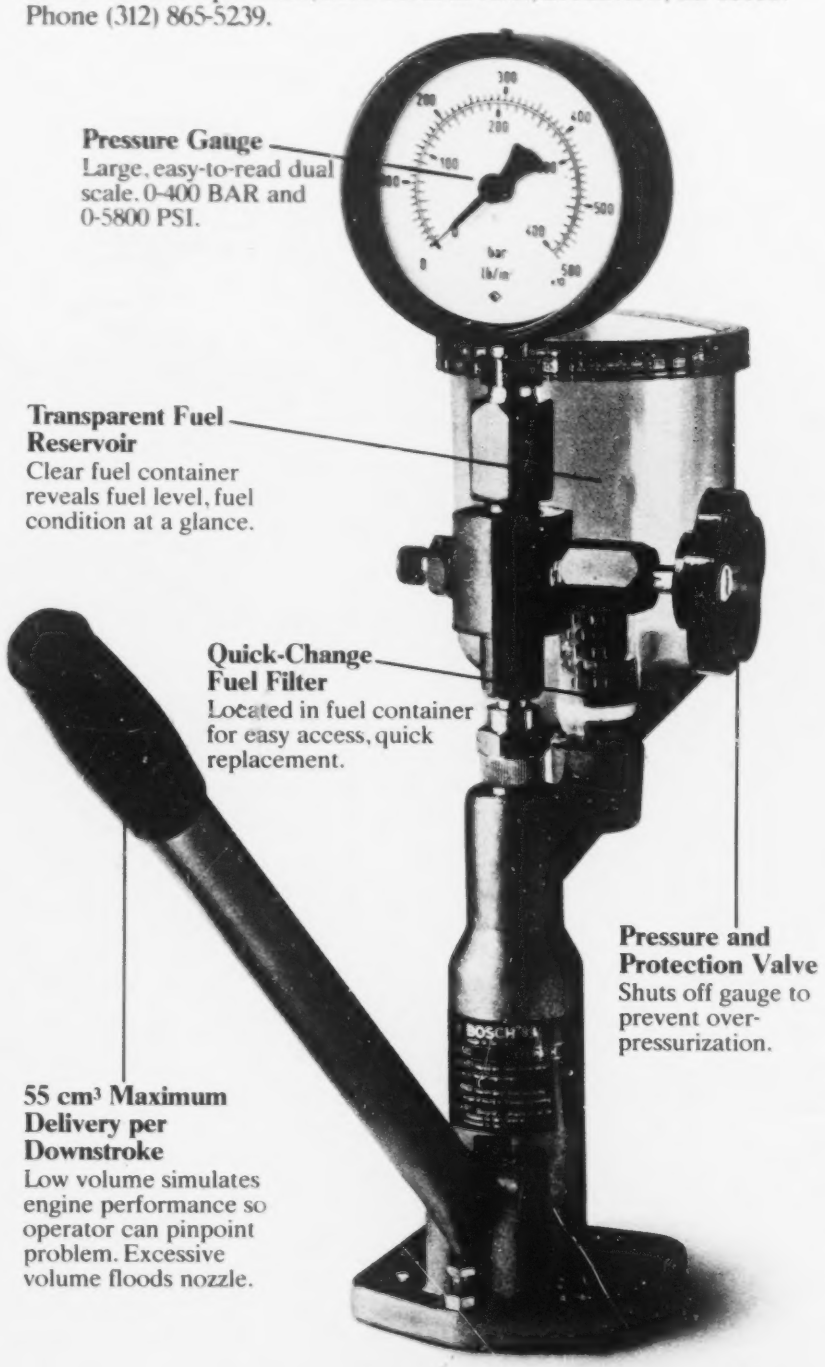
Take the guesswork out of diesel diagnosis with a Robert Bosch Nozzle Tester

When a customer brings in a diesel car for service, are you equipped to check out the injection nozzles then and there? Or do you assume that the nozzles are defective and return them to the factory? Or pay a shop to have them tested? Either way, you lose money and your customer loses patience.

With a Robert Bosch Nozzle Tester you can check opening pressure, leakage, chatter and spray pattern. Within minutes you and your customer will know whether the nozzles are working. Go with a leading brand of nozzle tester—Robert Bosch. For further information, contact your nearest Robert Bosch Diesel Distributor, or Dept. S-ASW, Robert Bosch Sales Corporation, 2800 So. 25th Ave., Broadview, Ill. 60153. Phone (312) 865-5239.



Pressure Gauge
Large, easy-to-read dual scale. 0-400 BAR and 0-5800 PSI.
Transparent Fuel Reservoir
Clear fuel container reveals fuel level, fuel condition at a glance.
Quick-Change Fuel Filter
Located in fuel container for easy access, quick replacement.
Pressure and Protection Valve
Shuts off gauge to prevent over-pressurization.
55 cm³ Maximum Delivery per Downstroke
Low volume simulates engine performance so operator can pinpoint problem. Excessive volume floods nozzle.

Electronics jumping

The U. S. market for original equipment auto electronic systems will jump from $1.6 billion in 1980 to $17 billion by 1995, says Predicasts Inc.

The Cleveland-based business information and market research firm says this represents an expenditure of $1,380 per car in 1995, up from about $250 in 1980.

Real growth in OEM electronics will average 12 percent annually, with price increases boosting sales gains to 17 percent per year through 1995.

Predicasts notes the industry will be less affected by inflation than the economy as a whole due to increased economies of scale and the ability of several electronic components to combat inflationary pressures.

The study targets engine control and safety systems as two sectors expected to witness particularly rapid gains. Primarily as a result of growth in electronic fuel injection, engine controls will near $5.4 billion in 1995, up from $278 million in 1980.

As auto makers strive to control noxious engine emissions and increase fuel efficiency — efforts prompted by government intervention — the development of sophisticated control systems becomes paramount.

The study states that it is "apparent that traditional electromechanical, mechanical and fluid power systems are not sufficient to yield the performance standards legislated for the future; only a computerized system of sensors and adjustments can accomplish the task."

Electronic safety systems — including brake and restraint systems as well as anti-theft devices — will witness a sales growth in excess of 38 percent annually, reaching $4.2 billion in 1995.

Although Predicasts does not anticipate mandatory implementation of passive restraint systems, the study does expect sales to be bolstered by tax and insurance incentives, if not legislative ones.

Ignition systems, already standard on gas-driven American cars, will nevertheless reach $2.8 billion in 1995. Entertainment and comfort systems are also a comparatively mature market. Predicasts attributes their $2.6 billion 1995 market primarily to increases in auto production and consumers' trade-up to multi-band radios or tape player/radio combinations. As a percentage of originally installed electronics, this sector's market share will decline.

Predicasts analysts observe growth in other electronic systems such as electronic clocks, voltage regulators and delayed wiper systems. Trip computers have the greatest potential in this sector due to their appeal to "Americans' penchant for gadgetry."

Predicasts analysts observe that although electronic engine control systems are important, they are not glamorous, and they expect auto makers to draw customers on the basis of more tangible passenger-compartment electronic features.

The auto electronics boom is expected to result in a $3 billion OEM market for electronic components by 1995.

Product demand flat until last half

Demand for automotive products will continue in the first half of 1982 at the current 1981 level, followed by a noticeable upturn in the second half, according to William A. Raftery, president of Motor & Equipment Manufacturers Assn. (MEMA).

"Throughout the rest of this year and 1982," he predicts, "we'll see continuing improvement in the demand for shop-related services as motorists continue to stretch out the age of the average vehicle and accumulate maintenance and repair requirements."

Continuing economic uncertainties in the first half, he believes, will keep a clamp on consumer spending, with demand registering more for functional necessities and fluctuating with the availabiilty of field inventories.

Both manufacturer and direct-buying customer, contends Raftery, will continue to pay close attention to asset management. New product introductions will be subject to more advance research and testing than ever, he foresees, with continued trimming of unproductive lines and further inventory tightening more the order of the day.

Suppliers will put more emphasis than ever on cash flow, while their customers will be looking at the same time for more financial support, according to Raftery.

Ironically, he notes, the continuing need for tight inventory management and credit and cash control are helping MEMA's efforts to extend its Transnet Division's order entry and price update services, the services of its Credit Information Group, and services of its Collection and Rehabilitation Group, to a broader base in the industry.

"We established all three of these facilities," he relates, "in response to needs evolving in relatively good times for the industry. Now, for some companies, they are proving to be timely and valuable contributors to current cash-flow needs."

Lease and rental market bullish

By Francis J. Gawronski
Service Editor

Things are bullish in the automotive fleet business for 1982.

With companies and individuals leasing everything from cars and trucks to computers and airplanes, equipment leasing in the U. S., according to industry sources, doubled in 1980 to $30 billion. Currently, nearly 25 percent of all equipment purchases are leased, compared to 10 percent a decade ago.

There are few reasons to convince forecasters that leasing and rentals will not continue to climb in the years ahead.

Fran Hazelroth, director fleet programs, U. S. Automotive Sales, Chrysler Corp., is typical of industry executives expressing optimism.

With fleet sales of cars and trucks amounting to 166,000 units in 1981, the company is forecasting a 12 percent increase in 1982, or some 175,000 units.

Another optimistic outlook comes from Hal Barton, leasing and fleet sales manager, Lincoln - Mercury Division, Ford Motor Co.

Noting that L-M dealers delivered 27 percent more cars to fleet buyers during the 1981 model period (121,219 units) than in 1980 (95,529), Barton says 1982 fleet sales are expected to rise 15 percent over 1981.

Other auto makers oozing confidence about 1982 fleet business are Pontiac which forecasts a 35 percent increase over 1981; Chevrolet, up 20 percent; Ford, 17 percent; Buick, 13 percent; and Oldsmobile, 10 percent.

The bright outlook for the lease-rental industry is endorsed by Bennett E. Bidwell, president, Hertz Corp., New York, during a speech at a recent meeting of the American Automotive Leasing Assn.

Bidwell, a former vice president of Ford Motor Co., noted the industry has changed during the past five years, in the direction of expansion and increased

Fran Hazelroth

Bennett Bidwell

profits, if not better margins.

Bidwell said that because "this industry has grown in the face of weakness in the auto industry, in the economy generally, and in spite of interest rates and money market conditions that could well have choked it, bodes well for its future in happier economic circumstances.

"The current rising curve of leasing sales must be linked then, to what some economic observers call a trend away from ownership in America today," Bidwell said. "Until recently, possession wasn't merely nine-tenths of the law, it was nine-tenths of everything."

Bidwell said that, over the last 10 years, ownership has been yielding to usership. Mortgage money is tight and many families are thinking twice about trading up to bigger homes or to bigger cars.

"The truth is, with gasoline at the pump about $1.50 and more per gallon, and the price of a new, midsized car averaging out at $8,000 or more, the automobile seems not quite the investment it once was," Bidwell said.

As a hedge against inflation, according to Bidwell, "safety against depreciation is the most highly prized asset of all, and ownership of that most depreciable of all assets, the automobile, is becoming increasingly less exciting.

"Yet America remains a nation on wheels, and as ownership declines, that points to only one thing—new growth in the rental and leasing markets," he said.

"The rising cost of owning an automobile will encourage even the average retail customer to consider leasing as a preferable alternative, while corporate fleet usage will see dramatic growth," Bidwell predicted.

"High interest rates will stimulate the use of floating rate lease arrangement," he said. "Already these factors have been reflected in the growth of the closed-end lease marketplace.

"More and more dealers are stressing their leasing programs, while banks and other lending institutions have become increasingly involved in leasing, either directly, or by buying paper from dealers and independent lessors," Bidwell said.

According to Bidwell, the rising cost of all aspects of owning and operating a vehicle have prompted the larger lessees to seek professional management programs.

In the case of smaller fleet operators, Bidwell said the closed - end, full - maintenance contract has taken on new attractiveness as a method of holding costs steady and predictable.

Bidwell said the recently passed Economic Recovery Act of 1981, which redefines and liberalizes leasing, also will serve as an incentive for more individuals and companies to enter the leasing market.

"In short, leasing or renting is becoming a new way of life in this country," he said. "In the mid-term, it will continue to grow."

• As for fleet composition in 1982, administrators are ordering more smaller cars powered by smaller engines.

Seventy-five percent of 1982-model-year new-car orders will be for compacts and subcompacts, according to a survey of its members by the National Assn. of Fleet Administrators (NAFA), New York. The figure for 1981 was 60 percent.

NAFA says fleet managers of 124 commercial fleets it surveyed plan to buy or lease more than 39,000 new cars in the 1982 model year, compared with 37,000 acquisitions in the 1981 model year.

Thirty fleet administrators reported they will order four-cylinder engines in their compact and subcompact cars; 10 said they would order six-cylinder engines, and five indicated they would order diesels for the first time in 1982.

More than 60 percent of the new cars will be four-door sedans and five-door hatchbacks.

Driver comfort is beginning to be bypassed in many fleet orders, with 15 fleet executives saying they will opt for manual transmissions, especially in compact and subcompact cars. Air conditioners remain on all cars, regardless of size, according to NAFA.

Mid-range priced cars are becoming more popular, according to NAFA. Sixty-nine percent of new cars in 1982 will be middle, 22 percent top-line cars, 8 percent bottom line, and one percent sports and specialty models.

Thirteen Canadian fleets operating 3,436 cars participated in the NAFA survey. In 1981 these Canadian companies acquired 1,484 cars; in 1982 they plan to increase that to 1,567 new cars.

These new cars, according to NAFA, include 15 percent subcompacts, 28 percent compacts, 56 percent midsize and one percent large fleet cars.

Sixty-five percent will be middle-line models, 26 percent top-line, 8 percent bottom-line and one percent sports cars.

Seventy percent of the Canadian new-car orders in 1982 will be four-door sedans and five-door hatchbacks, NAFA says.

According to Gelco Fleet & Management Service Co. (GF&MS), Eden Prairie, Minn., the 1982-model year also marks the beginning of automotive changes that could have a "devastating effect on corporate fleet managers unless they are prepared to evaluate current market conditions and incorporate new strategies into their planning processes."

GF&MS publishes an annual fleet guide that not only compares new cars of the major manufacturers, but also examines a set of current market conditions that, in combination, has an impact on the traditional corporate fleet management program.

Among the conditions are continually rising fuel prices, an accelerated new-vehicle introduction program, and escalating maintenance costs.

In dealing with these conditions, Gelco recommends fleet managers incorporate the following into their vehicle management programs for 1982:

• An intelligent fuel monitoring capability. Switching to more fuel-efficient vehicles is only part of the solution to rising fuel-cost problems. Gelco says fleet managers must have systems in place to accurately track and monitor the cost of fuel.

• A comprehensive maintenance program. The emergence of self-service stations has reduced regular maintenance activity. Gelco contends it is imperative that fleet managers develop a system to provide regular car care and assure maximum resale value.

• An intelligent new-car selection plan. With manufacturers introducing totally new vehicles every six months, fleet managers must be aware of features that will offer high performance and low depreciation. Gelco notes that front-wheel drive, cruise control, four-cylinder engines and compact size will be important features throughout the decade.

• Reexamination of used-vehicle disposal methods. Gelco notes that today's fleet vehicle is capitalized at approximately $7,600. To retain car value and justify operating expenses (in light of more frequent new-car introductions), fleet managers must reevaluate used - vehicle channels to avoid excessive depreciation losses.

Tire makers expect turnaround

"We're not out of the woods, because of the continued slump in new automobile sales. But we can now see light at the end of the tunnel and, for once, the light isn't an oncoming train," says Donald G. Brotzman, president of the Rubber Manufacturers Assn., Washington, D.C.

"RMA statistical people, having consulted with industry experts, tell me nearly all sectors of the rubber industry are expected to improve in coming months and years, provided there is progress in Detroit," he adds.

RMA's tire forecast shows total shipments of 166.2 million passenger-car tires in 1981, rising to 177 million in 1982 and 183.3 million in 1983.

That's slightly above the expectations of the industry's biggest company, Goodyear. A company spokesman says, "After skidding to the lowest level in more than a decade, tire industry sales at both original equipment and replacement turned around in 1981 and are expected to show considerable increases in 1982.

"The total auto tire market in 1981 is expected to reach 160.8 million units, up about 1 percent. Next year, the overall market is expected to rise 7 percent to 172 million tires."

At the original equipment level, since record year 1977 when the industry supplied 58.1 million auto tires to car makers, sales skidded annually to the low in 1980 of 36.8 million units. This year, Goodyear says, sales are expected to total 37.5 million with next year's total climbing to 42.0 million, up 12 percent.

The replacement industry bottomed in 1980 at 122.4 million units, down from the record 148.8 million in 1978, according to Goodyear, which expects 1.3 percent increase in 1981 and another "nearly 5 percent increase" in 1982.

"People who are putting off purchases of new cars are still continuing to drive their old cars," says Brotzman. "As a result the replacement tire market is stronger than a year ago. The soft spot is original equipment sales and we hope they'll firm up soon."

In the industrial products sector, U. S. demand for industrial hose, flat belts and V-belts is expected to increase 18 percent over the next five years. Sales for 1981 were estimated to be 12 percent over 1980.

In molded, extruded and lathe-cut rubber products, the outlook shows improvement after a dip in 1978. "Our statisticians now estimate a total U.S. production in these lines at $2.09 billion dollars in 1981 and $2.2 billion dollars in 1982," says Brotzman.

On the labor relations front, the overriding issue is the impending negotiations affecting most major rubber companies next year. Contracts with the major tire companies expire April 20.

"I don't believe anyone in our industry expects this to be an easy round of negotiations," says Brotzman.

The Rubber Manufacturers Assn.'s Industrial Products Division expects an upswing in all products next year through 1986. Its market forecast is prepared in cooperation with over 80 companies.

Totals for each product represent U. S. demand including domestic shipments less exports, plus imports. Figures are in millions of dollars, and are at a fixed level in constant dollars, at the value of the dollar in 1981. Figures for 1980 are reflected in 1980 dollars.

The products covered in the forecast are: All reinforced hose, rubber or plastic, except garden hose; all conveyor, elevator and flat transmission belting of rubber or plastic; all power transmission belts, including industrial and automotive other than flat, of rubber or plastic, including belts made for original equipment and replacement.

	1981	1982	1983	1984	1985	1986
Hose	$970	$1,025	$1,055	$1,085	$1,120	$1,150
Flat Belting	320	330	340	350	355	365
V-Belts	405	430	455	465	475	485

U. S. Tire Market Forecast

1981 - 1983 (millions of units)

	1981	1982	1983

Grand Total Mechanical Molded, Extruded & Lathe Cut Goods	$1,846	$2,090	$2,200

Forecast by the Statistical Committee, Molded & Extruded Products Division, RMA.

Where the action is

Aftermarketers project solid growth in '82

By Marc Stern
Staff Correspondent

If there is one part of the automotive business that is optimistic about 1982, it's the aftermarket.

Faced with the same problems that have rocked the rest of the industry — high interest rates and cost pressures — aftermarketers are projecting a growth of 10 to 15 percent for 1982.

The reason is obvious, according to Alan Barron, owner of St. Louis-based Midwest Foreign Imports: "People are putting off working on their cars and we're looking for a real good spring. You see, you can only drive cars so long before they go."

He bases that observation on a traditional market trend which hasn't been seen so far this season — the rush for antifreeze: "Most parts places haven't had the usual run on anti-freeze and we've already had a couple of mornings below 20. So it's got to break."

He also notes this neglect will prove costly for car owners. Instead of protecting their cars with routine service that would cost only $30 to $40, owners who neglect that work may face repair bills of several hundred dollars because of potential damage to their cars' cooling systems or engines.

Until the market breaks, though, Barron's guiding policy is remaining "as liquid as possible." He is cutting back inventories and stressing smaller orders and more limited parts stocks.

• Even more optimistic than Barron is Fran LaBrecque, president of the ADAP automotive chain in Avon, Mass. He predicts a 40 percent growth in 1982 for his New England chain. "ADAP will become a marketer, but we'll be a retailer first," he says.

Although optimistic on ADAP's outlook, LeBrecque notes 1982 will be a "generally conservative year in the parts business, with liquidity the name of the game." He also believes the parts business must become more sophisticated out of necessity. "Four years ago, it was all profit. Today it's cash flow. People are cutting inventory and cutting back," he says.

Because of the high cost of money, LaBrecque says it is prohibitive to keep large inventories of slow-moving items, and jobbers, warehouse/distributors and retailers must become selective in stocking requirements.

LaBrecque is practicing what he preaches. On fast-movers such as tune-up kits, oil filters and oil, he is keeping inventory up because of the "high turn" rate off shelves and the cash flow it generates.

"Our slow-movers are gone. When capital was cheaper, you could stock a lot of stuff, but now that's changed," says LeBrecque.

He predicts that because of this trend, some parts will become scarcer as fewer are ordered by the aftermarket.

Also forcing sharper business practices by parts dealers is a move away from "dating" on bills by parts manufacturers.

With this system, a parts dealer could order a six-month supply with a minimum of nine months to pay (six months, plus three more for final payment).

Those days are gone. Parts manufacturers, for the most part, now require payment in 60 days, which is putting a strain on some dealers and requiring a change in business practices.

Ken Griesman, director of marketing for Beck-Arnley, an import-auto parts supplier, projects 15 percent growth in 1982. He agrees a potential parts boom is in the offing.

"We have excellent sales of bearings and gaskets," says Griesman, who expects many import-car owners will continue to repair their aging vehicles. "Like the old Beetles, they'll get repaired and repaired," he says.

Harry Holzwasser, president of auto parts remanufacturer Arrow Automotive, Framingham, Mass., expects an "up situation" for the remanufacturing segment of the aftermarket.

Says Holzwasser: "I think most of the reason, to use a Lee Iacocca term, is 'sticker shock.' As a result, more people are refraining from buying new cars, and the median age of the U. S. automotive fleet is rising. These cars have to be candidates for repair."

"The future for remanufacturing is brighter than the rest of the aftermarket," he says. "The cost factor of new parts versus remanufactured parts is a great part of the picture. Remanufacturing offers potential savings of 30 to 65 percent over new parts."

Holzwasser expects a shakeout in the overall aftermarket: "Companies with good financial strength and good management are in position to take advantage of future growth. Companies that are undercapitalized or need short-term borrowing are in trouble because of high interest rates."

Entrance by Ford Motor Co. (Motorcraft) and General Motors (AC-Delco) into the mass merchandising - warehouse/distributor-jobber and retail market is observed with interest by ADAP's LaBrecque, who calls it "a radical departure." LaBrecque notes they are concentrating on the "100 or 120 quickest-moving parts, rather than a full line of 9,000 parts numbers."

According to Motorcraft national sales manager Robert Edwards, "1981 was a pretty good year for us, 115 percent of 1980. It was only a little growth, but we're pleased with it." He expects growth in 1982 to be about the same.

Why did Motorcraft enter the "blister-pack" parts market? "It all relates to the do-it-yourself market. There has been an explosion over the last five years," Edwards says.

Plainly, Motorcraft wants a piece of the $40 billion aftermarket. "We use the warehouse/distributor to jobber system, and 35 percent of his business (the jobber's) is retail," says Edwards. "In the old jobber store, the counter was up front; now it's at the back and he has display products up. It's created a demand for a retail type package.

"To be competitive, we repackaged into attractive boxes and went to four-, six- and eight-plug boxes."

Another trend in the retail aftermarket is the emergence of part-store chains, such as CarQuest or ADAP (formerly American Discount Auto Parts).

Jobbers, needing marketing help have turned to these chains, as the trend moves away from independent jobbers.

This has created two major channels of distribution: One is the traditional route through warehouse/distributor to auto dealer market; the other is from the warehouse/distributor to the retail market.

Motorcraft is involved in both channels, and Edwards says there are now only two "full-line parts suppliers in the business, Motorcraft and AC-Delco."

"An advantage of doing business with a company like Ford is that, instead of dealing with many lines and different systems, the parts dealer only has to work with one system," Edwards says.

J. Robert Smith, general director of AC-Delco, agrees with Edwards. In fact, GM reorganized AC-Delco to take advantage of the changing market conditions, becoming an independent subsidiary.

The potential of the $40 billion aftermarket "speaks to our reorganization effort," Smith says. "We wanted to put more emphasis on the traditional (channels of distribution), plus go after the oil company-tire company mass market. We wanted to fine tune the marketing effort for warehouse-distributors, but also wanted to make parts available to the broadest possible spectrum."

Delco was reorganized to put more people at the field level to better service warehouse-distributors. "We wanted to make GM aftermarket parts available to the GM owner on the widest possible basis, and provide the very best service we possibly can," Smith says.

AC-Delco, in conservatively assessing potential aftermarket growth, compares it to the Gross National Product. It estimates real aftermarket growth in the two percent range for 1982. However, with inflation factored in it comes to about 14 percent growth, which is in line with other predictions.

AC-Delco believes that increasing technology used in cars, such as electronics, new engines and front - wheel - drive, will prompt people who traditionally did their own service work to take their cars to service technicians.

Demographics also figure in the service picture. As the 18 to 34-year-old segment of the population declines in the next 10 years, there will be fewer do-it-yourselfers, with a corresponding increase in demand for service technicians and their services.

For now, though, aftermarketers are taking advantage of the do-it-yourself market while preparing for future changes.

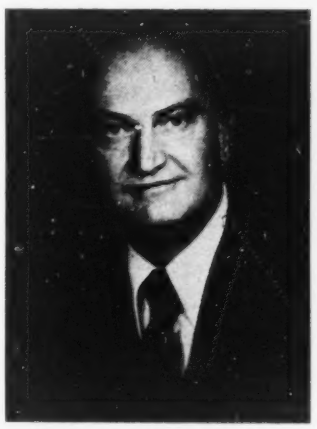
From the retailer's standpoint, this is a welcome change, according to LaBrecque, whose ADAP stores can offer "genuine parts instead of having to try and obtain them by other means."

With Chevrolet's recent departure from the warehouse/distributor market, there opens a potential market for parts manufacturers, and gives jobber-retailers and warehouse/distributors greater access to parts. "They can even have their own store brand labels put on," LaBrecque says.

All in all, the 1982 aftermarket should experience modest growth and spirited competition.

"It will be interesting watching the market in the next 24 months," LeBrecque says.

Holzwasser expects shakeout.



Smith sparks AC-Delco.

Griesman sees potential parts boom.

The global automotive aftermarket will surpass $65 billion (constant 1975 dollars) in 1995, up from $32 billion in 1979, according to Predicasts Inc., Cleveland-based business information and market research firm.

Predicasts economists anticipate design developments which will require more complex, higher priced replacement components. These and an increasing penetration of electrical and electronic equipment will provide the major impetus to aftermarket sales growth through the 1990s.

As examples, Predicasts cites the gradual introduction of electric vehicles using a different caliber of battery; advances in electronic ignition systems, sophisticated control devices and fuel injection; and increases in entertainment and comfort accessories. These factors will offset the slackening per-vehicle sales, a result of increased part durability and slowed auto registration levels.

Market shares of major aftermarket components will remain fairly stable. Accessory sales' percentage of the total aftermarket will increase slightly as per capita income expands, particularly in developing countries. Tire sales' market share, however, will decline as longer-life radials find increasing acceptance.

Developed countries will continue to dominate world sales, accounting for four-fifths of the global aftermarket in 1995. U. S. sales alone will represent 33 percent of the world total at that time.

However, Eastern Europe — particularly the U.S.S.R. — will have the fastest growing aftermarket. In this region, consumer demand for automobiles is just beginning to be recognized and, due to a time lag in technology, replacement rates tend to be higher.

Most types lose favor; pop-ups gain

'81 buyers not sold on fancy roofs

By Joseph Bohn
Marketing Editor

What's on top no longer seems to matter to most car buyers. At least, they're not willing to spend the extra money to get a fancy roof for their cars, an AUTOMOTIVE NEWS survey reveals.

Vinyl tops, manual sliding and electric sliding sunroofs continued to lose penetration on '81 models, the survey showed.

There appears to be some future for pop-up sunroofs and T-roofs, however, as specialty items for some cars, but at this point their market share is still too small to tell.

All in all, the optional roofs don't appear to be one of the car buyers' greatest concerns.

Industrywide, only 22.74 percent, or 1,536,791 domestically built cars, came equipped with vinyl roofs in the '81 model year. That was off from 24.03 percent or 1,717,050 on '80 models.

At one time, vinyl roofs went on over 40 percent of domestic cars, but their popularity is shrinking in proportion to that of the full-sized-car market.

Manual sliding roofs continue to be offered only by Volkswagen, where they accounted for 19.80 percent of domestically built '81 Rabbits, or 35,649 units in total.

That was off from 46,886, or 21.00 percent in '80.

Electric sliding sunroofs were down to a scant 1.11 percent of industry output, equal to 74,824 units.

That was off from 1.24 percent, or 88,649 in '80.

Pop-up sunroofs appear to be a coming item, but the numbers are still very small.

They accounted for 2.46 percent of industry production, equal to 166,017 units, in the '81 model year. That was up from 1.86 percent or 132,703 in '80.

Best suited to small, sporty cars, pop-up sunroofs accounted for 36,640 AMC models, or 26.72 percent of the company total.

That was up from 5,103 or 2.58 percent in '80.

Chrysler installed them in 11,345 cars, equal to 1.55 percent of '81 output. That was up slightly from 10,034, or 1.31 percent in '80.

Ford Motor installed the item in 6.35 percent of its '81 cars, equal to 95,436 units. That was up from 5.05 percent, or 69,325 units in '80.

At Ford, the pop-up sunroof proved extremely popular on EXP, Capri and LN7, where its installation rate was between 20 and 30 percent.

At General Motors, the new Cimarron, scoring a 29.00 percent installation rate, gave a boost to pop-up roofs.

Overall, GM installed the item in only 0.54 percent of its cars, however, equal to 22,586 units. That was off from 48,241, or 1.05 percent in '80.

Volkswagen doesn't offer a pop-up roof.

T-roofs continued to gain popularity on selected models, particularly boosted by Corvette, where it is standard.

Industrywide, some 151,963 T-roofs were installed last year, accounting for 2.25 percent of production. That was up from 1.71 percent or 121,987 in the '80 model year.

Connecticut Chevy unit elects Micki Dworin

EAST HARTFORD, Conn. — Micki Dworin has been elected president of the Connecticut Chevrolet Dealers Assn. She is the first woman president to be elected by a Chevrolet dealer association.

Mrs. Dworin and her husband, Hy, operate Dworin Chevrolet here.

*Includes SX-4.

Note: Figures are generally based on U.S. production. However, Canadian-only sourced cars, such as Cordoba/Mirada, are included in some instances; also, some '82-only models, such as EXP/LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,513 Chrysler models, 137,125 AMC and 179,635 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,673,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouths and 311,988 Dodges.

Autofest draws crowds

Downtown Lowell, Mass., became an outdoor auto show in October as the second local Autofest brought together customers and members of the Greater Lowell Auto Dealers. Highlighting the festivities was the drawing for a "mystery" car sold at cost to a local club which in turn raffled it off for a $5,000 profit.

October Autofest a part of Lowell's rejuvenation

LOWELL, Mass.—What began as an experiment to try and boost sagging automobile sales here in October of 1980 appears to have become an annual event that has captured the interest of thousands.

"We definitely will do it again next year," said Jim Witt, president of the Greater-Lowell Automobile Dealers, as this year's October Autofest closed with the drawing of the winning name for a "mystery" car by Massachusetts Gov. Ed King.

For the second year in a row, more than 16,000 people attended the mid-October downtown Lowell celebration that gave visitors an opportunity to view 1982 model cars displayed by every dealer in the area.

Witt said the show has become a real community event. It has helped humanize dealers and has given them a new image as representatives of an industry interested in the region and the people who live here, he said.

"We couldn't be more pleased with the help we received from City of Lowell officials, from downtown businessmen, the newspaper and the community at large," he said.

"There is something unique going on here and we are very proud to be part of it," said Witt, whose dealership handles Pontiac, GMC, AMC and Jeep.

Free entertainment, balloons, rides for youngsters and fine weather all combined to create a great deal of enthusiasm and support for the project. Downtown business people also cooperated.

The Lowell Sun, a 50,000-circulation daily newspaper serving northeastern Massachusetts and southern New Hampshire, promoted the show with a special auto section and news coverage.

Lowell currently is undergoing a physical revitalization and local dealers are seeking to make the Autofest an annual drawing card.

A highlight of the show was the drawing for a new "mystery" car, which remains so until it is revealed to the winner. All dealers lined up their compact cars with signs teasing, "Is this the mystery car?"

The actual car was selected by putting names of all the dealers in a hat and having the name drawn by a spectator just before a winner's name is selected.

The car raffle was conducted by the Friends of Lowell High School, a 600-member group that supports academic and athletic projects at the city's 3,000-student high school. Dealers sold the group a compact car at cost, and the Friends charged $2 each for raffle tickets.

This year, more than $5,000 was added to the school's scholarship fund as a result of the raffle.

Production costs said to be three times normal

Mexico fights high domestic-car bill

By Diego Lopez
Staff Correspondent

SAN JUAN DEL RIÒ, Mexico. — A Mexican - built automobile costs up to three times as much as a similar car manufactured in any other nation as a result of the failure of the price liberation policy implemented 21 years ago by the federal government.

The estimate came from a federal official, speaking at the Third National Auto Makers Meeting at Mansion Galindo, Queretaro, in November.

At the close of the meeting, President Jose Lopez Portillo told 300 parts manufacturers that unexpected external factors had forced the industry to make strong readjustments.

"But our position must be," he said, "to rely on careful planning rather than suffer from improvisation."

The president said gains must be consolidated and control must not be lost when problems arise.

Members of the cabinet also attended the meeting.

Undersecretary for Finance Jesus Silva Herzog said the Mexican auto industry is not competitive with the rest of the world. This is reflected by its inability to export vehicles, he said.

He said the 1980 auto trade deficit totaled $1.4 billion.

• "Price liberation for automobiles failed to provide expected results," he said. "Prices have soared to the point where a vehicle made in Mexico costs up to three times more than other auto-making nations such as Japan, the U. S. and various European countries," he said.

Silva Herzog noted production shortages in Mexican-made parts for cars and other vehicles raise prices even higher. He said the 60-percent domestic content requirement has not been met. The result is higher costs, caused by high import taxes on imported parts.

Vehicle imports in Mexico were halted by the federal government at the end of 1959. Prior to that time, imported cars were sold here at almost the same prices as in their countries of origin.

The recent government measures which halted imports of deluxe accessories lowered the quality of Mexican-made vehicles and pushed them another step from eventual export, according to one study.

Industrial Development Secretary Jose Andres de Oteyza said Mexico must manufacture cars for export rather than merely supply the domestic market.

He said that standardization of components is plausible. Efforts are being made so the auto industry can place its orders 12 months in advance, he said.

Calling portions of the industry "pockets of inefficiency," Oteyza pointed out that compact four and six-cylinder models should go into production by 1985 to keep within the limits of the National Energy Program.

He praised auto makers for the plants under construction which will begin production late this year. He said added production will reduce the import deficit by at least $400 million.

New trimmings for '82 Subarus

Subaru's 1982 line of front-drive hatchback models has new front styling and a number of other refinements. GL-trimmed versions have new dual rectangular headlights, a new dashboard, tilt steering wheel and a standard Hill Holder clutch with manual transmission.

1982 models bow with lighter maintenance schedules

Subaru gets facelift, equipment

Redesigned front ends, more standard equipment and easier maintenance highlight the 1982 Subaru line of front-wheel-drive and four-wheel-drive vehicles.

The '82 Subaru line consists of front-drive sedans, hatchbacks, hardtops and wagons, and four - wheel - drive hatchbacks, wagons and BRATs.

All 1982 Subarus have a new front-end design with new grille. The BRAT and highline GL and GLF models sport new dual rectangular halogen headlights. Others have single rectangular lights, except for the price-leader hatchback model, which retains round headlamps.

All manual transmission-equipped Subarus for '82 have a maintenance-free battery. Subaru has also extended the oil-change interval for all models to 7,500 miles. Spark plug and air-filter replacement isn't required until 30,000 miles.

Depending on the model, new Subaru options for '82 include a locking fuel-filler door, high-output stereo system, cruise control, power windows and power steering.

All '82 Subarus (except hatchbacks) have new, larger fuel tanks. Among the standard items that are new on highline Subaru models is a tilt steering wheel, new dashboard instrumentation and adjustable lumbar support for the driver's seat.

Subaru's Hill Holder device is now standard with manual transmission on all four-wheel-drive models, GLF and GL front-drive models and the DL wagon.

A new key system—actually three keys—is standard on all 1982 Subaru models. The master key works every lock in the car. A smaller second key works every lock also and is intended as a spare. The third key works only the doors and ignition and does not give access to the trunk or glovebox.

Standard and DL hatchback, DL sedan and DL hardtop models are equipped with a 1.6-liter horizontally-opposed four-cylinder engine. Other models are powered by a 1.8-liter horizontally-opposed four-cylinder engine.

Four-wheel-drive models and the standard price-leader hatchback model have four-speed transmissions, while other Subaru models are equipped with either a five-speed manual overdrive or a three-speed automatic transmission.

November total lowest for month since 1959

Sales continue downward trend

By Jenny L. King
Staff Writer

The new-car sales picture in November was as bad as many had predicted it would be, and there is no reason to think things will improve in December.

The domestic industry was down from its year-ago sales level as well as from October's meager total, and imports were down as well, though they increased their share of the total November market.

Domestic sales dropped 18.43 percent, to 431,726 from 529,288 in 1980, marking their worst November since 1959 when sales numbered 374,287. Back in 1972, the U. S. auto makers put together a remarkable 890,795 record high. The past month's sales were down 12.09 percent from the 491,107 reported in October.

Import sales of 152,939 were down 9.19 percent from 168,410 last year, but they comprised 26.16 percent of the total market, up from 24.13 a year earlier. Imports were strong in a season traditionally good for the domestics with their new models.

Domestic year-to-date figures slipped farther behind 1980: 5,848,710 vs. 6,106,832, a difference of 4.23 percent. Import sales for the 11 months numbered 2,159,901, down 2.56 percent from 2,216,611. Combined sales were down 3.67 percent, to 8,008,611 from 8,313,443.

• All the major domestic manufacturers dropped in November, from 13.06 percent for Volkswagen of America to 30.33 percent for American Motors. VWoA sold 9,423 U. S.-built Rabbits during the month, down from 10,838, while AMC tallied 9,448 sales this year compared with 13,561 in 1980.

Chrysler Corp.'s total of 45,011 was down 14.65 percent from 52,740 last year. Ford Motor Co. sales totaled 97,646, down 20.20 percent from 122,356. General Motors was down 18.07 percent, to 270,198 from 329,793.

GM earned 62.58 percent of the domestic market in November, up from 62.31 percent. Ford slipped to 22.62 percent from 23.12 percent. Chrysler increased its share to 10.43 percent from 9.96 percent. AMC dropped to 2.19 percent from 2.56 percent, and VWoA edged up to 2.18 percent from 2.05 percent.

Of the 14 U. S. makes, only two—two luxury makes—were up for the month. Lincoln sales climbed 7.10 percent over 1980 and Cadillac was ahead by 2.60 percent. Chysler's luxury counterpart, Imperial, suffered the greatest decline of all makes, its sales down 65.94 percent.

Also down were: Chrysler, off 31.16 percent; Plymouth, off 8.08 percent; Dodge, off 10.09 percent; Ford, off 24.12 percent, and Mercury, off 14.21 percent.

Chevrolet was down 20.75 percent, Buick was down 16.64 percent, Oldsmobile was down 9.97 percent and Pontiac was down 30.96 percent. VWoA dropped 13.06 percent and AMC was down 30.33 percent.

• The import sales total included good news for many of the European firms and sober results for the major Japanese auto makers. Import leader Toyota was down 1.47 percent from 1980, second-place Datsun was down 8.26 percent and Honda plunged 30.82 percent in November. Subaru sales were up a modest 3.21 percent, and Mitsubishi products, marketed by Chrysler Corp. dealers, all enjoyed sales increases during the month.

Audi sales climbed 36.57 percent over last year, Mercedes-Benz was up 30.82 percent, Peugeot was up 23.91 percent while setting a record for the month (1,078), Volvo was up 2.86 percent and Saab was up 37.91 percent. VW dropped 34.69 percent in its import sales.

Imports again earned the largest section of the monthly market, with 26.16 percent. U. S. compacts had 20.33 percent, intermediates were next at 19.44 percent, subcompacts had 17.20 percent, standard-size units were 11.04 percent and luxury models had 5.83 percent.

A year earlier the market class breakdown featured: Imports, 24.13 percent; intermediates, 22.26 percent; compacts, 22.20 percent; subcompacts, 15.42 percent; standards, 10.84 percent and luxuries, 5.15 percent.

• Of the domestics alone, 23.29 percent of November sales were subcompacts, 27.53 percent were compacts, 26.33 percent were intermediates, 14.96 percent were standards and 7.89 percent were luxuries.

Top-selling U. S. nameplates in November were headed by Chevrolet Citation, which had sales of 28,553. Second was Ford Escort at 22,147, then Chevrolet Chevette at 19,672, standard Chevrolet at 18,549 and Buick Skylark at 17,425.

Third-period domestic sales dropped 6.07 percent from 1980 as four of the five auto makers reported declines. GM fared best with a 1.21-percent drop. Ford was down 14.46 percent, Chrysler slipped 17.43 percent and VWoA was down 2.56 percent. Estimated sales for AMC were 2,700, identical to the year-ago figure.

Where Auto Market was in November

*—AMC does not have a nameplate breakout for 10-day periods.

AWC establishes regional facility

LOS ANGELES. — American Warranty Corp. (AWC) has opened a regional facility in Ft. Lauderdale, Fla.

The regional office will provide AWC dealers and consumers with a complete sales claims and underwriting facility. It will serve most states east of the Mississippi.

Ed Buck, AWC vice president for data center operations, said, "With the opening of this center in Ft. Lauderdale and our scheduled plans for facilities in Denver, Minneapolis/St. Paul and Dallas/Ft. Worth, American Warranty will be able to make certain that our individual contract holder's records are computerized quickly and that our company will be in a position to respond to the needs of our clientele rapidly."

Down from 6.4 million last year; November total lowest since 1970

1981 auto output to be 6.3 million

By Patricia Hoffman
Staff Writer

Domestic auto production in November was the lowest for the month since the General Motors strike in 1970, and the total dropped 26.06 percent below the comparable 1980 period.

In November, the makers assembled 415,802 cars, down substantially from 562,380 in the same month last year. The 1970 figure was 372,561.

A continuing sales slump has dragged car production steadily downward during the fourth quarter. The makers have forecast only 352,293 units for December, a drop of 25.64 percent from 473,764 in the comparable 1980 month.

The auto manufacturers are looking at 1,361,553 units for the last three months of 1981, down 20.43 percent from 1,711,145 a year ago. This would bring the final build for 1981 to an estimated 6.3 million units, down from 6,416,885 in 1980.

Breakdown for November by company is: General Motors, 69.45 percent; Ford Motor, 17.02 percent; Chrysler Corp., 10.23 percent; Volkswagen of America, 1.95 percent; American Motors, 1.26 percent, and Checker Motors, 0.09 percent.

Last week the auto makers targeted production at 101,265 units, up 14.94 percent from 88,100 in the previous week but down 33.30 percent from 151,812 in the comparable 1980 week.

Chrysler's Jefferson assembly point returned last week after being closed since Nov. 30 for inventory control.

AMC resumed operations last week after two weeks of down-

So far this year, the makers have assembled 6,111,683 cars, up a fraction from 6,077,864 in the comparable 1980 period.

time for inventory adjustments. Also back was VWoA's Westmoreland facility, which had been down since Nov. 16.

GM closed the Leeds assembly point last week for the holiday vacation and to convert to the J-car. The plant is slated to return Jan. 11.

Also idle early for the holidays is GM's Lordstown plant which closed Nov. 25. It is slated to return Jan. 4.

GM's Janesville facility remains down for a five-month changeover to the J-car. The plant closed Oct. 19.

Checker's Kalamazoo facility went down Nov. 18, and no date has been given for the resumption of operations.

There will be eight Ford assembly points idle this week for inventory control. They are: Lorain, Kansas City, Chicago, Dearborn, Wayne, Metuchen, Wixom and San Jose.

Car output in Canada sinks to 17-year low

Canadian auto production in November was the lowest for the month in 17 years, and the total was 17.80 percent below the comparable 1980 month.

The auto makers completed 65,983 units last month, down from 80,272 in the same month in 1980, and the lowest output for November since 50,221 in 1964.

Truck production for the month totaled 42,638 units, down 7.14 percent from 45,916 in the comparable 1980 month, and the lowest November output since 1975 when the makers finished 36,504 units.

The return of American Motors' Brampton facility last week helped boost estimated auto production 13.50 percent to 15,559 units from 13,708 in the previous week, but the total was down a fraction from 15,611 in the comparable 1980 week.

So far this year, the car makers have completed 771,217 units, down 4.41 percent from 806,798 in the same period last year.

Truck production for the week was targeted at 9,430, up 11.51 percent from 8,457 in the previous week, but the total was 28.95 percent below the 13,273 trucks built in the comparable 1980 week.

Production resumed at AMC's Brampton facility last week (Dec. 7) after it was idled Nov. 30 for inventory control.

Also back last week was Ford Motor's Oakville point which closed Nov. 23 to adjust inventories. The facility is slated to go down again today (Dec. 14).

Ford's St. Thomas facility, idle last week, is scheduled to return today with production of the 3-door and 5-door Escort and Lynx added to the EXP and LN7.

Early holiday closings are in effect at International Harvester's Vancouver and Chatham points. The plants closed Dec. 11 and will return Jan. 4.

Also down early for the holidays is General Motors' St. Therese facility. The point closed Nov. 30 and is scheduled to return Jan. 11.

Ford's Ontario truck point, idle since Nov. 30, resumed production last week.

November total lowest since 1970

Truck output dips 30 pct.

U. S. truck production in November was the lowest for the month since 1970 and was 30.85 percent below the comparable 1980 period.

Last month, the makers completed 103,575 units, down from 149,785 in the comparable month last year, and the lowest total for November since 92,449 were assembled in 1970. The 1970 count was held down by a strike against General Motors.

The December forecast for the truck manufacturers is 106,697, down 21.28 percent from 135,545 last year.

For the fourth quarter, output is estimated at 345,763 units, down 23.93 percent from 454,554 in the final three months of 1980.

Despite the expected slump in output for the last quarter of 1981 and the slow start in the first quarter of this year, the manufacturers will build about the same number of trucks this year as last year. The 1981 estimate is 1.6 million, compared with 1,593,489 in 1980. The second and third quarters of 1981 were ahead of 1980.

Last week, the truck makers targeted 24,436 units, up 11.46 percent from 21,923 the previous week, but down 37.09 percent from 38,840 in the comparable week last year.

American Motors' Toledo (Jeep) facility returned last week after being idle for inventory control since Nov. 30.

Also back last week was Volkswagen of America's Westmoreland point which closed Nov. 16 to adjust inventories.

General Motors' Lordstown (van) facility resumed operations last week minus second-shift operations. The plant was idled Nov. 30 for inventory control.

International Harvester's Ft. Wayne and Springfield facilities closed last Friday (Dec. 11) for the holidays. The plants are slated to return Jan. 4.

Ford Motor has scheduled downtime this week at four assembly points. They are: Kansas City, Michigan, San Jose and Kentucky. It is the fourth consecutive week of downtime for all but the Kentucky facility.

A Christmas Fantasy

or, Season's Grittings from Detroit Again

'Twas the night before Christmas, Santa'd just packed his sack
And was thinking of ways he could push the clock back
To the '60s when everyone had plenty of dough
And the cars were REAL cars — Charger and GTO.
Union leaders were nestled all snug in their beds
While visions of buying plants danced in their heads.

Roger B. in his 'kerchief and F. James in his gown
Were dreaming of pushing the workers' pay down.
Hark! In Bloomfield Hills there arose an ovation
For Ronnie's first act—an air-bag deflation.
Interest rates rose with a speed to unnerve
And slashed auto sales like a wild Laffer curve.

Iacocca was worried, that he couldn't disguise;
Chrysler's losses were mounting, despite Old Blue Eyes.
Gerry Meyers saw no quick relief, not one iota,
Without planned obsolescence and a tough import quota.
And Henry the Deuce wore a visage most pained
After Lasky explained and then Henry complained.

Then what to our wondering eyes made its way
But an angular elf in a Japanese sleigh.
He's a jolly young fellow, though there're some
who would knock him,
And we knew in a flash it must be St. Stockman.
He spoke not a word, in his work he was frantic,
Slashed all our budgets, then talked to Atlantic.

Then we all watched with wonder as with Congress he fought
Fiercely, like a Sierra Club member and Watt.
They wrestled and snarled and battled like heck,
Like Volcker and Fraser, like Helen Kahn and Peck.
We sought aid for Detroit, but we here drew a blank.
He shrugged and we thought he said "So sorry, Yank."

Then he lept to his sleigh and they all flew away
Like black ink at GM or like new-model day,
Like cars that were fun and cars that had sex
(Now they're only pale shadows named, A, J, K. X).
But we heard him exclaim as he soared way up there:
"Bundle up now, Detroit—there's a Nip in the air."

—Richard A. Wright

Imported-car stockpile edges up; trucks decline

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. climbed a bit during November, but a brisker sales pace resulted in a 55-day supply Dec. 1, not much changed from the 54-day stockpile on Nov. 1.

The supply of new imported pickup trucks in inventory actually decreased during the month from 94 to 90½ days, although the unit count increased — again, the result of a higher sales rate.

The inventory of new imported vehicles Dec. 1 totaled 349,353 cars and 118,913 trucks. A month earlier, there were 328,674 cars and 105,192 trucks in stock.

The combined car and truck inventory on Dec. 1 was a 61-day supply, up from 60 days a month earlier. So the import stockpile is generally healthy, though a bit heavy in pickups and short in some car lines.

The 55-day supply of imported cars compared very favorably with the swollen 83-day supply of domestic cars on Dec. 1.

• Usually, stocks of new imported cars climb a bit more rapidly at this time of year toward a peak in January. The slower growth this year might be a result of the quota on Japanese imports. Toyota stocks have been very lean for several months.

Toyota did manage to increase its inventory during the month, but opened December with a stockpile that was still very meager at 26 days, up from 22½. Toyota also had a 63-day supply of pickup trucks.

Also carrying very short supplies into December were Honda, with a 31-day supply of cars, and Subaru, with a 34-day supply.

Mazda had a 51-day supply of cars and a 74-day stock of trucks. Nissan and Isuzu each had 65-day supplies of cars. Nissan had a 103-day stock of trucks, while Isuzu had enough for 133 at the November selling rate.

Chrysler Corp. had a 134-day supply of Mitsubishi-built cars and a 120-day stockpile of Mitsubishi pickups.

In addition, Ford had a 73-day supply of Japanese-built Courier pickups and Chevrolet a 122-day stock of LUV pickups on Dec. 1.

All the Japanese nameplates had a 48-day supply of cars on Dec. 1, which was actually down from 52½ days a month earlier. This compared with a 75-day supply of German cars and a 92-day stockpile of cars from other countries.

The West German car inventory was short of Mercedes-Benz, at an estimated 36 days, and BMW, estimated at 40 days. Volkswagen of America had a 74-day supply of Porsches, a 77-day stock of Audis and a 138-day supply of German-built Volkswagens. That compared with a 94-day supply of U. S.-built Rabbits.

Estimated stocks of Swedish cars were healthy — 56½ days for Volvo, 70½ for Saab—while the Italian nameplates were in heavy supply.

Stocks of the DeLorean — which is now the largest selling nameplate in the U. S. from the United Kingdom—were healthy at 54 days.

Metamorphosis

Madison: A kit car from England

Making its debut at the Greater Los Angeles Motor Show, Jan. 2-10, the Madison, a kit car that fits a standard VW Beetle chassis, flaunts itself as a 1930s-style open sports car. It is designed to accept many original VW parts. FOB price for the kit is about $2,600; preassembled model runs $8,600. The manufacturer is GP Concessionaires, Ltd., Isleworth, Middlesex, England.

Some dealers, areas report good times

It's not all gloom in auto business

By Jenny L. King
Staff Writer

Dealers in some regions of the country are reporting good times and increased sales numbers and/or grosses in their domestic new-car figures.

As 1981 quietly closes with U. S. industry sales at a 20-year low, down from a valley created in 1980, an Automotive News survey discovered several pockets of prosperity in the general gloom.

If there is a land of milk and honey in the U. S., it is Texas. Southern California, the Southwest, Chicago and metropolitan New York City also were high on the domestic auto makers' lists of strong sales areas.

Dealers and factory reps credited healthy, growing local economies and sharp dealering with their successes.

Wade Sullivan is a Ford dealer in Crockett, Tex., a town northwest of Houston, situated in Houston County. Sullivan is a member of Ford's National Dealer Council and a local civic leader.

"Houston is a success area. The Sunbelt parts of the country are more blessed right now," said Sullivan, who had just returned from a business trip to Detroit and is aware of the problems faced by many of his colleagues in other states.

"Here in Crockett we've had an outstanding October and November—my own volume isn't up but our grosses are better and we're making money on finance income and insurance," he said.

Sullivan was encouraged about banks getting back into auto financing, though he said his own bank had never pulled out. He said he was surprised to see some banks advertising money for car loans.

"Sales here are consistent," he said. "Dealerships in fringe areas of big cities are doing better than downtown and country outlets."

Sullivan is confident of a good future for the domestic industry. "If things continue in the direction they now are headed, we will compete (successfully) with the imports," he said. "The products coming from Ford are much better than the public perceives."

Sullivan said he and the three

Vacations, COLA affected

Ford to cut benefits for salaried workers

By Marjorie Sorge
and Joseph Bohn

Ford Motor Co. will make more cuts in vacations, cost-of-living adjustments and other benefits for its salaried workers.

The reductions are to reduce the chances of huge layoffs in the salaried workforce, a company spokesman said.

There are presently no plans for further cutbacks in white-collar employment, Donald Petersen, Ford president, said, but he indicated that Ford's employment has not yet been cut to the bone.

"What I hope, as we are looking to the future, is that we can find ways to accomplish what we must accomplish in a continuing and progressive way, in the maximum way possible, as attrition permits," Petersen said.

"We'll get the same job done —we must get the same job done—with fewer people. It doesn't matter what kind of job you're referring to, an engineering job, a manufacturing job, a finance job . . . it is very clear the Japanese get the equivalent job done—I'm talking in salaried areas—with fewer people than does the typical American firm. I'm convinced there's a great deal we can do, and must do, to become competitive."

He said Ford is taking a long look at the Japanese methods and the "goal is to match them in manhours . . . for producing a car."

The new cuts in Ford's salaried benefits come on the heels of a UAW executive board decision to let its bargaining councils begin early negotiations with the auto companies if they see fit. Many labor observers and some salaried personnel feel these reductions are an example to the hourly workers and might be similar to concessions the company would seek at the bargaining table.

UAW President Douglas A. Fraser has said the auto companies must show an equality of sacrifice if they expect any contract concessions from the hourly workers.

• At present, members of the UAW Ford and General Motors bargaining units are polling the membership to get a feel for the rank-and-file position on early bargaining. No formal meetings have been scheduled.

Ford has cut its white-collar employment by 25 percent since June, 1979. The blue-collar employment has dropped from 190,000 in mid-1979 to 115,000 with 48,725 on indefinite layoff.

It has also reduced the number of extra vacation days (the white-collar equivalent of paid personal holidays) from nine to six and has cut vacations by 20 percent for salaried workers.

The new reductions will rescind the 20-percent cuts in vacation days. Every worker now will lose six vacation days.

Other cuts include:

1. Elimination of a compensatory day off this month for white-collar workers to match a provision in the hourly contract.

2. Elimination of COLA payments paid for any time not worked beginning Jan. 1. Payments will now be calculated only on the number of days actually worked in a quarter. Previously, vacations and sick time were included.

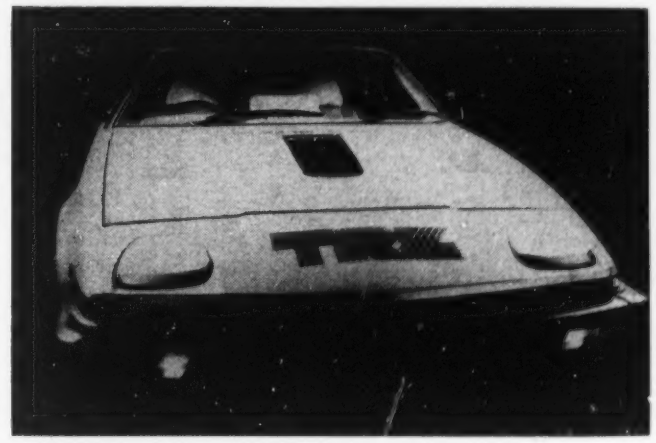
3. Reduction of the amount of overtime paid in 1982. Depending on job description, some workers will have overtime pay eliminated, others will have it limited to straight time pay rather than time-and-a-half while others will keep their overtime benefits.

4. Beginning June 1, salaried employes opting for early retirement will have their life insurance reduced when they retire. Previously the benefit was not reduced until 65 when federal benefits kicked in.

5. First-class air travel has been eliminated except for extended overseas flights.

The cuts will save Ford "millions of dollars," a company spokesman said.

Ford lost $713.8 million for the first nine months this year. It lost $1.5 billion in 1980.



A TR-7 for the price of a pen

A customized Triumph TR-7—valued at $24,000—is top prize in a competition to promote Schaeffer TRZ ball pens in the UK. The car is the work of London's Wood and Pickett, and features velour and Connolly leather trim, keyless locking, radar monitoring device and cruise control.

Chrysler tools up a new rebate program

Tens of millions of ad dollars frozen

By Joseph Bohn
Marketing Editor

Chevrolet, Ford and Oldsmobile have deferred spending tens of millions of advertising dollars — money not cut, but put on hold, pending a break in the market.

Agency people have been told to stay flexible, to wait for some signals of a turnaround; even as escrow ad funds soar to record levels for some agencies.

Yet, General Motors is expected to heavily blitz its new A-body and F-body cars, being introduced in January, and the new Buick and Oldsmobile J-cars to follow.

Chrysler has heavily slashed its ad budget, with reports of a cut as deep as 40 percent at Dodge. And yet the combination of advertising and a new consumer rebate, beginning Jan. 4, may send Chrysler's total first-quarter marketing effort to a record level.

All in all, these sometimes contradictory signals underscore both Detroit's uncertainty and its need to do something to rekindle lifeless sales.

General Motors, the only company with enough clout and leverage to do so, will try mightily to stir things up in the first quarter.

GM will give a lot of promotional play to previously announced price-cut versions of its Chevrolet and Pontiac J and X-cars, as well as the new lines of A-bodies like Celebrity and Cutlass Ciera and F-body Firebird and Camaro.

GM, which has internally projected its days' supply of unsold cars might climb into the high 90-day range by Jan. 1, due to a slowdown in the daily selling rate (absolute volume will be down to a little over 800,000), is also expected to launch dealer cash incentives or similar activity to whittle down unwieldy stocks.

Yet, additional ad money GM might have spent is clearly being deferred at several divisions, with reports of cash reserves at an alltime high.

Chrysler, expecting that GM may stir up the market, hopes to siphon off traffic with yet another rebate. The latest program has a replacement feature. Dealers will be expected to order a new car for every one the factory pays money on.

Details of the program, as outlined to Chrysler's national dealer councils, were still tentative at press time. There were reports, for example, of rebates ranging from $300 to $2,000 across the broad product line, but no confirmation of exact amounts or even an end date to the program.

Chrysler's market share has improved in recent 10-day periods. But a larger share of the currently small market has not helped some dealers, who are still shouldering heavy inventories.

To help conserve cash, Chrysler is no longer giving special wholesale floor-plan rates through Chrysler Credit to dealers who place at least 17 percent of their retail deals with the company's finance arm.

All dealers will be paying 2.00 percentage points over prime rate on wholesale financing through Chrysler Credit.

Ford Motor, disappointed by its last rebate, is still tracking GM closely in order to react competitively to the industry leader's moves.

Like GM, Ford is top-heavy with cars in some lines, and is expected to run a dealer cash incentive to help pare inventories.

Ford may also counter GM, with some specially-price-reduced versions of its cars.

Whether Ford gets into rebates again will depend largely on what GM does.

• GM has been the most rebate-reluctant of the Big Three domestic firms because of the enormous potential costs it faces with 50-plus percent of the market and the big sales increases it needs to make such a program pay.

GM at 50 percent of the market, for example, would have to pick up 5 percentage points to score a 10 percent increase; while small-share marketer Chrysler (10 percent of the market) needs only a 1 percentage point increase for the same kind of gain.

Thus, rebates come more easily, and make more sense, for the smaller company than the larger one.

While rebates have helped Chrysler, they've taken a toll on some dealers who complained that with the time lag in repayment, the program sometimes gives them a short-term negative cash flow.

Most existing car lines to be overhauled

Ford pushes ahead on FWD plans

By Paul Lienert
Contributing Editor

Ford Motor Co., despite recent delays and cancellations in new-model programs at General Motors, is locking up plans to overhaul most of its existing car lines and convert them to front-wheel drive by 1986-87.

Only the Escort/Lynx and EXP/LN7 lines will escape the surgeon's knife at Ford over the next five years, and those subcompact models will be upgraded and fitted with optional turbo and diesel engines in the interim to make them more competitive with new offerings planned by the other domestic and leading import auto makers.

Among Ford's future vehicle programs are the following:

A small front-drive compact line to replace Fairmont/Zephyr in 1983½, based mechanically on Escort. The new FWD compacts reportedly will be called Ford Tempo and Mercury Topaz ("Topaz" was the development code name for the program).

Two-door and four-door models will be offered with four-cylinder engines and four-speed manual transmissions on the base models. Later, diesel and five-speed options will be available.

Facelifts for the Mustang/Capri and Thunderbird/XR-7 lines in mid-1983. T-Bird and XR-7 will be downsized slightly, and both series will get new sheet metal, including sleeker, more aerodynamic skin. The cars remain rear-drive, however, until small front-drive replacements bow in 1986-87.

A brand-new minicar called "Minx," scheduled to be assembled by Toyo Kogyo in Japan and shipped to Ford, beginning in the summer of '84.

The front-drive minicompact also may serve as the base for the '87 Mustang replacement, which could arrive as a two-seater.

A new line of small, front-drive family sedans and luxury cars, now being developed under the code name "Taurus," to replace LTD/Marquis and the Lincoln Continental/Mark VI series in 1986.

The Taurus cars, which are to get four-cylinder engines and four-speed automatic overdrive transaxles, have been delayed by about six months, with the Ford/Mercury cars to be unveiled in late '85 and the new Lincolns in mid-1986.

Taurus-based replacements for Thunderbird and XR-7 should arrive in late '86.

Choice of gas, diesel and turbo-diesels will be offered in most Taurus models.

Mazda redefines sedans

Mazda Luce (and Cosmo) four-door sedan and coupe have better aerodynamics. Power is by choice of 1.8 or 2-liter gasoline engine, 2.3-liter Wankel or 2.3-liter diesel. These top models from Mazda have independent rear suspension.

Mid-Liner's market is expanded

The Mack Mid-Liner MS200P series of medium diesel trucks now is certified for sale in California. The Mid-Liner, introduced in the 49-state version in 1979, has a turbocharged and aftercooled six-cylinder engine and is built in France by Renault.

'82 California debut set for Class 7 Mid-Liner

ALLENTOWN, Pa. — Mack Trucks, Inc., which has been marketing the Class 6 Mid-Liner MS200 mid-range diesel truck in California since last April, will have a second model certified for sale in that state in 1982.

Richard F. Murphy, Mid-Liner marketing and sales vice president, said the Class 7 MS-300 tractor and platform models will be available in California starting in April.

The trucks, first introduced in the 49 states in 1979, are built to Mack specifications by Renault of France and now are marketed throughout North America through more than 200 Mack branches, dealers and distributors.

The Mid-Liner has been available only through Mack outlets since its introduction in the U. S., but Murphy said the company may consider offering the franchise to non-Mack retailers in 1982.

In 1980, the Mid-Liner's first full year in the North American market, MS200 model sales totaled 1,509 units accounting for 7.4 percent of Class 6 diesel registrations, according to Murphy.

He estimated 1981 sales of the MS200 and Class 7 MS300 models will total about 2,700 units, and noted that the MS200 accounted for 9.1 percent of Class 6 diesel registrations in the first six months of 1981.

"We expect to sell 4,000 of these trucks in 1982 and 4,500 in 1983, but realization of these objectives will depend very much on market conditions," Murphy said.

Currently, the Mid-Liner is available only with a single rear axle, he said, and there are no plans at this time to offer a tandem axle.

"Initially, we concentrated Mid-Liner's marketing efforts on Mack customers who run mid-range diesel vehicles, but with the experience and confidence we've gained, we're selling to a full range of users," he said.

"We're selling to produce operators, beverage haulers, small contractors, retail furniture outlets, municipalities for refuse collection, rental and leasing companies and people in agricultural fields," he said.

The Mid-Liner is equipped with a number of domestic components and parts, and Murphy

truck industry news

But overall truck sales for month, year trail '80 totals

Compacts, vans gain in November

A sharp upturn in sales of compact pickup trucks, sparked by a fast start for the new General Motors domestic entries, and continued improvement in van volume highlighted the industry's November sales reports.

But sales of most other light trucks, the mediums and heavies still are hurting, causing the total for both the month and the 11-month period to lag behind the year-earlier figures.

During the month, according to preliminary reports, the nation's franchised dealers and factory outlets retailed 157,385 trucks of all types, a decline of 8.6 percent from last year's 172,258 units.

Through November, the total also was down 8.6 percent, from 2,315,244 a year ago to 2,116,596.

In November, sales of the compact pickups — both imports and domestic units — totaled 39,086, an increase of 34.4 percent over the 29,522 retailed in the same month a year ago.

The 11-month count, however, was off 3.7 percent to 459,477 units, compared with 477,033 in the like period in 1980.

In spite of a steep slump in sales of captive imports during the month, the total number of deliveries of the Japanese-built compacts was 5.4 percent higher than a year ago, 29,255 versus 27,749.

The 11-month count, on the other hand, was down 7.6 percent to 419,173 units, compared with 453,598 through November in 1980.

Sales of the non-captive nameplates — Toyota, Datsun, Mazda and Isuzu — were up 43.4 percent during the month and 12.9 percent for the January-November period.

In November, dealers retailed 20,124 units, compared with 14,038 a year ago. The 11-month count was 267,640, versus 237,151 in 1980.

The captive imports — Ford Courier, Chevrolet LUV, Dodge Ram 50 and Plymouth Arrow — were down 33.4 percent in November, from 13,711 units a year ago to 9,131.

Through November, the total was 151,533, a decline of 30 per-

Datsun extends truck incentive until Jan. 4

Datsun has extended its "Fall Truck Bucks" program, due to end Dec. 31, to Jan. 4, ostensibly because everyone would have been out of the office at the Dec. 31 conclusion of the program.

Datsun employes return Jan. 4 from their holiday shutdown.

Volkswagen of America's program on Porsche 924 turbo and non-turbo models has been helping move some of those models.

VWoA gave dealers $1,000 on non-turbo and $500 on '81 model Turbo 924s in stock as of Nov. 11.

It also threw in an extra $1,000 per vehicle for units retailed, delivered and registered during the Nov. 11 - Jan. 31 period.

There's also a special $1,000 on a maximum of two turbos and two non-turbo (four - car maximum) demonstrator units in stock as of Nov. 11.

IH program weighs 'true ownership cost'

CHICAGO. — A fuel-efficient approach to specifying line-haul truck-tractors has been developed by International Harvester's Truck Group that compares computer projections of fuel savings versus financing charges for new equipment.

Called the "IH Fuel Fighter," the program's objective is to document to high-mileage truck operations how they can actually be losing money by deferring truck - replacement purchases despite current high interest rates.

A key ingredient in the program is the identification of high fuel costs when related to total truck-operating expenses.

According to T. E. Reimers, Truck Group marketing vice president, the program is based on "demonstrating to truck operators what their true 'cost of ownership' is. His initial investment and finance costs are only part of the total life expenses of running a truck.

"For example," he said, "it may cost $362,000 to finance and operate a certain truck over four years, and fuel alone will account for $217,000 or 60 percent of that cost."

Reimers noted that savings of $30,000 per truck over a three-year period are possible with an International "Fuel Fighter" model. The figures he added, are documented by a payback analysis based on the company's Truck Computer Analysis of Performance and Economy (TCAPE).

"The system is programmed to take all fuel-economy factors into account and to indicate the effects of various combinations of engines, transmissions, rear-axle ratios, GVW/GCW, radial versus bias-ply tires, tire size, automatic fan, air deflectors and the new IH rear-cab extenders," he explained.

- Using TCAPE, the amount of fuel to be used per year for an operator's current truck is calculated and predictions are adjusted to the actual use figures. These are compared to adjusted predictions for fuel consumption by a corresponding IH fuel Fighter model. The added financing costs to purchase a new truck are factored in and the differences are compared.

"Most owners are amazed, but this program shows them in 'real-world' figures that it is far less expensive to purchase a new fuel-efficient truck now than to continue running their current model," Reimers said.

The Fuel Fighter program involves four International heavy over-the-road tractor models:

3-year property—light trucks, tractors—now included

C.I.T. expands tax-benefits plan

NEW YORK. — C.I.T. Corp. has expanded its program that enables firms to sell tax benefits derived from the purchase of new capital goods to include equipment that qualifies for depreciation over three years.

Previously, the C.I.T. program, called the Economic Recovery Finance Plan, was available only for property that qualifies for depreciation over five years under the new Accelerated Cost Recovery System (ACRS) of the Economic Recovery Tax Act of 1981.

Three-year property includes light-duty trucks, tractor units for over-the-road use, machinery and equipment for research and development, and other short-lived tangible property as described in guidelines issued by the Internal Revenue Service.

Five-year property includes most other industrial equipment and machinery, according to the IRS.

Under the new tax law, firms that purchase new equipment have three months from the day they put the equipment into service to effect the sale of the investment-tax credit and depreciation associated with the purchase.

Firms that finance three-year equipment through C.I.T. may sell the tax benefits derived from their purchase for 13.2 percent of the equipment's selling price. The price paid for tax benefits sold on five-year equipment financed through C.I.T. is 16.1 percent.

Both prices apply to new-equipment purchases of at least $100,000 made on or before Dec. 31, 1981. The prices are different because the value of the tax benefits is different. The investment-tax credit on three-year equipment, for example, is 6 percent; on five-year equipment, it's 10 percent.

According to C.I.T., the price paid for tax benefits will likely decline after Dec. 31 because companies that purchase tax benefits receive the same amount of depreciation regardless of

Right time for a snowplow driveaway

Ford Division's Boston district sales office picked the ideal time for its largest 4x4 snowplow driveaway ever — two weeks prior to New England's heaviest snowfall in three years, up to 24 inches in many areas. Thirty-five pickups and Broncos were driven by Ford dealers from Boston to the New England Patriots/New York Jets football game in nearby Foxboro. With one of the units is Nat S. Pendleton, right, assistant district sales manager, and Phil H. Fitzgerald, general field manager.

But overall truck sales for month, year trail '80 totals

Compacts, vans gain in November

Continued from Page 14

cent from the 216,447 units retailed in the same period last year.

In the first full month they were on the market, sales of the GM compact S-trucks totaled 7,609 units — 6,769 Chevrolet S-10s and 840 GMC S-15s. The two-month count was 9,256, with Chevrolet dealers accounting for 8,249 units and GMC dealers 1,009.

• A surge in demand for van conversions is a major factor in the increase in sales of these vehicles. In November, 24,442 of these units were sold, an increase of 3.2 percent over the year-earlier 23,686.

The van upturn, however, didn't begin until midway in the second quarter, so the 11-month total was down 5.5 percent, from 326,784 units in 1980 to 308,805.

Ford was the only Big Three van producer reporting a downturn in November. Its sales totaled 9,201 units, off 9.5 percent from the 10,168 retailed in 1980.

Chevrolet's van sales during the month were up 14.8 percent to 8,129 units, compared with 7,080 last year; GMC's were 14.3 percent higher, from 1,286 a year ago to 1,470, and Chrysler's count was up 9.6 percent, from 5,149 to 5,642 units.

Ford and GMC, however, were the only makers reporting an increase in 11-month van sales.

Ford dealers retailed 124,534 units through November, 4.1 percent higher than last year's 119,588, while the GMC total was up 7.3 percent to 21,257 units, compared with 19,816 a year ago.

The Chevrolet count for the 11 months was off 2.8 percent, from 98,003 in 1980 to 95,210. Chrysler sales were off 24.1 percent through November to 67,804 units, compared with 89,377 the previous year.

• Sales were down from a year ago in all three market segments for the 11-month period, with the smallest decline in the light-truck segment.

Through November, 1,903,991 light trucks were retailed, off 7.6 percent from last year's 2,060,878. Mediums were down 19.2 percent, from 90,112 a year ago to 72,801, while the heavies were off 14.9 percent to 139,804, compared with 164,254 last year.

The Motor Vehicle Manufacturers Assn. reported that its members' dealers retailed an estimated 137,000 trucks in November, down 13.2 percent from the 157,859 units sold in the same month a year ago.

The 11-month total was 1,845,384 units, a decline of 11 percent from last year's 2,074,392.

Big Three truck manufacturers reported their dealers retailed 124,414 units during the month, down 12.3 percent from the year-earlier 141,819. The 11-month total of 1,641,739 units was off 11 percent from last year's 1,845,230.

With the strong performance by the S-10, Chevrolet outsold Ford in November, rolling up 53,599 sales. The total was down 0.6 percent from the year-ago 53,898. LUV sales in November, however, dropped 54.1 percent below last year, 2,475 versus 5,388.

Through November, Chevrolet remained in second place in sales with 633,281 units, off 9.5 percent from the year-ago 699,854. The LUV count was off 28.1 percent, from 83,507 units in 1980 to 60,028.

Ford dealers sold 45,756 vehicles during the month, down 24.1 percent from last year's 60,277. The total included 4,859 Couriers, an increase of 5.1 percent over the year-earlier 4,625.

Going into the final month of the year, Ford had a commanding lead with 678,279 sales, a decline of 8 percent from last year's 737,268. Courier sales were down 17.4 percent, from 72,749 a year ago to 60,056.

Chrysler's November sales were off 8.1 percent to 13,233 units, compared with 14,395 in 1980. Ram 50 sales totaled 1,296 units, off 42.9 percent from the year-ago 2,749, while the Arrow count was down 47.2 percent, from 949 to 501.

Through November, Dodge and Chrysler-Plymouth dealers sold 171,329 trucks, off 27.4 percent from the year-ago 235,833. The Ram 50 count dropped 45.3 percent to 23,267 units, compared with 42,554 in 1980. Arrow sales were off 53.6 percent, from 17,637 last year to 8,182.

GMC dealers retailed 11,836 units during the month, a decline of 10.7 percent from the year-earlier 13,249. The 11-month total of 158,850 was down 7.8 percent from last year's 172,275 units.

• Sales of Jeep four-wheel-drive vehicles dropped 16.6 percent in November to 5,139 units, compared with 6,163 a year ago. The 11-month total was down 18.9 percent, 58,639 versus 72,291.

Volkswagen dealers retailed 2,222 Rabbit compact pickups during the month, a gain of 25.3 percent over the previous year's 1,773. Through November, sales were 32.5 percent higher than a year ago, from 23,435 to 31,046 units.

Sales of the medium and light-heavy Mercedes trucks in November were down 27.3 percent, from 361 units in 1980 to 261. The 11-month count was 3,572, a dip of 3.5 percent from last year's 3,701.

Good gains in November were reported by importers of three of the four non-captive compact pickups.

Toyota dealers retailed 9,044 units during the month, 43.3 percent higher than last year's 6,310. Through November, the count was 125,866, an increase of 1.7 percent over the year-earlier 123,769.

During the month, 8,054 Datsuns were sold, up 14.2 percent over last year's 7,053. The 11-month total of 109,260 units was 3.9 percent higher than the 105,172 retailed through November, 1980.

Mazda said its dealers sold 1,594 pickups in November, up 136.1 percent over last year's 675 units. The 11-month count soared to 15,912 units, an increase of 93.8 percent over the year-ago 8,210.

Isuzu dealers retailed 1,432 vehicles during the month, bringing the calendar-year total to 16,602 units. The Isuzu truck was introduced in the U.S. market late in the second quarter.

Israel develops vehicle driven by hydraulic motors

ASHKELON, Israel.—The Lizard, a cross-country vehicle in which each wheel is independently powered by a hydraulic motor, has been unveiled by Ashot Ashkelon Industries.

The Lizard is the first complete vehicle developed by the firm, a maker of automotive components and assemblies.

The vehicle's 47-horsepower engine powers four variable displacement hydraulic pumps, which in turn activate four hydraulic motors, one at each wheel. There is no drive train or transmission. A single hand lever controls forward or reverse.

Each wheel is independently suspended, so there are no axles.

Front and rear sections of the Lizard are joined by a single bearing, to permit lateral pivoting in extremely rough ground.

Developers say the vehicle can climb over obstacles up to 40 inches high.

Versatile plant

Janet Stone loads an automotive rear window onto a roller conveyor to transport it to a tempering furnace at PPG Industries' Evansville (Ind.) plant, the company's only domestic facility that can produce both tempered side and rear windows and laminated windshields.

Runyon sees 5-year deficit for U. S. arm

Nissan says wages will keep its ink red

Continued from Page 9

inishing the workforce.

"If you increase your output in a U. S. plant without adding workers that's called a speedup by the UAW," he said. "In Japan, Nissan had 49,000 employes 10 years ago and they produced 29.2 cars per employe. Now they have 57,000 employes and they produce 49 cars per employe and they call that productivity. They think that's good, and it must be because they're selling the cars."

Runyon also points the finger at the UAW for poor quality, and he has made it clear he does not want the union to organize the Smyrna truck plant. In the past he has said "you won't get the cooperation necessary to build a quality product with the union."

NMMC has consulted labor/management attorneys about how to operate in a union-free environment, Runyon said. One, Gail Kreusch, is the general counsel.

The problem, he said, is the adversarial relationship that exists between the UAW and the auto companies which will not change quickly.

Runyon charged that working with management the way the Japanese unions do is not the UAW way.

"In Japan the unions want the company to be successful because they participate in the profits of that success," he said. "The UAW, on the other hand, is not really interested in that. They are interested in having membership. I think their stated purpose as stated by (UAW President Douglas A.) Fraser is organization and to be influential in the political arena. In Japan, the unions are interested in the social welfare of the workers and the safety of the workers.

"The UAW is interested in making its membership grow, which is what the PPH days do, what the added relief time does and what the 35 hour week does. All those are aimed at increasing membership. Sure, they're good for people, but they aren't good for productivity.

"That's another thing the Japanese people are interested in — productivity — because they know that without productivity they are not going to prosper. All these things are not natural to the UAW. The UAW is an adversarial union. I've worked with the UAW for over 37 years so I know where I come from in that regard."

Runyon was vice president, body and assembly operations, for Ford Motor Co. when he retired in June, 1980. He joined Ford in 1943.

A UAW spokesman said, "with bosses' attitudes like these, the soon-to-be-hired Datsun workers may need more than a union—they may need a squadron of AWACs and a number of concrete bunkers."

Martin Gerber, UAW vice president, organizing, accused Runyon of supporting a prejudiced and warped view. He said Runyon is attempting to brainwash the workers by generating anti-union sentiment years before NMMC reaches full-employment.

The UAW is also very concerned about the social welfare of its membership, he said.

"Shorter work time and a short work week give more jobs," he said. "It's the way to achieve prosperity—through full employment. Our objective is to increase the lifestyle of the American worker."

The UAW has made it clear it will attempt to organize the Nissan facility. The majority of the workers in that plant will not be hired until 1983 so any full-strength organizational attempt probably will not be attempted for some time.

Gerber said he is displeased that there is an adversarial climate so early in the organizing game. He said Runyon is "sounding the clarion call too early in the morning to start the battle."

But, according to an article in the Nashville Tennessean, the UAW will have an uphill battle. That paper recently interviewed hourly workers currently employed at the plant and found they don't seem to be interested in belonging to the UAW. Comments included "We didn't invite them (the union) to the party" and "What can a union do for us that Nissan can't?"

The enthusiasm comes from Nissan's participatory management concept which allows workers to have a say-so in everyday operations. According to Runyon, it is management "from the bottom up rather than from the top down." He said the administrative personnel will not be very involved in running the plant.

Nissan has also eliminated much of the thick middle-management area so prevalent in the U. S. industries. According to Runyon, there are five levels of management — the president, six vice presidents, three plant managers, three operations managers and five or six supervisors.

Of those management people, only five will be Japanese—the vice president for quality assurance, the manager of in-process inspection, the vice president for product design, the manager of chassis design and the manager of supplier quality who checks U. S. products to see if they meet Japanese standards.

Many of the workers will be going to Japan for training in the Nissan way. There are currently 16 maintenance technicians and six maintenance supervisors in Japan. The first technicians go over for nine weeks, come back for four, go back to Japan for 10, then home for four and back again for another 10.

None of the workers are referred to as employes. They are technicians.

The plant built on rock

Nissan Motor Mfg. Co.'s new assembly plant will be partially built on solid rock. The site offers a solid base for the stamping operations. The building will be two-thirds of a mile long and will house three operations—body, frame and stamping; paint, and trim and chassis. There is also a 1.6-mile high-speed test track on the site.

Some dealers, areas report good sales

It's not all gloom in auto business

Continued from Page 1

other dealers in Crockett have formed their own dealer association to promote new-car sales and the industry. They advertise together without using prices. Their goal is to build up the town as an automotive trade center, something Sullivan said he had seen done elsewhere with a large measure of success.

The local friendly competition includes a Chevrolet-Buick outlet, a full-line Chrysler dealer and an Oldsmobile - Pontiac - GMC Truck operation.

Sullivan emphasized both cooperation among dealers and the importance of total involvement on the part of a professional dealer.

"A dealer must be personally involved," he said. "I'm active in a great number of civic organizations. It keeps our name before the public and we are serving the community which is our market."

A Volkswagen of America factory rep in Texas said the state's metropolitan areas enjoy a good balance of business ventures—e.g., banking, oil, shipping, diversified manufacturing —that combine to keep the economy strong.

"Building (the building industry) is fantastic," he said. "San Antonio is growing rapidly; its population now is larger than that of Dallas, yet it has no single major industry, unless it's the military base.

"Families are coming down here in droves. Those looking for jobs need skills or they won't find jobs. But I think the unemployment in Houston is something like 3.5 percent. Jobs go begging there," he said.

Big cars still sell well in the state, said the VW rep. Customers no longer worry about gasoline supplies.

Dallas-Fort Worth is Porsche-Audi's hot sales spot, while VW pinpoints the Sunbelt areas of Texas, Florida, Louisiana and Georgia as its current best locales.

The factory man said VW's floor-plan assistance program and a continuing stream of incentive promotions have helped push sales.

• In sharp contrast to such factory measures is the long-standing total-care philosophy which keeps buyers coming back to the Penske Cadillac in Downey, Calif.

"The way we take care of our customers explains the fact that we are one of the top Cadillac dealers here," said the general sales manager. "We don't forget people after the sale. We follow through on complaints and keep in touch, whether the customer bought a car two years ago or eight."

"The best deal is not always the best price," he said.

The dealership enjoys the loyalty of both customers and staff: The average length of service for sales people is eight years, and service employes have been with the operation as long as 20 years, he said.

According to Cadillac, the New York zone (New York-New Jersey-Connecticut) is its top sales areas, and Zone Manager Joe Fetzer said Manhattan dealer Victor Potamkin is the Number One dealer.

"We work hard, and we work even harder when the going gets tough," Potamkin said, explaining why his sales will be up 80 percent over 1980.

"There are people who make things happen—that's us; and there are people who watch things happen.

"Manhattan is a Cadillac town," he said. "Here, Cadillac outsells Chevrolet, Ford, Plymouth, Datsun, Toyota, and we're looking for a good year in 1982."

Potamkin sold more than 6,000 new Cadillacs in 1980. He said his grosses will be about the same this year, and of the $140 million he takes in, 2 percent, or $2.8 million, will be reinvested in sales through newspaper, TV and radio advertising.

A large piece of Potamkin's business is limousine sales. He sold over 600 in three stretched sizes in 1980, more than half of them to individuals. He said limo customers are seeking the security and increased comfort this type of car offers, and at $35,000, he said, the price is right.

• Another northern region where sales are good is Chicago, an established foothold for Chrysler Corp. products. It's not the Sunbelt. Instead it is a city with a large blue-collar population and that's the market, said Dodge dealer Dick Everman.

Everman has held the reins at Suburban Dodge Sales in Berwyn, Ill., for the past 17 years. He was in high spirits in mid-December. He reported a 30-percent increase in sales this past year, and a $150,000 turnaround in his profit-loss picture —a turnaround for the better.

"I've been around an automobile dealership all my life, and I have never seen a better lineup for dealers to offer than we (Chrysler Corp. dealers) now have," Everman said.

Another plus is the quality of new products. Everman said cars are not coming back to the dealership with problems. "We have to remind people to bring them in for scheduled checks," he said.

"When I first took over the dealership, I cultivated a working relationship with a local bank," he said, citing the availability of credit for the dealership and its customers as pivotal in his success.

"Never has there been a year when it cost more to be in the automobile business," he said.

Everman said he intends to increase his inventory, in the belief that customers do not want to order their new cars from sales books. He paid a compliment to his staff which he said had proven its loyalty by staying with him through times when their earnings haven't gone up as fast as the cost of living.

Dealer success stories are being penned elsewhere, as well, but they have the common themes of planning and perseverence, plus confidence in their products and the future of the domestic industry.

NHTSA's First Family awarded membership

NHTSA Administrator Raymond Peck, center, with his daughter, Sara, and wife, Debbie, were awarded membership in the American Seat Belt Council's Saved by the Belt Club, represented by ASBC President Charles H. Pulley. The Peck family was involved in a serious auto accident on the Chesapeake Bay Bridge in Maryland last spring, but escaped with minor injuries. The adults were wearing seat belts, and Sara was in a child restraint when their car was hit from behind.

Edgar F. Kaiser, 73, dies; builder of cars and Jeeps

SAN FRANCISCO. — Edgar F. Kaiser, described as the "international architect" who guided the expansion and diversification of Kaiser enterprises on a global basis, died here Dec. 11 after a long illness. He was 73.

He had been an executive of the Kaiser-Frazer firms that built the Kaiser car from 1946 to 1951, the Frazer from 1946 to 1954 and the Henry J from 1950 to 1954. Jeep was a part of the Kaiser interests in the 1950s and 1960s.

At the time of his death, Mr. Kaiser was chairman emeritus and honorary director of Kaiser Aluminum & Chemical Corp., Kaiser Cement Corp., Kaiser Steel Corp. and the Kaiser Foundation Health Plan, Inc., and Kaiser Foundation Hospitals. Earlier, he was chairman of the board of those companies for 20 years.

Mr. Kaiser was born on July 29, 1908, in Spokane, Wash., the son of the late Henry J. Kaiser, founder of the Kaiser enterprises. Edgar F. Kaiser joined Kaiser company in 1930 as superintendent of a pipeline project in Kansas. He played a role in the construction of the Hoover, Bonneville and Grand Coulee dams and, during World War II, was general manager of three Kaiser shipyards in Portland, Ore.

In 1947, Mr. Kaiser was appointed general manager of Kaiser-Frazer Corp., which was manufacturing autos in Willow Run, Mich. Kaiser-Frazer became Kaiser Motors Corp. in 1953 when it acquired the operating assets of Willys Overland, Inc., including its Jeep operation.

After 1955, Kaiser Motors built only Jeep vehicles. The name was changed to Kaiser Industries in 1956 and Edgar Kaiser was named president. Mr. Kaiser became chairman of the board of Kaiser Industries in 1968.

Kaiser sold its Jeep operation to American Motors in 1969. Kaiser Industries continued as the parent firm of the Kaiser companies until its liquidation in 1980.

Mr. Kaiser was a past director of Bank America Corp. He served on presidential councils during the Kennedy, Johnson, Ford and Carter administrations and received numerous awards for promoting economic and social reforms.

He was awarded the President's Medal of Freedom in 1969 for his efforts to increase the availability of low and moderate income housing while heading President Johnson's committee on urban housing.

Vining joins Ovshinsky firm

TROY, Mich. — Richard A. Vining, former executive vice-president of manufacturing, engineering, product development and purchasing at Chrysler Corp., and a former member of Chrysler's board of directors, has joined Energy Conversion Devices, Inc., as vice-president, Thermoelectric Division.

Stanford R. Ovshinsky, president of ECD, said plans for commercialization of ECD's proprietary developments in thermoelectricity (the direct solid-state conversion of heat to electricity) are being accelerated.

Early-December car sales dip to year's low of 126,234

By Jenny L. King
Staff Writer

Early - December domestic new-car sales set a record of sorts: They reached a record low for the 1981 calendar year thus far, both in actual numbers and in the daily selling rate.

Dec. 1-10 retail sales totaled 126,234, down 27.82 percent from the year-ago 174,898 and the lowest since 1958 when 93,919 cars were sold.

The daily selling rate was 14,026, down from 19,433 last year.

Prior to this period, the low for 1981 was 128,041 in the first period in January, and its 16,005-daily selling rate had been the worst average.

Year-to-date sales missed the six million mark by 25,000 units and were 4.88 percent behind 1980. Through Dec. 10, the total was 5,974,944 compared with 6,281,730 a year earlier.

All five U. S. auto makers were down for the period, and Cadillac was the only make to report an increase. Standard-size Cadillac was the number-five selling nameplate Dec. 1-10, its first appearance in that lineup this year.

General Motors dropped 26.44 percent, to 79,880 from 108,585 last year. Ford Motor Co. sales of 24,733 were down 37.68 percent from 39,688. Chrysler Corp. slipped 14.62 percent, to 15,826 from 18,535. Volkswagen of America was off 16.12 percent, to 3,095 from 3,690, while estimated sales of American Motors passenger cars were 2,700, down 38.64 percent from 4,400.

• GM's share of the early December market was 63.28 percent, up from 62.08 percent in 1980. Ford sales accounted for 19.59 percent, down from 22.69 percent. Chrysler earned 12.54 percent of the domestic market, up from 10.60 percent. VWoA cornered 2.45 percent, up from 2.11 percent, and AMC stood at 2.14 percent compared with 2.52 percent a year ago.

Cadillac was the only winner in the make sales standings. Cadillac rose 27.25 percent in early December, to 7,192 from 5,652 last year. The other GM makes dropped: Chevrolet was down 36.69 percent, Buick was down 32.50 percent, Pontiac was down 30.27 percent and Oldsmobile was down 9.74 percent.

Ford Division plunged 39.97 percent, Mercury dropped 35.15 percent and Lincoln was down 16.00 percent.

Chrysler missed its year-ago level by just 2.14 percent, Plymouth was down 13.27 percent, Dodge was down 19.21 percent and Imperial plummeted 73.72 percent.

Oldsmobile Cutlass (including Supreme) was the top - selling nameplate in early December, with sales of 8,494 units. It was followed by Chevrolet Chevette at 6,544, Chevrolet Citation at 5,832, standard Chevrolet (Impala - Caprice) at 5,386 and a newcomer, standard Cadillac, at 4,473.

A year ago the top five were: Citation, Ford Fairmont, Chevette, Ford Escort and standard Chevrolet.

Nault to expand shop

MANCHESTER, N. H.—Richard Nault has disclosed plans for construction of a 30-bay addition to the service facility at Nault Ford here.

For first time since May

Year's auto output falls below 1980

By Patricia Hoffman
Staff Writer

For the first time in almost seven months, year-to-date auto output has slipped below the comparable 1980 total. The last time this happened was the week ended May 23.

So far this year, the makers have assembled 6,225,156 cars, down slightly from 6,244,882 completed at this time in 1980.

The return of six Ford assembly points last week helped boost estimated output up 20.04 percent from 97,589 the previous week to 117,149. The total, however, was 10.65 percent below the 131,110 cars built in the comparable 1980 week.

Breakdown for the week by company is: General Motors, 65.12 percent; Ford, 21.34 percent; Chrysler Corp., 7.85 percent; Volkswagen of America, 3.51 percent and American Motors, 2.18 percent.

Checker Motors' Kalamazoo facility remained idle last week after an early holiday downtime which began Nov. 18. No start-up date has been scheduled yet for the plant.

Chrysler closed two of its assembly points early for the holidays last week. The St. Louis plant will remain idle until Jan. 11, and the Newark facility will be closed until Jan. 18. The extensive downtime at both plants is to control inventories.

Also down for the holidays are General Motors' Leeds and Lordstown facilities. Leeds, which was idled Dec. 7 to convert to the J-car, is slated to return Jan. 11. Lordstown, which closed Nov. 25 due to poor market conditions, is slated to resume production Jan. 4.

GM's Janesville point remains down for a five-month changeover to the J-car. The facility closed Oct. 19.

Volkswagen of America will close the doors for the holidays at its Westmoreland facility at the normal time (Dec. 23). The point will remain idle until Jan. 11, at which time it will cut Rabbit production from 822 units a day, to 749 units a day. Approximately 350 employes will be placed on indefinite layoff.

Ford resumed production last week at its Lorain, Kansas City, Chicago, Dearborn, Wayne and Wixom facilities.

Ford's Metuchen and San Jose points were idle last week for inventory control.

All car assembly points will be closed Wednesday (Dec. 23) for the holidays.

Pittsburgh agency to handle all Rockwell ads

PITTSBURGH.—A hometown incumbent picked up Rockwell International's $10 - $12 million advertising account. Effective in February, Ketchum MacLeod & Grove will handle all of Rockwell's accounting. It previously shared the business with Campbell-Ewald, Warren, Mich.

KMG's "proven high technology capability, particularly on the West Coast where we needed it;" its successful handling of Rockwell accounts it already had and its Pittsburgh location "near our corporate headquarters" were cited by Phil Jacques, Rockwell's corporate ad director, as chief reasons for the selection.

"We lost to the hometown boys," said one adman whose agency had been pitching the account.

"They (Rockwell) gave us a very good briefing," he added. "They were nice people to work with. We have a lot of respect for them. Someday we'll do business. We're disappointed, but we understand the logic of their choice."

Runners-up included Clinton E. Frank, a Campbell-Ewald subsidiary; Kenyon & Eckhardt, Troy, Mich.; Young & Rubicam, New York, and N. W. Ayer, New York.

Gains by Ford boost week's truck production

Production at all of Ford Motor Co.'s assembly plants helped boost truck production substantially last week. The Ford gains overcame losses caused by early holiday downtime at International Harvester's Ft. Wayne and Springfield facilities.

Truck output last week was scheduled at 37,935 units, a gain of 22.74 percent from 30,907 in the previous week. But the total was 7.36 percent below the 40,947 in the comparable 1980 week.

Year-to-date output for the truck manufacturers is 1,601,517, up 2.63 percent from 1,560,513 in the comparable 1980 period.

Four Ford plants returned to work last week, Kansas City, Michigan, San Jose and Kentucky.

International Harvester's Ft. Wayne and Springfield facilities closed last week (Dec. 14) for the holidays. Both points are slated to return Jan. 4.

All truck facilities will halt production Wednesday (Dec. 23) for the holidays.

Volkswagen of America's Westmoreland plant returns Jan. 11, pickup truck production will be cut from 118 units a day to 107 units a day.

Canadian car production declines, but trucks gain

Although Canadian auto production dropped 5.39 percent last week due to downtime at Ford Motor's Oakville facility, the return of General Motors' Scarborough (van) plant helped boost truck output 17.15 percent. The truck total was up despite early holiday closings at International Harvester's assembly points.

Last week, the auto makers scheduled 14,353 units, down from 15,170 the previous week and down 15.66 percent from 17,018 in the comparable 1980 week.

The truck manufacturers slated 10,972 units last week, a gain from 9,366 units the previous week, but down 16.43 percent from 13,129 in the comparable week last year.

So far this year, the auto makers have assembled 785,181 units, down 4.69 percent from 823,790 in the comparable 1980 period.

Year-to-date output for the truck makers is 497,895, down slightly from 500,929 at this time last year.

General Motors' St. Therese car facility remained down last week. It has been idle since Nov. 30 because of poor market conditions. The plant will remain down through the holidays with operations slated to resume Jan. 11.

Ford's Oakville facility was idle last week for inventory adjustment, and Ford's St. Thomas plant returned last week with production of the three-door and five-door Escort and Lynx. St. Thomas was idle the week of Dec. 7.

International Harvester's Vancouver and Chatham facilities closed early for the holidays last week and are expected to return Jan. 4.

Most Canadian assembly points will close Dec. 23 for the holidays.

EPA proposes averaging for 1985 diesels

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — U. S. and foreign makers offering diesel power in passenger cars and light-duty trucks would be offered the option of averaging emissions from these vehicles to meet the diesel particulate standard of .2 grams per mile in 1985 under regulations proposed by EPA.

Were the companies to take advantage of the averaging scheme, they could as a whole save from $188 to $376 million over a five-year period without "any appreciable loss of air quality benefits," EPA says.

The averaging concept had been suggested to the agency by General Motors and Volkswagen of America, two firms deeply committed to diesel technology.

Both firms had offered averaging programs, but EPA decided to reject these on anticompetitive grounds and instead is proposing a limited-scope averaging plan it believes avoids most of the anti-competitive aspects as well as some negative environmental impacts inherent in both the GM and VWoA plans.

• EPA is suggesting that under its proposal a manufacturer could establish individual particulate emissions limits for each engine family included in the averaging program such that when they were weighted by their respective family production and averaged together, the manufacturer's resulting diesel average particulate level would be equal to or below the applicable particulate standard.

In no case, however, would EPA permit a vehicle to emit more than 0.4 grams per mile particulates.

EPA said it was taking that position, even though it recognized this will limit the range of the averaging concept, to deal with the possibility of large numbers of relatively high particulate emitters being sold in one region, for example, a taxi fleet of vehicles emitting near the .4 grams per mile limit for the Manhattan area.

The agency said it is also considering not allowing the selling of vehicles normally counted in an averaging program, in high altitude areas and California.

EPA says it will not get involved in enforcing the particulate standard under the averaging proposal until the end of the calendar year but that for inspection and maintenance purposes will require that each vehicle be labeled with its applicable particulate standard.

Thus, some vehicles will have

Dream showroom

Wright building done right

Mercedes-Benz Manhattan recently reopened its renovated showroom which was designed originally by Frank Lloyd Wright in 1954. One of only three buildings in New York City by the famous architect, the dealership showroom now makes use of one feature in the original design that was not implemented: A mirror built into the ceiling in the shape of a three-pointed star. Through the use of additional mirrors, a customer can see five cars at a time in the relatively limited space (3,600 square feet).

UAW's decision due on early talks at Ford and GM

By Marjorie Sorge
Labor Editor

The UAW will decide early next month whether it will conduct early negotiations with the auto makers.

Members of the union's Ford and General Motors councils will meet separately Jan. 8 in Chicago to weigh the poor economic situation in the auto industry and their own problems against early bargaining.

UAW Vice Presidents Donald Ephlin and Owen Bieber called the meetings of the 225-member Ford Council and the 300-member GM Council after the union's bargaining units had polled the feelings of the rank-and-file. It is now up to the two councils to decide whether there will be early negotiations. The current contracts expire Sept. 15. Ordinarily, bargaining would begin in mid-summer.

The UAW Executive Board voted Dec. 9 to allow the councils to make the decision on early bargaining. It had previously said the union would not begin early negotiations with any company.

"The depression in the auto industry has gone from bad to worse," Ephlin said. "This is the 23rd month in which indefinite layoffs have affected more than 150,000 workers."

He said Ford is in bad shape and something must be done to protect jobs. Ephlin is head of the UAW's Ford Department.

Bieber, head of the GM Department, said, "Indefinite layoffs at GM right now are at their highest level in months and the prospects for the immediate future don't look optimistic."

There are 51,222 U. S. hourly workers indefinitely laid off at Ford and 112,000 off at GM.

While Alfred S. Warren, GM's labor relations vice president, said the move was another positive step by the union, GM Chairman Roger B. Smith said it may be too late to save some jobs.

"We've asked them and asked them to sit down and negotiate with us before it's too late. I'll tell you something — it's too late for somebody today," Smith said in an interview with UPI last week.

He did, however, praise the union's decision to begin early negotiations if the workers approve.

Ford Chairman Philip Caldwell also praised the decision, calling it a "positive move by the UAW." He added, "We hope that this is a step toward negotiation of a new contract for which there is such an urgent need."

Ford is expected to lose between $950 million and $1 billion this year, while GM is expected to show a profit of about $350 million.

• While it is conceivable that one of the two UAW councils could vote not to begin early negotiations, Ephlin said the situation is "very unlikely." He said it is very advantageous to both the companies and the union to keep the present pattern bargaining form.

Earlier, some analysts thought the 1982 negotiations might mark the end of pattern bargaining because of the varying financial situations at, specifically, Ford and GM.

This could result in adding another tier to the auto company wage structure. GM and Ford have already complained that Chrysler Corp. has a cost

Program includes payments to dealers for over-quota orders

New Chrysler rebate: $300-$1,000

By Joseph Bohn
Marketing Editor

Chrysler, as previously reported, (Automotive News, Dec. 21), is beginning the new year the way it ended the old — with a consumer rebate. "Get a car; get a check" is being revived as the advertising theme.

The newest rebate, which starts Jan. 1, goes across the board on all '81 and '82 domestic and imported cars and trucks, except Newport/New Yorker, St. Regis and LeBaron convertibles, with payments to customers of $300 to $1,000.

Chrysler is additionally paying bonuses of $100 to $400 per unit to dealers who order more than their required wholesale allocation, and $300 per unit for vehicles ordered but not sold during the rebate period. Dealers must order their quota of cars to participate in the retail rebate.

The rather complicated program works this way.

The retail rebate portion runs from Jan. 1 to Feb. 28. Chrysler pays all the rebate money (no contribution by dealers) in the following amounts:

1. $300 — All '81 Omni/Horizon, all '82 Omni/Horizon, except Misers; all '81 and '82 TC3 and 024, including Misers; all '81 and '82 import cars; all '81 Aries/Reliant and all '82 Aries/Reliant, except the low-line 2-door $5,995 price leader; all Dodge 400 and LeBaron front-drive models except the LeBaron convertible, and all Miser pickup trucks.

2. $500—All '81 and '82 import trucks; all '81 and '82 vans; all '81 and '82 regular pickup trucks, excluding Misers; all '81 and '82 Diplomats; '82 Gran Fury; '81 LeBaron, and '81 and '82 Cordoba/Mirada.

3. $1,000—All '81 and '82 Ram Wagons (Sportsman); '81 Trail Dusters; '81 and '82 Ramchargers, and the '81 and '82 Imperial.

• In order to participate in the rebates, dealers must order a specified number of vehicles for both January and February. The order allocations are based on the average of the dealer's retail sales during September-October-November of 1981.

A dealer must place his full January allocation order by Jan. 8 and his February allocation by Feb. 5 to participate.

However, retail sales are tied to wholesale order objectives. If a dealer was required to order 100 cars for January, but sold only 75, he can deduct 25 units from his February order allocation. Conversely, if he ordered 100 units for January, but retailed 125, he would be obliged to order an additional 25 for his February allocation.

The replacement feature of the program, which emphasizes sales in order to keep factory lines running, led to Chrysler calling its program "the one for one retail incentive program."

Dealers who voluntarily order 25 percent more units than their

Sizing Ford's future fullsizers

DEARBORN. — Ford Motor's next wave of fullsize cars, codenamed "Taurus," will be about the same size as today's Granada. Front-drive LTD and Marquis replacements, due in late '85, will be five-passenger models riding on a 105.7-inch wheelbase, down more than eight inches from current models. Powertrain is said to be Ford's new "Penta" engine, a four-cylinder derivative of the old 200-CID inline six, and a five-speed transmission. The 105.7-inch platform will also be used for the new FWD Lincolns, which bow in mid-1986.

Renault lands on Arab boycott list

PARIS. — Renault has been placed on the Arab boycott list. The move stems from Renault's 46-percent stake in American Motors, which has a manufacturing license to produce Jeeps in Israel.

Nissan creates financing subsidiary

NADA, vehicle firms meet in Washington

Expansion of AUTOCAP charted

WASHINGTON.—Auto manufacturers and distributors committed to the AUTOCAP system joined NADA's AUTOCAP Advisory Committee here to develop methods to strengthen the consumer complaint mediation program.

The meeting, first of its kind, resulted in several recommendations to NADA, including suggestions for technical systems to review and monitor AUTOCAPs. Suggestions were also made on ways to recognize outstanding programs and deliver professional training to state and local AUTOCAP staffs.

Richard Wagner, NADA Consumer Affairs Committee Chairman, said NADA has renewed its commitment to AUTOCAP, "financially, as well as philosophically," and is stepping up efforts to expand the program.

Penelope Longbottom, former AUTOCAP director and current NADA media director, has been named NADA director of media and consumer affairs. She will work with the existing staff in an attempt to expand AUTOCAP into a nationwide operation by the end of 1982.

Factory representatives at the meeting promised that their zone offices will contact dealers in non-AUTOCAP regions about the benefits of the third-party arbitration system. They will urge their dealers to press their local dealer groups to add AUTOCAP, Longbottom said.

Central to the day-long meeting were reports from factory representatives detailing experiences with the AUTOCAP partnership established nearly one year ago.

Under that agreement, participating companies agree to honor AUTOCAP panel recommendations for product and warranty questions not satisfactorily resolved through in-house systems. The decisions are not binding on the customer.

Thirty-two AUTOCAPs currently provide this mediation service for American Motors and 16 importers and distributors.

Several auto makers present described stepped-up efforts to promote AUTOCAP to their owners, dealers and zone offices. Volvo of America distributed a 12-page book on the program to all its dealers at new-model introduction.

Toyota Motor Sales and Saab-Scania of America included AUTOCAP in their 1982 owners' manuals. Saab-Scania also incorporated the program into a new-model introduction film for dealers.

Other manufacturers and importers represented at the meeting were AMC, American Honda Motor Co., American Isuzu Motors, DeLorean Motor Co., Fiat Motors of North America, Jaguar-Rover-Triumph, Nissan and Subaru of America.

Duncan Read, industry relations director of the Federation of Automobile Dealer Assns., of Canada, also attended. AUTOCAP is being reviewed by the FADA as it prepares to recommend a third-party dispute resolution program to its 13 member associations.

Representing the Automobile Importers of America were George Nield, president, and Milton Andres, legal counsel.

AUTOCAP Advisory Committee members attending were Richard Wagner, NADA director for Connecticut and chairman of the committee; Mark Herrman, NADA director for Metropolitan New York; Jack Price, NADA director for New Mexico; Gerry Murphy, managing director of the Automotive Trade Assn. of the National Capital Area, and Dick Welte, executive vice president of the Niagara Frontier Automobile Dealers Assn.

Older imports to get eased tailpipe rule

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — An EPA rule that requires individuals importing a vehicle not certified to U. S. tailpipe standards to have that vehicle modified before it can be driven is being revised by the agency, on an interim basis, to ease this requirement for older vehicles.

According to EPA officials, individuals importing a vehicle more than five years old, and who have never imported a vehicle before, will not be required to have the vehicle modified to meet U. S. tailpipe standards. This will be allowed one time only, the officials said, and does not apply to commercial importers.

They said individuals still must bond the vehicle, as has been the practice, because the NHTSA is not participating in the action.

Nontheless, the officials said, there should be a reduction in both time and expense for people bringing in an older vehicle and for the EPA, too. Indeed there should be, because some vehicles are very costly to modify.

They said the EPA adopted the new policy on an interim basis to see what the results would be and as part of its rulemaking procedure regarding a rule it has proposed allowing individual exemptions from the import regulations altogether.

The officials said they believed this proposal will be dropped for one similar to the interim policy except that the final rule might also eliminate the bonding requirement.

Manufacturers and importers for resale had objected to the proposed rule on the grounds that it would lead to a tidal wave of non-certified vehicles entering the country, leave the makers holding the bag when parts for such vehicles are not available and leave them at a distinct competitive disadvantage.

AOT luncheon in Atlanta slates GM's McDonald

MIDLAND, Mich. — F. James McDonald, president and chief operating officer of General Motors, will be the featured speaker at AOT's 43rd annual luncheon in Atlanta on Feb. 21.

The luncheon will be held in connection with the NADA Convention and Exposition.

Recipients of AOT's 1982 Distinguished Service Awards will be honored at the luncheon. AOT Chairman Drex Minshall will announce the new Hall of Fame electees and the New York Times/Automotive Hall of Fame Automotive Industry Leader of the Year award.

The fleet's in

Frank Hennessy, left, president of Handleman Co., receives keys to a Plymouth Reliant Custom from Fran Hazelroth, director of fleet programs for Chrysler Corp. Handleman is taking delivery of 362 Chrysler Corp. K-cars.

Chrysler fleet sales reported up 28 pct.

DETROIT. — Chrysler Corp.'s fleet sales are running 28 percent ahead of last year for the first two months of the model year, said Francis G. Hazelroth, director-fleet programs.

Chrysler K-cars, particularly, are responsible for the big increase, said Hazelroth, announcing the latest sale of a fleet of 362 cars to Handleman Co., which produces and markets phonograph records.

Hazelroth reported October-November fleet sales of 30,957 cars, compared with 24,265 for the corresponding period a year ago. Truck sales increased 32 percent with 4,311 units sold in the first two months of the 1982 model year compared with early 1981-model sales of 3,275 units.

Plymouth Reliant and Dodge Aries K-car sales increased 127 percent in this period with 21,795 units sold, compared with 9,594 in October-November, 1980.

K-cars were the choice of Handleman, which said that 70 percent of its total fleet would be Reliant and Aries models. Deliveries to Handleman are expected to be completed this month.

Selection of the cars followed a year of extensive testing in Handleman branch offices in Baltimore, Denver, and Los Angeles, said Dan F. Whitt, Director of Traffic/Transportation for Handleman. He cited economy of operation and dependability recorded during the test program as key reasons for the purchase.

The cars will be custom models, equipped with Chrysler's high-mileage "Trans-4" 2.2-liter engines and automatic transmissions.

The cars are being used in Handleman's lease-car program for sales representatives throughout the U. S. and Canada.

Japan's makers vow to fight to end against tougher quota

TOKYO.—Japanese auto makers are "prepared to fight to the bitter end" against any attempts to further reduce their exports to the U. S., the Japan Economic Journal reported.

The reaction followed suggestions by U. S. Administration officials that the Japanese may be asked to cut their auto exports below the 1.68-million limit imposed by "voluntary" restraints.

Terms of the agreement negotiated last May called for a 1.68-million unit cap on Japanese car shipments in the April 1, 1981-March 31, 1982 period.

In the second year of the agreement, the Japanese makers are allowed 1.68 million cars plus 16.5 percent of anticipated growth in the U. S. market. A third year of unspecified restraints was also possible under the accord.

The problem is that there has been no growth in the U. S. market. To the contrary, even with Japanese exports cut 7.7 percent below 1980 levels under the quota, they are expected to take a larger share of the shrunken market during the first year under the import quotas.

The Japanese makers point to projections of 9.5 million sales in 1982. Under the system negotiated, their share should be 1.81 million exports—not something less than 1.68 million, they said.

The financial newspaper quoted one Japanese industry leader as saying, "It's nonsense. When an accord was reached between the two countries last spring, I heard nothing from our government about the possibility of shipments in the second year being set smaller than in the first year."

The Japanese also pointed to projections made by U. S. Transportation Secretary Drew Lewis that an upturn in demand will begin in the second half of 1982.

Voluntary curbs in Europe and a depressed domestic market have made the U. S. even more important to the Japanese auto industry. The U. S. is its largest export market.

Fuel heater aids starting, Peterbilt says

NEWARK, Calif. — Peterbilt Motors Co. has announced the availability of a new in-line fuel heater which eliminates diesel fuel-flow problems due to frozen or clogged lines or jelled fuel.

The in-line heater—called the "HOTLINE" — melts the wax which can build up in diesel fuel during cold-weather operation, a spokesman said, permitting trucks to start easily at low temperatures, to be fast-idled to warm the engine without stalling, and to operate without the power loss or stalling caused by wax buildup in filters and lines under cold-weather operating conditions.

The HOTLINE heater is available as an option on all new Peterbilts or can be purchased from Peterbilt dealers for installation on any Class 6, 7 or 8 diesel-powered vehicle.

The new heater also is available at all Peterbilt parts outlets in the U. S. and Canada.

The HOTLINE is a self-contained, self-regulating, 12-volt direct-current heating device installed inside the fuel line between the fuel tank and the primary fuel filter.

Installation involves replacement of the existing fuel line

S-10 start is best ever for Chevrolet trucks

DETROIT.—Chevrolet's all-new, domestic compact pickup truck — the S-10 — is the best-selling new vehicle in the division's 65 years of producing trucks, according to M. H. (Mike) Erdman, national truck sales manager.

The S-10 was introduced officially in dealer showrooms early in November, and through the first 10 days of December, 11,006 units had been retailed. Erdman said Chevrolet has a backlog of about 28,500 retail orders.

Veteran truck dealer honored by GMC

T. E. Dickerson, left, Dickerson GMC, Inc., Roanoke, Va., was honored recently for his more than 25 years of GMC truck sales and service. Presenting him a plaque is John Rako, GMC's Washington zone manager. Looking on is Tommy Dickerson, the dealer's son.

Subaru restyles BRAT, its first since '78 intro

PENNSAUKEN, N. J. — Subaru's 1982 open-bed BRAT (Bi-Drive Recreational All-Terrain Transporter) has undergone its first restyling since the 1978 introduction, with the emphasis on aerodynamics and new creature comforts.

A new exterior feature is the standard Halo Twin roof, a two-piece combination of T-top and sunroof which can be opened or removed entirely. In its open position, it gives the vehicle a gull-wing look.

When the panels are removed, they can be stored in specially designed protective areas behind the interior seats.

New interior creature comforts of the 4x4 BRAT include a tilt steering wheel and a driver's seat with adjustable lumbar support.

BRAT's new body includes a recessed kick-step imprinted with a "4WD" logo. Subaru said the kick-step provides easy access to the vehicle's two bed-mounted, rear-facing jump seats.

The new GL model features halogen headlights and a halogen off-road running light in the center of the new black grille. An all-new instrument panel with greater visibility is standard on the GL.

• A monitor display on the panel lets the driver know when a door's ajar or the parking brake is engaged, a first for the BRAT. It also informs the driver about fluid levels, defroster use and other functions.

Another standard feature on GL models is the dual-range

Continued on Page 22, Col. 2

'82 BRAT features Halo Twin roof

Standard on Subaru's '82 BRAT models is the Halo Twin roof, a two-piece combination of T-top and sunroof. In the open position, it gives the 4x4 vehicle a gull-wing look.

Total dips after September upturn

October registrations go into retreat again

After a one-month increase in September over a year ago, registrations of new trucks of all types in the U. S. in October fell back into the pattern which has prevailed in the industry most of the time since early 1979.

During the month, according to R. L. Polk & Co. statistics, there were 170,584 new-truck tallies, a decline of 8 percent from the previous year's 185,434 units.

September registrations were almost 3 percent higher than the total in 1980.

The 10-month count was down 12.4 percent from last year, 1,836,260 versus 2,095,919, with declines exceeding 10 percent in all three market segments.

Lone bright spots in both the 10-month and October reports were the increases in registrations of Group 3 trucks and non-captive imported light trucks.

Group 3 registrations through October were up 79.5 percent to 10,489, compared with 5,843 a year ago. During the month, 1,041 units were tallied, a gain of 102.5 percent over the year-ago 514.

Ten-month registrations of the non-captive imports showed an increase of 3.4 percent, from 256,007 units in 1980 to 264,689 this year. In October, the count was 29,678, an increase of 25.3 percent over last year's 23,677 units.

Light-truck registrations through October were off 11.8 percent from a year ago, 1,656,180 versus 1,878,176. Mediums totaled 46,339, a dip of 14.7 percent, while heavies were down 18.2 percent, from 163,437 in 1980 to 133,741 this year.

Because of the improvement in sales of the non-captive imports during the year, registrations in Group 1—into which almost all of the imports fall—suffered the smallest decline in the 10-month totals.

Through October, the Group 1 count was 921,740, a drop of 3.8 percent from last year's 958,116. Group 2 tallies were down 20.8 percent, from 914,217 units in 1980 to 723,951.

Registrations in Group 6, the

Continued on Page 22, Col. 5

HD registrations for 10 months off 18 pct. from '80

Ten-month registrations of new heavy trucks in the U. S. were down 18.2 percent from last year and almost 26 percent below the alltime January-October high achieved in 1979.

Through October, according to R. L. Polk & Co. statistics, 133,741 new Groups 7 and 8 trucks were registered, compared with 163,437 a year ago and 181,053 in the like period two years ago.

During the month, there were

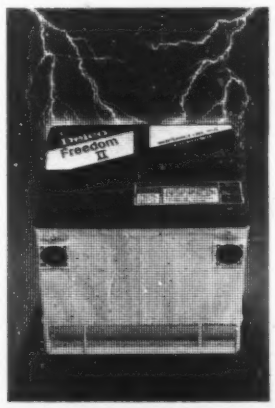
A NEW DEFINITION OF POWER.



Delco Remy's introduction of the maintenance-free Delco Freedom Battery in 1970 gave new meaning to the word "power." Today, we've taken another step forward. Announcing the newest Freedom Battery—The Delco Freedom II.

Freedom II combines our best maintenance-free technology with the construction features proven in our heavy-duty truck batteries. The result is a battery with increased reliability and more efficient starting power than the original Freedom.

The energy-efficient, maintenance-free Delco Freedom II Battery.

Cuts are similar to those at Ford

GM slashes white-collar benefits

By Marjorie Sorge
Labor Editor

DETROIT. — General Motors has cut the benefit package of its salaried workers. The cuts begin to take effect in January.

In a notice to its 19,000 white-collar workers worldwide, GM said the cuts were taken "in light of many difficult challenges facing the corporation."

Some observers say the cuts in the salaried benefits are to gear the blue-collar workers toward cuts in the union contract which expires next year. Negotiations on that pact could begin as early as next month.

UAW officials have said the auto companies must show an equality of sacrifice if they expect any concessions from the union.

Ford Motor Co. made similar changes earlier this month.

Changes in the GM salaried package include:

1. Discontinuing the nine days supplemental time off (STO) and one "floating" holiday for classified workers. Unclassified workers will lose five days vacation they were granted in lieu of the STO days and floating holiday. Those days are the white-collar equivalents of the hourly paid personal holidays (PPH). "Unclassified" employes are GM's top management, those in the bonus group.

2. Cost-of-living-adjustments (COLA) will now be paid only for time worked. Previously COLA calculations included time not worked such as vacations, holidays, sick times and other absences. For bonus-eligible employes, an amount equivalent to COLA will be deducted from their base salary for time not worked.

3. Effective immediately, vacations will temporarily be cut in half. Workers normally get between three and five weeks vacation. It is not certain how long GM will keep this cut in effect.

4. In the major medical portion of the health care program, the annual deductibles will be raised from $50 to $125 for individuals and from $100 to $250 for families. Also, the program will pay 80 percent of the first $5,000 of covered expenses after the deductible is paid and 100 percent after. The program had paid 80 percent of the first $2,500 and 100 percent thereafter.

The monthly contribution will be increased Feb. 1, 1982 from 45 cents to $2.20 for single coverage; from $1.10 to $4.70 for two-party coverage and from $1.30 to $7.70 for family coverage. Also, $3 co-payments for prescription and non-prescription drugs will not be covered.

Cuts will also be made in the amount reimbursable for nursing care, and medical charges judged unreasonable will not be covered.

• GM has also changed the savings-stock purchase program, subject to rulings by the Internal Revenue Service.

The earn-out period will be reduced from three years to 2½ years making it possible to receive two distributions in 1982.

The 6 percent penalty on withdrawals of GM contributions and earnings from matured classes is eliminated. This means workers can leave their funds in the tax-sheltered trust beyond maturity and still have access to them without paying a penalty.

GM matches the first 10 percent of savings deducted from employes' salaries. Savings above that amount are not matched. Now, under the new program, earnings on savings above the 10 percent of eligible salary can be withdrawn along with the savings before maturity.

In the spring of 1982, GM will introduce a new personal retirement income plan allowing employes to participate in the Individual Retirement Accounts (IRAs). Specifics of this plan are not available but it will allow employes to contribute up to $2,000 annually (deductible from taxable income).

In an Automotive News interview (Oct. 12), Kenneth E. Olthoff, GM's general manager, worldwide employe benefits, said hourly workers might be eligible for IRA benefits in the future depending on what is negotiated in the new agreement.

GM has already begun to lay off 13,000 salaried workers. GM posted a $468 million net loss in the third quarter, but is expected to show a profit for the year.

Cushman's little workhorse

The 1982 Cushman Delivery Vehicle features a restyled, more spacious cab with larger windows, wider doors and an improved flow-through ventilation system with optional roof vent accessory for increased driver comfort. The vehicle has a turning radius of less than 17 feet and a top speed of 39 MPH. Payload for the 60-cubic-feet carrier is rated at 1,000 pounds. OMC Lincoln-Cushman, Lincoln, Neb., is the manufacturer.

UAW decision due on opening negotiations at GM and Ford

Continued from Page 1

advantage because of the concessions granted by the UAW to help Chrysler get the federal loan guarantees. UAW President Douglas A. Fraser has said he doesn't like the present two-tiered wage structure and does not want to add another layer.

The Big Two have also said they have an $8 an hour labor cost disadvantage with the Japanese and want it all back in the next contract. The UAW has said there is a cost difference but it is not as high as $8.

When the contracts are being negotiated, both sides will hang tough. The union wants job security and the auto companies want concessions.

According to Ephlin, one major demand on the union's side will be that every job exported by a U. S. auto company be replaced by a job imported from one of its overseas subsidiaries.

The Ford and GM councils are not the only ones faced with possible bargaining. Both American Motors and International Harvester Co. have asked the union for changes in the current contracts.

The AMC Council met earlier this month and authorized a fact-finding mission on the company's proposed employe investment plan. That plan calls for workers to lend the company 10 percent of their raises for 22 months. Workers would be paid back with 10 percent annual interest.

Before the UAW Executive Board's decision, the AMC Council vetoed the plan. The Canadian segment of the council has also been opposed to the proposal but is willing to participate in the fact-finding operation, according to Buzz Hargrove, UAW administrative assistant.

That plan could generate as much as $150 million for AMC.

IH has asked the union for $100 million in concessions by next October.

The IH contract expires Oct. 1, 1982. The AMC contract expires in September, 1983.

Total is up a fraction from 1980

Year's auto production: 6,295,205

By Patricia Hoffman
Staff Writer

While estimated U. S. auto production for 1981 showed a slight gain from that of 1980, the 1982 January and first quarter forecast is anything but favorable.

The makers wound up 1981 with output planned at 6,295,205 units, up a fraction from 6,246,749 in 1980.

For January, auto production is slated at 373,361 units, down 13.63 percent from 432,284 in the comparable 1981 month, and the outlook for first quarter is 1.4 million, down 7.03 percent from 1,539,978 in the first three months of 1981.

In the shortened holiday week last week, the makers targeted output at 72,782 units, down 36.39 percent from 114,416 the previous week, but a gain of 53.93 percent from 47,283 in the comparable 1980 week.

Breakdown for the week by company is: General Motors, 63.25 percent; Ford Motor, 26.52 percent; Chrysler Corp., 4.74 percent; Volkswagen of America, 3.39 percent, and American Motors, 2.10 percent.

Checker Motor's Kalamazoo plant remained idle last week after closing Nov. 18 for changeover. No date has been given for resumption of production.

Downtime was scheduled last week at three GM facilities. The Lordstown point was idled Dec. 4 and is slated to return Jan. 4. GM's Leeds point, also idled Dec. 4, will remain down after the holidays for conversion to the J-car. The facility is slated to return Jan. 11.

GM's Janesville point, down Oct. 19, continues a five-month shutdown to convert to the J-car.

Chrysler's St. Louis and Newark facilities were both closed Dec. 14 for early holiday downtime. St. Louis is slated to return Jan. 11, and Newark Jan. 18.

Also at Chrysler, the Jefferson point was idled last week to adjust inventories.

Volkswagen of America has extended the holiday downtime at it's Westmoreland facility. The point will resume operations Jan. 11.

All other car facilities closed last Wednesday (Dec. 23) for the holidays.

Year's car output in Canada slips 3.9 pct. below 1980

Canadian auto production for the 1981 calendar year, when the final count is in, is expected to drop 3.96 percent below the 1980 total, and truck output is scheduled to fall just a fraction below last year's mark.

Auto makers wound up 1981 with production of 797,710 units, down from 830,624 in 1980.

Truck production for the year was targeted at 505,945 units, down slightly from last year's build of 506,093.

Because of the shortened holiday week last week, auto production was scheduled at 11,078 units, down 29.90 percent from the previous week, but up a substantial 73.26 percent from 6,394 units in the comparable 1980 shortened week.

Last week's truck output was slated at 6,480 units, down 48.33 percent from 12,542 in the previous week, but a gain of 26.66 percent from 5,116 in the comparable 1980 week.

With the exception of two car and two truck facilities, all Canadian production was halted last week (Dec. 23) for the holidays.

American Motors' Brampton car facility was idled early on Dec. 18 and is slated to return Jan. 4.

General Motors' St. Therese car point closed Nov. 30. Operations are expected to resume Jan. 11.

International Harvester's Vancouver and Halifax truck points were idled for the holidays Dec. 14 and are expected to return Jan. 4.

Extended holiday downtime has been scheduled at GM's Oshawa (lines 1 and 2), and at Ford's Oakville car facilities. Both points are slated to return Jan. 18.

Ford's St. Thomas car facility will remain idle until Jan. 25.

Truck production will be halted at GM's Oshawa and Chrysler's Windsor facilities until Jan. 11.

Ford's Ontario truck plant will be idle until Jan. 18.

All other car and truck points are slated to return Jan. 4.

Yancy honored

Albert H. Yancy, left, owner of Yancy Chevrolet, Ashland, Ill., receives his silver anniversary award from Robert F. Svendsen, Peoria, Ill., assistant zone manager.

Truck production for 1981 tops 1980 by 3 pct.

The domestic truck makers expect to wind up 1981 with production slightly ahead of 1980, but the January forecast shows a sluggish start for 1982.

The estimated truck production for 1981 was 1,624,305 units, a gain of 2.94 percent over 1,577,979 in 1980.

For January, the makers forecast 114,671 units, down 18.43 percent from 140,584 in the comparable 1981 month, but the outlook for first quarter production is 443,903 units, up from 425,469 in the comparable 1981 period.

During the shortened holiday week last week, the makers targeted production at 22,094 units, down 42.80 percent from 38,629 in the previous week, but up 39.38 percent from 15,852 in the comparable period last year.

International Harvester's Ft. Wayne and Springfield facilities remained idle last week after closing early for the holidays Dec. 14. Both plants are slated to return Jan. 4.

All other truck facilities closed last Wednesday (Dec. 23) for the holidays.

Extended holiday downtime has been scheduled for Volkswagen of America's Westmoreland plant. The point will be down until Jan. 11.

3 in dealership scheme convicted of bank fraud

SPRINGFIELD, Mass.—Three men whose scheme to salvage the former United Chevrolet in Worcester forced shutdown of the Mohawk Bank & Trust Co., Greenfield, have been convicted of bank fraud by a jury in U. S. District Court.

Nunziato Fusaro, 86-year-old Worcester lawyer; Richard Robidoux, who owned the dealership, and Richard Saccone, who was president of the bank, were convicted on charges of misappropriation of bank funds, falsification of records and unauthorized bank check signing.

The company with no 'employes'

By Marjorie Sorge

BRIDGMAN, Mich. — Weldun International has no "employes," but its president plans to almost double sales in the next two years.

The company's 450 workers are "Weldun people" who Merlin Hanson, Weldun president and sole owner, expects to work with him to expand their business of manufacturing and testing tools and special machines. To hike sales from $40 million to $75 million in two years, he plans to diversify, augmenting automotive - related operations with defense, data processing and aerospace. At the same time, the number of "Weldun people" is expected to grow to 600.

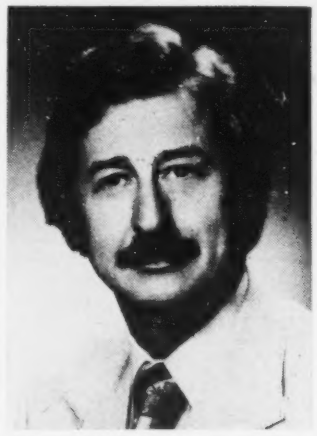
The road to success, Hanson maintains, lies in "interpersonal relationships" of the people at Weldun. In creating a cohesive "family feeling" Hanson has banned the word "employe," saying bluntly that "it stinks, is degrading and dehumanizing — they're all Weldun people" of equal importance.

Being a Weldun person means pitching in wherever and whenever needed, and the "people" seem to thrive on it.

But Hanson takes the philosophy a step further, decorating every office and hallway in the corporate headquarters with paintings and sculptures—Picassos, Dalis, Miros, Rockwells and others. Hanson's office itself is literally an art gallery.

The art seems to bring the people closer together. They all seem to take pride in it, rattling off tales about the backgrounds of the art displayed in their offices.

It is the philosophy of togetherness and diversification that Hanson hopes to parlay into sales growth.



Merlin Hanson: Creating a 'family feeling.'

Automotive operations currently include two of Weldun's four divisions—Special Machine and Mold. The others are Precision Machine, located in nearby Buchanan, and General Tool.

Currently, some 70 to 85 percent of the Special Machine and 95 percent of Mold Division sales are automotive. Of the company's $40 million sales this year the flagship division, Special Machine, accounted for $27 to $28 million, and Mold $5.5 million.

Of the automotive business, General Motors accounts for about 70 percent, Ford Motor Co. 20 percent and Chrysler and American Motors the rest.

Hanson expects that, as the company diversifies, the automotive mix may drop to 65 to 70 percent of sales in the two divisions.

But he quickly points out that there also is room for automotive diversification. For instance, GM's Delco Electronics and Delco-Remy Divisions could be attractive customers for Weldun's new data processing capability.

Machinery making and testing businesses like Weldun's are profiting from Detroit's scramble to downsize vehicles and meet foreign competition. The catch is U. S. manufacturers erroneously think the Japanese are better, Hanson says.

"It's attitude. We only *think* Japanese cars are quality. If we don't watch it, we'll position our companies second to them. I refuse to do that because it's not true.

"It gets down to the ability of management to say 'thank you' for something accomplished."

• Hanson expects Detroit's front - wheel - drive business to "settle" in the next few years, with downsizing programs completed. So the company is steering in new directions.

Weldun built a data processing facility for its entry into the computer market.

"What we're talking about is manufacture of assembly machines for putting things in that world together," Hanson says.

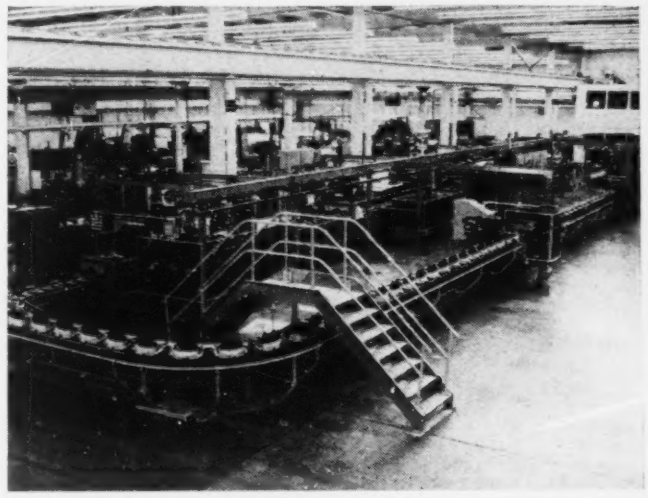
He predicts data processing has "great growth potential within the next five years, much of it in the automotive business," and Weldun wants a piece. Other growth prospects include home personal computers and industrial electronics.

Hanson also envisions the company taking part in Reagan Administration defense programs such as the B-1 bomber and cruise missile. Weldun's major thrust would be jigs, fixtures, precision machining and transfer lines.

Aerospace and energy, especially gas and oil, are possible diversification areas in which Weldun could offer precision machining of parts and valves.

"Even with diversification, automotive will stay the heart of our business," he says. "Some say there's going to be 10 years of continued downsizing; or if safety becomes a big issue again, it might lead to another generation of design and equipment. There's also continual automation."

The company is interested in robotization and "flex systems," the latest automotive buzzword for equipment flexibility. Projects are on the Weldun drawing boards relative to assembly equipment, possibly machines that simultaneously handle several types of engine blocks moving down a line.



Part of Weldun's $40 million annual sales comes from producing synchronous transfer systems such as this front-wheel axle assembly and test unit.

"The auto industry demands a flex system," Hanson says. "It's an evolutionary area where we are going to try to position ourselves to offer it to the automotive and other industries."

Weldun also plans to expand overseas by licensing agreements or building plants, Hanson says, with Mexico and other South American countries likely prospects."

• Is it a disadvantage for a high-technology enterprise to be located in Bridgman, some 250 miles from Detroit?

"Twenty years ago it was necessary to be in a metropolitan area," Hanson contends, especially with a business like Weldun's. Now, he says, that position is diametrically reversed, making the small, out-of-the-way community the ideal spot to run a business.

"The dedication level is higher, company allegiance is excellent, the retention of people is greater," he says. "We have no desire to expand into the big cities."

Although being removed from the mainstream may separate people from top educational facilities, Hanson is trying to overcome that by creating "the GMI (General Motors Institute) of Weldun." The company has invested some $350,000 in facilities at Bridgman to train tool makers, mold makers and machinists and, in the future, Hanson hopes, engineers, electronic specialists and designers.

Weldun has no union because of what Hanson terms "the people-oriented attitude" of the company.

"We (management) hold the people in high regard and spend a great deal of time looking out for their needs," Hanson says. "That doesn't mean we're a gift house and don't have discipline here—we do.

"We 're very close to our people and have many ways of communicating," Hanson says. "We don't need another party to interject. The first step is respect for each other; we maintain that for all our people and our history proves the way we are going is correct."

Weldun's history covers almost 30 years. The company was formed in 1953 by Hanson's former partner, Dan Hillegas, as a suport arm for Wells Aluminum Co. in West Liberty, Ind., to build jigs and fixtures. It also produced Johnson's Wax products and food choppers.

Hanson joined the firm in 1961 and became sole owner when Hillegas retired.

It has been in the automotive business over 20 years, starting in jigs, fixtures and stamping dies.

In 1963 the company entered the general tooling business for automotive and other industries, and in 1967 got into injection molding and, as Hanson puts it, "also got serious about special machine building."

And it's all happened without workers, just "Weldun people."

Weldun's main complex is in Bridgman, Mich.

Supplier Profile: Weldun International

Headquarters: 9850 Red Arrow Hwy.
Bridgman, Mich. 49106
(616) 465-6986

Automotive related products: Injection molding; special machine assembly; assembly testing; transfer lines; assembly and test transfer lines, syncronous and nonsyncronous.

Other business: Aerospace; data processing; precision machining (for off-road vehicles); molds; automation; general tool (for off-road equipment including farm implements and construction vehicles).

Percent of business automotive: Special Machine Division, 70 to 85 percent; Mold Division, 90 percent.

1981 sales forecast: $40 million.

1980 sales: $29 million.

Number of employes: 450

Founded: 1953 as part of Wells Aluminum Co., West Liberty, Ind.

Automotive consumes 10 percent of Canada's plastics production

The rising cost of energy is a problem. But it's also an opportunity for the plastics business, according to The Society of the Plastics Industry of Canada.

The Society reports that more than $3.5 billion is earmarked over a four-year period to build petrochemical plants in Canada. Many of the petrochemicals will be used by the plastics industry.

The Canadian automotive industry currently consumes an estimated 10 percent of all plastic resins consumed in the country.

The table below shows the latest annual figures for Canadian consumption of major plastics resins and materials. There were 57 resin producing plants in Canada in 1980.

1980 Canadian consumption of major plastics resins & materials

(thousands of tonne)

Material	Canadian Production	Plus Canadian Imports	Less Canadian Exports	Total Canadian Consumption	% Change From 1979
Low density polyethylene	439	26	110	319*	— 3.0%
High density polyethylene	203	37	65	162*	— 12.0%
Polypropylene	106	18	28	96	+ 12.9%
ABS	37	4	1	40	— 20.0%
Polystyrene & styrene copolymers	110	34	10	134	— 2.2%
Polyvinyl chloride	190	29	31	188	— 2.6%
Polyester, unsaturated	27	2	2	24	— 20.0%
TOTAL	1,112	150	247	963*	— 4.0%
ESTIMATED TOTAL (ALL RESINS)	1,355	344	258	1,387	— 4.7%

* Difference due to an inventory increase of 96 tonnes for LDPE and 13 tonnes for HDPE in 1980.

Deepening auto recession is Story of Year for 1981

By John K. Teahen Jr.
Managing Editor

At long last, 1981 has ended. And not a moment too soon, as far as the domestic auto industry is concerned.

It was an awful year. *Another* awful year, because 1980 certainly was no prize either.

The unhappy state of affairs dominated the AUTOMOTIVE NEWS editorial staff's 29th annual Story of the Year poll. Just about every story mentioned was related to the troubles of the U. S. makers.

Voted Story of the Year for 1981 was the continuing recession/depression in the domestic auto industry.

In second place was the early campaign by General Motors and Ford Motor Co. to reduce labor costs in the 1982 contract with the UAW. It's something that wouldn't have happened in days of prosperity.

Third place went to the voluntary agreement by the Japanese makers to limit auto exports to the U. S. Once more, an event triggered by Detroit's troubles.

The fourth-place story was "sticker shock" — the buyer rebellion against the high, and ever-increasing prices of new domestic autos.

In fifth place was the era of deregulation that has begun under the Reagan Administration. Would there be deregulation if the industry were healthy?

• Looking at vehicle sales and the financial results of the U. S. auto firms, it's extremely difficult to find anything good to say about 1981. "Recession" is a mild term for what happened. "Depression" describes it better.

Domestic new-car sales were very poor, the worst since 1961. The year's total was about 6,240,000, down some 5 percent from 1980's 6,578,309. And 1980, itself was a disaster.

Of last year's 35 10-day sales periods through Dec. 20, 13 were ahead of 1980 and 22 were down. But the 13 "ups" don't mean much; they're a comparison of two rotten years. The 22 "downs" are a more telling statistic.

Five of the first 11 months (March, May, June, August, September) were better than in 1980, but, again, it's a comparison of weakness vs. weakness. August, fueled by rebates and GM's reduced interest rates, showed a 24-percent gain; the other improvements were 7 percent or less.

Only one 10-day sales record was set in 1981. That was in mid-March when GM's $500 and $700 rebates were at their peak. But the cost of that record was prohibitive. AUTOMOTIVE NEWS estimated that GM's sales for March 11-20 cost $85 million — $50 million for the corporation's share of the rebates and $35 million for its dealers' share.

The auto companies and their dealers poured hundreds of millions of dollars into rebates and incentives during the year. All that cash didn't boost the industry's sales, but maybe it kept things from getting even worse.

Chrysler Corp. ran counter to the industry trend, showing a 14-percent rise in car sales for the first 11 months. But, alas, it wasn't enough to keep the com-

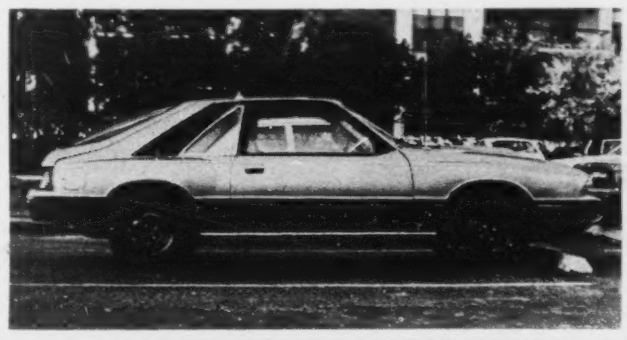
New faces at Ford

Mustang, Capri restyled for '83

Ford Mustang and Mercury Capri will receive a facelift and tail lamp change for the 1983 model year, as shown in these unofficial photos. The new Mustang nose is shown above. In addition, the Capri hatchback gets a bubble-back rear window, a la Mercury LN7. It is the first styling change for those cars since their introduction as all-new models in the '79 model year.



GM's McDonald to be keynoter for NADA

F. James McDonald, president of General Motors, will be the keynote speaker when the 65th annual NADA Convention & Exposition opens Feb. 20 in Atlanta.

The convention will run through Tuesday, Feb. 23, at the Georgia World Congress Center.

At the opening session on Saturday, Wendell H. Miller, 1981 president of NADA, will report on his term of office.

At the general session on Tuesday afternoon, Feb. 23, the incoming president, George W. Lyles, a Chevrolet and Rolls-Royce dealer in High Point, N. C., will accept the NADA gavel for 1982.

Also speaking at the Tuesday afternoon session will be Senator Paul Laxalt, Nevada Republican, and Paul Harvey, the commentator.

Time Magazine Quality Dealer Awards will be presented at the opening session on Saturday.

• On Tuesday, Feb. 23, at 7 p.m., NADA will host a Diamond Dinner and Reception in the Atlanta Hilton Grand Ballroom for DEAC contributors.

The Diamond Dinner and Reception will feature two musical aggregations, Tex Beneke and his Orchestra and Danny Davis and the Nashville Brass.

Although the convention does not officially open until Feb. 20, early registrations will begin at 1:30 p.m. on Feb. 19.

Registration desks also will be open from 8:30 a.m. until 6 p.m. on Saturday (Feb. 20); from 9 a.m. until 5 p.m. on Sunday and Monday and from 9 a.m. until 12:30 p.m. on Tuesday.

Workshops and make meetings will be held on Sunday, Monday and Tuesday. Workshops this year are organized into four areas of interest. They are Sales/Rental, Service/Parts/Body, Personnel/Management and Business/Money.

The workshop sessions will zero in on such areas as finding used vehicles, advertising tips, vehicle inventory control, starting a leasing company, developing service professionals, estate planning, preventing embezzlement, training sales personnel, computer talk, controlling expenses and corporate cash management.

Also, used-vehicle pricing, profits in daily rental, the AUTOCAP answer, daily operating control, understanding body language, dealership acquisition, hot legal topics, NADA Sales Trak, NADA service systems and analysis, financial statement analysis and LIFO implementation.

• The equipment exposition will be open from 8:30 a.m. until 2:45 p.m. on Saturday; from 11:30 a.m. until 5 p.m. on Sunday; 9 a.m. until 5 p.m. on Monday, and 9 a.m. until noon on Tuesday.

The Life Style Center will be open in the World Congress Center each day of the convention, with special attractions for women. Theme of the Life Style Center will be Springtime in Atlanta and the center will feature a sidewalk cafe, fortune tellers, artists, crafts and sports professionals.

At 3:30 p.m. Monday, Actress Polly Bergen will talk on "The Psychology of Being a Woman." Earlier that day, at 10 a.m., there will be a fashion show.

Service Index charts year's 2nd-biggest gain

By Francis J. Gawronski
Service Editor

With all indicators reporting in on the plus side, new-car service and parts business in November scored its second biggest increase of the year.

As measured by the Automotive News Service Index, service and parts volume in November amounted to 110.6 percent of the business recorded in the same month of 1980.

November's showing in the shops was the best since June when the Service Index was 116.6 percent of the volume recorded in the same month the year before.

November also marked the ninth consecutive month in which shop business bettered the volume done in the year-earlier month.

The leading indicator in November was gross profit on all labor, parts and P&A sales — the most important indicator from the dealers' viewpoint. It was up 17.8 percent for its best showing since June when profits were up 21.2 percent. In October, this indicator was up 8.5 percent.

Sales of all parts and P&A were up 12.1 percent in November, followed by shop parts sales (those used in customer-paid and warranty repairs), up 11.7 percent.

Total labor sales (customer-paid and warranty) were up 10.7 percent, while repair orders written were up 0.2 percent.

Figures used in the Service Index are averages compiled from reports on shop business from a cross-section of the nation's new-car dealers.

Service and parts business in

Pontiac eyes high-performance 1.8-liter

PONTIAC.—Pontiac is toying with a fuel-injected and turbocharged version of the Brazilian-built 1.8-liter overhead-cam four-cylinder engine that it will offer in the J2000 model —sans the extra performance hardware—this spring. The engine is strictly experimental, a Pontiac source said, but could show up in 1984-model J2000s if okayed by GM.

McCurry to head Toyota L.A. region

TORRANCE, Calif. — Robert B. McCurry has joined Toyota as general manager of the Los Angeles region, a new position. McCurry recently resigned as general manager of Mid-Atlantic Toyota, an independent distributorship that handles Toyota products in a five-state area. Before that, McCurry had served 28 years with Chrysler Corp. He took a voluntary retirement from Chrysler in 1978 as group vice president in charge of North American sales, parts and service.

Auto setback is less severe in Canada, report on pact says

WASHINGTON. — Auto production, sales and employment were down to a much greater extent in the U. S. than in Canada during calendar 1980, according to the just-issued 15th annual report to Congress on the working of the 1965 Auto Products Trade Act.

Under the 1965 agreement to rationalize auto production and trade between the U. S. and Canada, the U. S. gave duty-free treatment to certain vehicles and original-equipment parts for auto companies operating in Canada—the Big Four U. S. companies that had agreed to increase Canadian content in their production.

Total North American production in 1980 fell 28 percent from the 1979 level. U. S. production declined 30 percent and Canadian production only 16 percent. U. S. car production dropped 24 percent. U. S. truck production fell 46 percent. Canadian car production fell 14 percent. Canadian truck production fell 18 percent.

In the U. S., sales of overseas imports rose 3 percent to a record of 2.39 million. In Canada, sales of overseas imports rose 37 percent to 191,000.

The truck market was affected more severely than the car market. In the U. S., sales of North American trucks fell 33 percent in 1980 while sales of imports rose 4 percent. In Canada, sales of North American trucks dropped 19 percent while sales of imported trucks rose 75 percent.

The Big Four auto makers in 1980 spent $5.951 billion for new plant and equipment—up 7 percent from 1979. The Canadian share was a record $827 million, up 139 percent from 1979. Investment in the U. S. was $5.124 billion, down slightly from the 1979 peak of $5.203 billion.

In both countries, prices — both wholesale and retail—continued to rise. In the U. S. during 1980, the producer price index rose 8.4 percent from year-earlier levels for cars, 10.0 percent for trucks and 11.9 percent for parts.

In Canada, the industrial selling price index rose 12.4 percent for cars, 11.1 percent for trucks and 10.5 percent for parts.

In the U. S., the consumer price index for cars rose 8.0 percent, compared with a 7.9-percent rise recorded in 1979. In Canada, the consumer price index rose 11.8 percent compared with 12.1 percent in 1979.

In 1980, combined employment in both countrise dropped 22 percent below the 1979 level. The drop was much sharper in the U. S., whose share of total employment was 90 percent.

Vehicles and parts trade between the countries also reflected the state of the industry, dropping 12 percent from 1979 to $19.4 billion.

During 1980, U. S. auto products exports to Canada fell 14 percent, while corresponding Canadian exports to the U. S. declined 9 percent. The U. S. trade surplus was $1.75 billion, substantially below the $2.56 billion surplus of 1979. The U. S. surplus in duty-free auto products declined to $1.818 billion from $2.432 billion in 1979. The surplus in dutiable auto products dropped to $45 million in 1980 from $127 million in 1979.

Despite the sharp decline in total auto-products trade between the countries, the Canadian surplus in assembled vehicles rose $900 million. This was because U. S. vehicle exports to Canada dropped 18-percent while the value of U. S.-vehicle imports remained at the 1979 level.

Although the total parts trade for the U. S. and Canada declined 16 percent, the U. S. surplus in parts remained at almost the 1979 level.

U. S. shipments of auto products to Canada declined 14 percent; Canadian shipments declined 9 percent.

Ford's Hawaiian punch

Ford Dealers in Northern California, Southern Oregon and Western Nevada are running a "25 Fabulous Trips for 2" January promotion. On location in Hawaii for the commercial shoot are, from left, Bob Roat, account supervisor, J. Walter Thompson; John Allen, actor; Don Vaughn, JWT art director; Hugh Trenkamp, JWT management supervisor on the dealer account, and Madeline Press, actress. TV, radio, newspaper and point-of-purchase are included in the promotion.

Industry shuts down 29 plants this week

The Big Three U. S. auto makers are further juggling their January production schedules in response to continued sluggish new-car sales and bulging inventories.

As of today (Jan. 4), the Big Three will have 29 assembly plants closed. All but one of Ford Motor's 17 vehicle assembly plants and all five Chrysler Corp. car plants are closed this week to trim inventories.

Only Ford Wixom (Mich.) which builds Lincoln and Mark VI, will be open this week. St. Louis and the Lorain (O.) and Michigan (Wayne, Mich.) truck plants will resume operations Jan. 11. Other Ford car and truck points will remain down until Jan. 18, a Ford official said.

General Motors reported eight of its 32 vehicle assembly plants completely or partially closed this week. Down are Flint (Buick G-body line only) and GMAD Framingham, Lakewood, Linden, Tarrytown, Wilmington, Arlington and Janesville.

All except Janesville are closed for adjustment of new-car stocks. Janesville will be down for most of January for model changeover.

Arlington, Linden and Flint will reopen Jan. 11, but at that time GM will close its Baltimore, Fremont and South Gate plants. Baltimore and South Gate will reopen Jan. 18; Fremont will remain down that week. In addition, GM will close Lordstown (O.), beginning Jan. 18, for inventory adjustment.

Although all Chrysler Corp. assembly plants are closed this week, all but Newark (N. J.) will reopen next Monday (Jan. 11). Newark will remain down until Jan. 18.

Daihatsu to sell Innocenti in Common Market countries

TOKYO. — Daihatsu Motors, the Toyota affiliate, is to market Italian Innocenti cars in the European Common Market, the company has announced.

Daihatsu has already agreed to supply its three-cylinder 1-liter engine and transaxle to replace the much heavier BL A Series unit used previously in the Innocenti range of subcompact front-wheel-drive sedans.

Daihatsu started shipping engine/transaxles to Innocenti in Italy in September at the rate of about 4,000 units a month. Approximately 60 percent of the cars built with Daihatsu engines will be sold by Daihatsu dealers, the remainder going through the Innocenti network.

Since the Innocenti cars look completely different from the Daihatsu Charade, they are considered to be complementary to the Charade and Cuore models. The Innocenti Mini is based on the mechanical units and floorpan of the BL Mini, the new body having been designed when BL was manufacturing in Italy.

Now Innocenti is moving away from BL, and the implications are that in future, the links between the Italian and Japanese company will be much closer.

For example, at the Tokyo Motor Show, Daihatsu showed a 'de Tomaso Turbo' version of the Charade, de Tomaso being the man who owns the Innocenti operation.

With a turbocharger and sporty bolt-on parts, this show special was intended to help give Daihatsu a more sporty image.

SERVICE INDEX
110.6*

	Nov., '81 vs. Nov., '80	11 mos., '81 vs. 11 mos., '80
Gross Profit on All Labor and P&A Sales	+17.8%	+ 9.7%
Repair Orders Written	+ 0.2%	— 3.3%
Total Labor Sales (Customer & Warranty)	+10.7%	+ 3.5%
Shop Parts Sales (Customer & Warranty)	+11.7%	+ 6.4%
Sales of All P&A	+12.1%	+ 8.6%

*—Survey by Automotive News shows that dealers' service and parts business in Nov., 1981, was 110.6 percent of business in Nov., 1980. Service business in the three months of 1981 was 105.4 percent of business in the corresponding period in 1980.

Service Index charts year's 2nd biggest gain

Continued from Page 1

the first 11 months of 1981 amounted to 105.4 percent of the volume recorded in the same period a year ago. Shop business in the 10-month period was up 105.0 percent.

Gross profit was the leading indicator in the January-November period, up 9.7 percent, followed by sales of all parts and P&A, up 8.6 percent, and shop parts sales, up 6.4 percent.

Labor sales were up 3.5 percent for the period, while repair orders written dipped 3.3 percent.

Mid-month car sales scantiest since 1959

By Jenny L. King
Staff Writer

Domestic new-car sales in mid-December remained at basement levels, further widening the year-to-date gap between 1981 and 1980 and scoring the worst daily sales average of the year.

Dec. 11-20 sales totaled 104,754, down 31.23 percent from 152,316 a year ago. It was lowest for the pre-holiday period since the 99,869 recorded back in 1959. The mid-December record is 256,981 in 1972.

The year-to-date figure finally pushed over the 6-million mark, to 6,079,698, 5.51 percent below the 6,434,081 tallied through Dec. 20, 1980.

The daily sales rate for the eight days in the period was just 13,094, lowest for the year to date and down 22.63 percent from 16,924 for nine days a year earlier.

All five major U. S. auto makers were down in the period, both on year-to-year comparisons and on a daily-rate scale. General Motors was down 24.01 percent, to 64,718 from 85,162 in 1980 (down 14.50 percent daily rate). Ford Motor Co. reported sales of 20,942 units, down 48.14 percent from 40,380 (down 41.65 percent daily rate).

Chrysler Corp. sales of 14,309 were down 26.73 percent from 19,529 a year earlier (down 17.55 percent daily rate). Volkswagen of America slipped 24.96 percent, to 2,585 from 3,445 (down 15.61 percent daily rate), and estimated American Motors sales of 2,200 new passenger cars were down 42.11 percent from 3,800 (down 34.89 percent daily rate).

DOMESTIC SALES

	Dec. 11-20, 1981	Dec. 11-20, 1980
AMERICAN MOTORS	2,200	3,800
Chrysler	2,704	3,863
Imperial	72	199
Plymouth	5,700	7,821
Dodge	5,833	7,646
CHRYSLER CORP.	14,309	19,529
Ford	14,259	27,356
Mercury	5,367	11,082
Lincoln	1,316	1,942
FORD MOTOR	20,942	40,380
Buick	13,654	12,023
Cadillac	5,064	5,964
Chevrolet	22,940	36,108
Oldsmobile	14,189	18,048
Pontiac	7,871	13,019
GENERAL MOTORS	64,718	85,162
VOLKSWAGEN	2,585	3,445
INDUSTRY TOTAL	104,754	152,316

†Estimate

• GM earned 61.78 percent of the mid-month market, up from 55.91 percent a year earlier. Ford dropped down to 19.99 percent from 26.51 percent. Chrysler inched to 13.66 percent from 12.82 percent, VWoA cornered 2.47 percent compared with 2.26 percent and AMC slipped to 2.10 percent from 2.50 percent.

Buick and Cadillac were the only U. S. makes to sell more cars than in the year-ago period. Buick was up 13.57 percent, to 13,654 from 12,023, and Cadillac was up 1.68 percent, to 6,064 from 5,964.

GM's other makes fared poorly: Pontiac was down 39.54 percent, Chevrolet was down 36.47 percent and Oldsmobile was down 21.94 percent.

Chrysler was down 30.00 percent, Imperial was down 63.82 percent, Plymouth was down 27.12 percent and Dodge was down 23.71 percent.

Ford sales dropped 47.88 percent, Mercury was down 51.57 percent and Lincoln was down 32.23 percent.

The number-one selling nameplate for the period was Oldsmobile Cutlass (including Supreme) at 5,885 units.

Georgia dealers spurn Hawaii

ATLANTA.—The Georgia Automobile Dealers Assn. has withdrawn from the five-state dealer convention scheduled March 15-22 in Hawaii.

Instead, tentative plans have been arranged for the convention to be held at Innisbrook, Tarpon Springs, Fla., March 28-April 1.

The other states scheduled for the Hawaiian affair are Kentucky, Missouri, Illinois and New Mexico.

State capitol roundup

'Legislative attention' centers on vehicles

By Mary E. Jones
Special Correspondent

In 1981, over 20 perecnt of the 100,000 bills which were introduced in state legislatures related to the motor vehicle industry.

The percentage is even higher if workers compensation, unemployment compensation and insurance bills are added to the list.

According to Donald J. Hill, assistant vice president of Commerce Clearing House, Inc., bills affecting motor vehicles have traditionally been one of the most consistent areas of legislative review over the past few decades. Other areas of intense legislative scrutiny by volume include the insurance industry and all types of taxation.

Motor-vehicle-related areas which are expected to receive legislative attention in 1982 include the following: Manufacturer/dealer franchise relationship, provisions of warranty contracts, mandatory use of child restraints and seat belts, liberalization of truck size and weight limits and mandatory equipment found on the vehicle.

Other areas are: Emissions of pollutants from motor vehicles, mandatory emissions and safety inspection, transportation of hazardous waste, motor fuel and motor vehicle taxes, increased registration fees and effect of plant closing on local economy.

Forty-three states are scheduled to meet in 1982. Only Arkansas, Montana, Nevada, New Hampshire, North Dakota, Oregon and Texas are not currently scheduled to meet. Twenty-two of these states will carry over pending 1981 legislation for reconsideration in 1982.

Factors such as a state's economic condition and political balance have an immense relationship to a bill's potential for passage. Industry observers are also watching to see what influence the Reagan Administration's attitude on reduced government regulation of business will have on proposed state legislation.

It is also unknown how proposed cutbacks in federal government spending, a traditional source of revenue for the states, will affect various state programs.

Students of legislative history observe that most issues addressed by federal law were first considered at the state level. These include laws on such issues as fuel economy, air pollution and consumer protection.

Third generation signs

John Poppel Jr., seated, has been appointed a Toyota dealer in Columbia, Mo. He is pictured with his grandfather, Tyson Poppel, chairman of Tyson Buick, Fort Worth, and his father, John Poppel Sr., president of Wellesley Toyota, Wellesley, Mass.

Strategy behind Mitsubishi deal

Hyundai eyes an expanding market

By John Hartley
Staff Correspondent

TOKYO. — In a bid to survive by gaining economy of scale, Hyundai Motors, Seoul, Korea, has negotiated a technology transfer deal with Mitsubishi Motors Corp. (MMC) of Japan.

The plan is to build a factory capable of producing 300,000 front-wheel-drive cars a year in the mid-to-late 1980s.

This will treble Hyundai's capacity, and will give MMC more influence in Korea — one more leg in the Japanese company's ambitious plan to dominate Southeast Asia in terms of motor manufacture.

After rapid growth in the mid-1970s, Korea's auto industry went into a real slump, sales falling by about 30 percent from the peak of 200,000 in 1979.

The slump resulted from high inflation and taxes which reduced domestic demand before the autos were good enough for widespread exports.

The biggest auto company is Hyundai, built from nothing under the guidance of George Turnbull, former BL executive, and now chief of Talbot UK.

Hyundai, part of one of the biggest Korean industrial groups, commissioned Ital Design to design the body of the Pony small car, and bought a license from MMC for engine and transmission designs — the engines are 74 and 85 cubic inches.

Based on a 92-inch wheelbase, the Pony is 156 inches long, and is produced in four-door sedan, hatchback and station wagon form. There is also a small pickup truck.

Hyundai started producing the Pony in 1975, and also makes trucks under license from MMC. Total vehicle production capacity is 140,000 units, the main factory at Ulsan having a capacity of 116,000 passenger cars.

In 1979, some 75,000 passenger cars and 35,000 trucks and buses were produced, but this fell to 62,000 units in 1980.

It is anticipated that 1981 output will be finalized at 78,000— 62,000 passenger cars, and 16,000 trucks and buses. Exports account for about 25,000 cars.

Hyundai's competitors are Saehan Motors, half-owned by GM, and Kia, which has a licensing deal with Toyo Kogyo. Last year, the Korean Government tried to merge Hyundai and Saehan but this proved unsuccessful. Saehan has capacity for 73,000 cars — Isuzu's version of the GM T-car, the Gemini, and the Opel Rekord — and 37,000 trucks and buses of Isuzu design.

Saehan is integrated to some extent into GM's world strategy, and is scheduled to supply GM Australia with diesel engines, these being the Opel units.

It is also expected to build the GM J-car in due course, but at present is working well below capacity, as is Kia, which builds the Mazda GLC of two models ago — a very old-fashioned design.

All the Korean companies are keen to modernize and improve the level of their technology, and Hyundai has chosen MMC as its partner, presumably because it had previous experience of working with the Japanese company.

Under the deal, MMC will supply technical help in manufacture and design of engines and transaxles for front-wheel-drive cars and also exhaust emission equipment.

It has not been confirmed

Continued on Page 35, Col. 3

Hatchback from Hyundai

Hyundai Pony boasts a hatchback body styled by Ital Design and an engine and transmission built under license from Mitsubishi. The main factory has an annual capacity of 116,000 passenger cars, but the company hopes to hike this to 300,000 in the mid-to-late 1980s.

Longbottom, Neal Paxson named to NADA posts

McLEAN, Va. — NADA has announced three staff appointments.

Penelope Longbottom has been named director of media and consumer affairs; David S. Paxson has been appointed director of the NADA American Truck Dealers Division, and Jack C. Neal has been named head of the NADA Publications Policy Board.

Longbottom has been with NADA since 1977, most recently as press secretary. Before that, she headed the Automotive Consumer Action Program (AUTOCAP). In her new post, she will again be responsible for AUTOCAP expansion and development.

Paxson formerly was manager of the competitive analysis section of the Assn. of American Railroads. At NADA, he will be responsible for expansion of the 1,500 - truck - member division. Under his direction, ATD will analyze economic events affecting the sales and demand for medium and heavy-duty trucks.

Neal has been with NADA since 1970. In addition to his new duties, he will continue as executive director of the Automobility Foundation, a nonprofit organization supported by auto dealers and manufacturers to promote personal mobility by motor vehicle.

Illinois to sell bonds to help Chrysler survive

SPRINGFIELD, Ill. — Bonds amounting to $20 million are to be offered for sale so that the amount pledged to Chrysler Corp. by the State of Illinois can be paid to the corporation.

Gov. James R. Thompson and State Treasurer Jerome Cosentino said the pledge was made when Chrysler put together its loan guarantee package. The State legislature passed an appropriation for $20 million, but the governor never signed the papers. The approval by the General Assembly lapsed on June 30.

Now bonds will be sold by the Industrial Development Authority. Thompson explained that his action was planned to assure that the Belvidere (Ill.) Chrysler plant continues to operate.

Thompson said the loan would earn more interest than the state would get by putting the money in banks. Chrysler eventually will have to pay $1.32 million in interest over the life of the loan, it has been estimated.

The Chrysler plant, worth $50 million, is being put up as collateral. The minimum interest rate on the loan will be 15¾ percent, but it could rise if the prime rate does.

SBA backing of dealer loans rises for year

WASHINGTON.—Times were tough a year ago and the Carter Administration took time to hold an auto summit.

All kinds of specific proposals were made, but Congress never enacted them.

What did happen, however, was important to dealers.

During fiscal 1980, the Small Business Administration backed 1,136 dealer loans worth $223.3 million. During fiscal 1981, 1,303 loans worth $261.5 million were backed by SBA, and there is some evidence that the government backing helped loosen bank credit for dealers.

Particulate standard not warranted now, Academy study says

Go slow on diesel rule, EPA told

By Jake Kelderman
Washington Bureau Staff

WASHINGTON.—A new study by the National Academy of Sciences suggests the EPA might take a new approach to regulating particulate emissions from diesels.

The academy, which had been asked to look into the problems of dieselization in the U. S., suggests in a study to be sent to EPA, the White House Office of Science and Technology Policy, and the Departments of Transportation and Energy that EPA postpone the 1985 diesel particulate standard for light - duty vehicles pending further developments in diesel technology and that it give serious consideration to controlling particulate emissions from heavy-duty diesels imposing stricter nitrogen oxide controls on gasoline-powered vehicles and setting minimum specifications for diesel fuels.

The academy report says the 1985 particulate standard of 0.2 grams per mile is not warranted now because it is not cost-effective. "Only a relatively small number of diesel-powered cars will be made and sold in the

U. S. Circuit Court rules against state

Leasing industry wins tax battle in California

By Francis J. Gawronski

The Ninth U. S. Circuit Court in San Francisco has ruled against the State of California and in favor of the vehicle leasing industry in a long-standing controversy on the application of sales taxes.

The California Franchise Tax Board has long irritated leasing company executives by its insistence that a lease of "tangible personal property" to a federal government agency was subject to the state's sales tax and that dealers who enter into such leases should be audited as well as taxed.

The federal court, however, has now ruled that the incidence of the tax is on the U. S. and is in violation of the immunity from state taxation which the U. S. Constitution grants to the federal government.

Stephen F. Snow, executive vice president, Northern California Motor Car Dealers Assn., is now urging members and lessors who have paid the tax, under protest, to file claims for refunds.

"Such claims," Snow said, "generally must be filed within three years from the due date of the return on which the tax was paid or six months from the due date of any deficiency assessed by the tax board.

"However," Snow said, "if the state appeals this court decision, dealers filing claims should also consider asking that the tax board hold their claims in abeyance pending the outcome of such an appeal."

Elsewhere in the leasing industry, Associates Leasing, Inc., Rolling Meadows, Ill., a division of Associates Commercial Corp., has purchased the corporate fleet leasing accounts of Dobbs Fleet Leasing, Inc., Memphis.

The acquisition brings the total number of cars under lease with Associates to more than 10,000 nationwide, and the number of trucks to more than 3,000 units.

Dobbs Leasing, which maintained four regional offices in the Midwest, Southwest and West, will continue its fleet operations in Memphis on a regional basis. Associates Leasing operates five regional offices nationwide, in addition to its Chicago-area headquarters.

The California Vehicle Leasing Assn., Los Angeles, has changed its name to Western Vehicle Leasing Assn. (WVLA).

"The change signifies the dramatic growth which is occuring in the leasing industry at present," said Bruce Williams of Snider Leasing, Sacramento, and WVLA president.

"We, as a group, feel that the association should grow and change with the times and that dealers, independents, brokers and bankers can all share the benefits of belonging."

Tom Halpin has been named director of fleet management services at Wheels, Inc., Chicago.

With nearly nine years' experience at Wheels, Halpin has assumed responsibility for supervision and coordination of programs for maintenance management, reimbursement and statistical reporting.

The following personnel changes have occurred within the Truck Rental and Leasing Division, Lend Lease, Minneapolis:

Edward Priest has joined the company as business manager in Miami; Royal Myers has been named rental manager in Sacramento; Charlie Allen has been appointed assistant manager in Orlando, Fla., and Sandra Huffman has been promoted to rental manager in Baltimore.

Ford steel mill to get relief on pollution rule

WASHINGTON. — Ford Motor Co. will be among the first of the nation's steel companies to get relief from air pollution control requirements under legislation passed by Congress.

EPA Administrator Anne Gorsuch said recently the firm's Rouge River steel plant will be given until 1985 to meet air-pollution requirements that will force the company to spend some $10.5 million in modernizing the plant's No. 2 Tandem Mill and its pickle lines. The original compliance deadline was 1982.

The stretchout for compliance was authorized by Congress in recognition of the steel industry's precarious financial condition and its need to become competitive with foreign producers.

Speed controls also gain favor on '81 models

Buyers tilting toward tilt wheels

By Joseph Bohn
Marketing Editor

Tilt wheel, tilt and telescope and speed control options continued to gain popularity on '81 domestic cars, according to an AUTOMOTIVE NEWS survey.

Some observers feel that tilt wheel is well suited to smaller cars because it facilitates driver entry and exit, and that it will continue gaining acceptance on those autos.

The combination tilt and telescope, however, appears to have a limited future, being confined mainly to higher-priced or larger cars. General Motors is the only company still offering this combination.

Speed controls improved their penetration, and the slow, albeit steady, growth which has characterized them.

Industrywide, there were 2,806,567 tilt and tilt and telescope options installed in '81 models, up from 2,493,126 in '80. Penetration increased to 41.53 percent from 34.89 percent in '80.

• A breakdown shows that tilt wheel alone went into 2,486,775 cars, equal to 36.80 percent of production. It was up at Ford Motor and General Motors, down at Chrysler and American Motors. Volkswagen doesn't offer tilt wheel.

No exact breakdown of tilt wheel versus tilt and telescope was made in previous years. However, AMC, Ford and Chrysler offered only tilt wheel in '80 and '81.

And year-to-year comparison indicate that AMC's installations dropped to 30.30 percent of output, equal to 41,584 units. That was down from 31.31 percent, or 61,947 in '80.

Chrysler's installations dropped to 97,765, or 13.33 percent of output. That was off from 112,908, or 14.75 percent in '80.

Ford Motor's installations jumped to 376,421, or 25.03 percent of company output. That was up from 283,886, or 20.67 percent.

General Motors installed tilt wheel on 1,971,041 cars, equal to 46.88 percent of its production. Additionally, it installed tilt and telescope on 319,792 cars, or 7.61 percent of output.

The combined GM installations of 2,290,833, or 54.49 percent, compared with 2,034,385 adjustable steering columns, equal to 44.37 percent of GM output, installed in '80 models.

• Speed controls, or Cruise Control, ended up on 37.27 percent of the '81 domestic cars, or 2,518,705 vehicles. That was up from 31.99 percent, or 2,286,091 in '80.

GM's penetration climbed to 43.79 percent from 36.67 percent in '80. GM made the option available on its J-series (Cavalier / J-200 / Cimarron) which helped boost the '81 total.

(The cars, officially on sale as '82s, were late '81 model production entries.)

Altogether, GM installed Cruise Control in 1,841,018 cars, up from 1,681,497 in '80.

Ford Motor installed the speed control device in 34.13 percent of its cars, equal to 513,225 vehicles. That was up from a 29.44 percent penetration, or 404,439 vehicles in '80.

Ford, too, made the option newly available on Escort, Lynx, EXP, LN7 and Capri.

Chrysler installed the option in 20.04 percent of its cars, equal to 146,971 units. That was down from 22.28 percent, or 171,261 in '80.

AMC installed the item in 12.76 percent of its cars, equal to 17,491 units. That was off from 14.60 percent, or 28,894 in '80.

Volkswagen doesn't offer the option.

1980 traffic deaths steady at 45,000

WASHINGTON. — Traffic fatalities in 1980 totaled 45,271 — virtually unchanged from the 45,212 recorded in 1979, DOT reported in a new release. Pedestrian deaths (15.8 percent of the '80 total) and motorcycle deaths (10.0 percent) were included in the total.

The fatality rate per mile rose 1.2 percent over the 1979 level, to 3.38 deaths per 100 million miles. Of the total, 27,433 deaths were occupants of cars. The autos involved in these deaths broke down as follows: Two-seaters, 4 percent; subcompact, 26 percent; compacts, 22 percent; midsize, 21 percent; fullsize, 25 percent, and unknown/other, 2 percent.

Total Cars, U. S.	2,486,775	36.80	319,792	4.73	2,518,705	37.27

Note: Figures are generally based on U. S. production. However, Canadian-only sourced cars, such as Cordoba-Mirada, are included in some instances; also, some '82-only models, such as EXP/LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,513 Chrysler models, 137,125 AMC and 179,635 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,673,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouths and 311,988 Dodges.

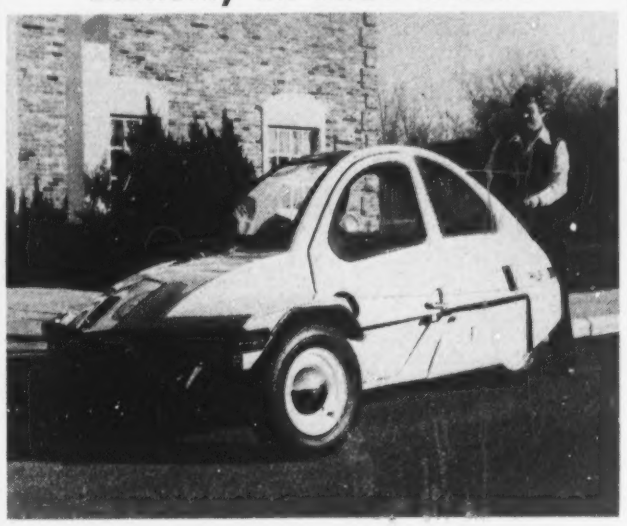
Economy on three wheels



100-MPG commuter from Minnesota

H-M Vehicles, Burnsville, Minn., claims 100 MPG for its Free-Way III powered with a 345-cc single-cylinder engine. Classified as a motorcycle, the Free-Way has automatic transmission, fiberglass body, heater, tubular steel frame around the vehicle at normal bumper height, three-point belts and a cargo area big enough for a temporary passenger. Top speed is said to be 65 MPH. A 453-cc gasoline engine, diesel engine and electric powerplant also are offered. Prices start at $3,695, FOB Minneapolis.

Early Ford contract talks scheduled to begin today

By Marjorie Sorge
Labor Editor

The UAW and Ford Motor Co. are scheduled to begin early contract talks today (Jan. 11), according to sources.

Last week, the UAW made reservations at the Fairlane Inn in Dearborn for its out-of-town negotiators beginning yesterday (Jan. 10) and running indefinitely, according to the Detroit News. The reservations were made before the 250-member UAW national Ford Council officially voted to begin early negotiations.

The current contracts with Ford and General Motors expire Sept. 14, 1982. At presstime, both the union's Ford and GM councils were scheduled to vote on early talks at separate meetings in Chicago last Friday (Jan. 8). The union's bargaining committees have already recommended early bargaining based on the economic situation in the auto industry.

No information was available on when talks with GM might begin if the council gives its OK.

• Most observers feel the Ford Council will vote to begin early bargaining. Four UAW Ford locals have already voted to accept work rule concessions to be more competitive in bidding for Ford jobs. This may have softened the feelings of the union's Ford membership.

The GM Council's reaction, however, is questionable. Last week worker's at Oldsmobile's main production facility in Lansing voted 95 percent against granting contract concessions and told their union leaders to fight reopening current contracts.

But, according to Gary Watson, president of Local 652, the membership is not against early negotiations, only against reopening the current contract and giving concessions. That local represents 14,000 UAW members and 4,000 voted.

Other GM locals also have indicated they are against reopening the agreement and giving concessions and some are against early negotiations. One union insider said the rank-and-file are upset because the union's Collective Bargaining Convention has not been held and they have not had a chance to submit resolutions for negotiating guidelines. That convention is scheduled in early March.

• While it is possible either the Ford or GM Council could reject early bargaining, Donald Ephlin, vice president and director of the union's Ford Department, has said it is unlikely the two councils would split on whether to open talks early. He said it is advantageous to both the companies and the union to keep the timing of the Ford and GM contracts together.

One union insider said it is believed the early bargaining plan will "squeak through" the GM council.

When negotiations begin, job security will be the UAW's Number One demand. According to Ephlin, one way to insure jobs is to demand a labor-content plan. He said that every job exported by a U. S. auto company must be replaced by an imported job from one of that firm's overseas subsidiaries.

The UAW also wants a commitment for no layoffs in the auto industry, Ephlin has said. To accomplish this, the union might consider hiring two types of workers — temporary employes who would be laid off in the event of a slump and permanent workers who would always be assured of a job, Ephlin said.

Such a plan would require less stringent lines of demarcation and seniority programs. But, Ephlin said, the promise of

EPA's staff cut viewed as threat to its survival

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The number of people working in Washing for the EPA, approximately 5,298 when President Reagan took office, could be as low as 2,085 by June of this year under a reorganization planned by EPA Administrator Anne Gorsuch.

That would represent a slash of more than 60 percent.

An organization known as "Save EPA" says that action will effectively cripple the agency's efforts to fight pollution.

"This means the end of the agency," said William Drayton, EPA's chief budget officer during the Carter Administration.

EPA has been a major target of the Reagan Administration's anti-regulatory effort since the President took office, it has been at the center of the controversy over the Administration's perceived anti-environment stance.

Environmentalists and Congressmen have decried the appointment of numerous persons to positions they had formerly been regulated by and the ready willingness of the new administration to listen to and do as industry wants.

This change in attitude has already caused 913 headquarters personnel to quit the agency, Drayton said.

"They have set out to tear the EPA apart in order to get it off the backs of business," Drayton said, adding that it is a backdoor way of getting rid of the environmental regulations.

• By cutting the EPA budget by almost 50 percent and the staff by an even greater percentage just as the agency's workload is doubling because Congress has required it to control environmental toxics as well as traditional pollutants, the administration has de facto nullified "the clean air, clean water, toxic substance, hazardous wastes, pesticides, safe drinking water and other environmental laws Congress has enacted with overwhelming bipartisan support over a decade," Drayton said.

"The Administration's actions make a mockery of Congressional debate over these laws," he added.

EPA officials said Drayton's figures were inflated, but did not deny that Gorsuch is reorganizing the agency.

Others, who asked not to be identified, said 700 to 800 people in the Washington office, which

breaking news

New Nissan named Sentra for U. S.

LOS ANGELES. — Nissan's replacement for the Datsun 210 in the U. S. market will be called Nissan Sentra. It was introduced in Japan as the Sunny. The Sentra is expected to be launched in the U. S. about May 1.

Chrysler boosts some prices $230 to $498

DETROIT.—Chrysler Corp. has raised sticker prices $230 to $498 on some of its subcompact and compact models. The base Aries/Reliant four-door sedan now is $6,629, up $498, and the Omni/Horizon Custom four-door sedan is $6,311, up $384. These are among the models on which Chrysler held the price line when the '82s were introduced. The Plymouth TC3 Turismo hatchback coupe and Dodge Charger 2.2 hatchback coupe have been hiked $230 and now are $7,345. They are new models for '82.

DeLorean postpones holding company stock issue

WASHINGTON.—DeLorean Motor Co. and its lead underwriter Bache Halsey Stuart have postponed the initial offering of one million stock-plus-warrant units which would have created DeLorean Motors Holding Co. A DMC spokes-

To take advantage of production in U. S.

Honda expanding dealer network

By John A. Russell
New York Staff Writer

NEW YORK. — As American Honda's plant in Marysville, O., takes shape, the company is slowly expanding its dealer network to 1,000 dealers from approximately 800 to take advantage of production in the U. S.

The plant will open in the fall and will supply a maximum of 50,000 units in the U. S. market when fully operational. The dealer network is being expanded to take advantage of the added product of the plant but not at the expense of the current dealer body, Honda said.

Honda's progress on the plant is on schedule, according to Tetsuo Chino, president and general manager of American Honda. And while the auto industry in general in the U. S. is undergoing cataclysmic changes, Honda is weathering the storm without impact, he said.

The major issues confronting the U. S. auto industry, besides sales — quality and productivity — are not of concern to Honda, he said. He said much has been written comparing Japanese workers with American workers with various studies indicating the Japanese worker is better, yet he and his colleagues do not accept these conclusions.

"We avoid stereotype concepts," Chino said, adding that there is no master key to productivity and quality control, but only an accumulation of daily details. Those are "small minor details" that let people realize how important quality control and teamwork are in the overall picture of the company.

He stressed that the key is labor and management understanding each other and that Honda attempts to close the understanding gap.

Honda's concept of the marketplace has been more worldwide in scope than that of its competitors. This stems from a philosophy advocated when the

Dismal '81: U.S. sales lowest in 20 years; import share up

By Jenny L. King
Staff Writer

New-car sales in the U. S. in 1981 fell for the third consecutive year despite increasing numbers of front-drive, fuel efficient cars from the anxious domestic auto makers, wave after wave of rebates, credit assistance programs and incentives to buy and restrictions accepted by the Japanese competitors.

The domestic industry posted its lowest calendar-year total since 1961. Import sales were off from the 1980 level, but scooped a record 27.25 percent of the total market.

The combined total was 8,531,531, down 4.92 percent from 8,973,345 in 1980.

The five major U. S. auto makers sold 6,206,296 units, down 5.65 percent from the year-ago 6,578,275. It was the lowest total since 6,142,402 back in 1961. Best year for the domestics was 1973 when 9,669,689 new cars were retailed.

The daily selling rate for 1981 was 20,216, down 5.35 percent from 21,358 in 1980. There were 307 selling days in '81 compared with 308 in 1980.

Imported-car sales totaled 2,325,235 for the year, down 2.92 percent from the record 2,395,070 sold in 1980. Import penetration was 27.25 percent, smashing the 1980 record of 26.69 percent. The import segment of the market has climbed steadily, from 17.69 percent in 1978, and 21.85 percent in 1979.

Chrysler Corp. was the only U. S. auto maker to report a sales increase for the year. The rebounding company was up 10.58 percent in 1981, its sales totaling 729,873 compared with 660,017 a year earlier.

General Motors sales dropped 7.77 percent, to 3,796,696 from 4,116,482. Ford Motor Co. was down 6.41 percent, to 1,380,600 from 1,475,232. American Motors was down 8.54 percent, to 136,682 from 149,438, and Volkswagen of America retailed 162,445 U. S.-built Rabbits, down 8.28 percent from 177,106.

GM slipped to 61.17 percent of the domestic market from 62.58 percent in 1980. Ford stood at 22.25 percent, compared with 22.43 percent the preceding year. Chrysler gained 1.73 percentage points, climbing to 11.76 percent from 10.03 percent. AMC earned 2.20 percent of the domestic market, down from 2.27 percent, and VWoA cornered 2.62 percent, down from 2.69 percent.

Chrysler Corp.'s Plymouth and Dodge makes both reported substantial gains in 1981, Ford's Mercury was up, and three of GM's divisions—Cadillac, Oldsmobile and Buick—improved their lot during a dreary sales year. Chrysler's Imperial was up 86.18 percent, but this compared 12 months in 1981 with three months on the market in 1980.

Plymouth sales were up 29.56 percent, to 325,598 from 251,312 in 1980. Dodge was up 14.75 percent, to 305,757 from 266,460. Mercury dealers sold 339,550 units, up 2.63 percent over 330,853.

Cadillac sales were up 8.29 percent, to 230,665 from 213,002. Oldsmobile was up 3.42 percent, to 848,739 from 820,681, and Buick squeaked by its 1980 total by 0.31 percent, to 722,617 from 720,368.

On the minus side for the year: Chrysler was down 32.83 percent; Ford was down 9.07 percent; Lincoln was down 8.43 percent; Chevrolet was down 17.37 percent, and Pontiac was down 10.16 percent.

• Two new import companies entered the U. S. automotive marathon in 1981: Isuzu from Japan and DeLorean from Ireland. Of the 26 imported makes on the chart for 1980 and 1981, 13 were up in comparative sales, and several reported records as well.

Import leader Toyota, second-place Datsun and third-place Honda showed signs of feeling the Japanese import restrictions. Toyota sales were down 0.98 percent, Datsun was off 10.08 percent and Honda slipped back 1.25 percent.

Fourth-place Mazda was up 2.77 percent in 1981, and number-five Subaru was up 6.36 percent with record sales of 152,062.

Peugeot reported the greatest sales increase of any import for 1981: Up 30.99 percent to 16,937 from 12,930. Audi sales were up

A Brazilian offering

This Ventura SLE, made in Sao Bernardo do Campo, Brazil, features a fiberglass body and Volkswagen mechanicals. It is available with either the air-cooled or water-cooled 1.6-liter VW engine. Several other Brazilian-built specials are based on VW running gear.

The older the car, the higher the payment

AMC to pay $300-$500 for tradeins

By Joseph Bohn
Marketing Editor

SOUTHFIELD, Mich.—American Motors' latest promotion is expected to round up quite a few used cars for its dealers as well as selling off new ones on their lots.

Essentially, AMC is paying tradein "bonuses," tantamount to rebates on used cars. The older the car, the bigger the payment.

The program, which runs from Jan. 14 to March 31, pays direct-from-the-factory or use-it-as-a-downpayment bonuses of $300 for any '77 or '78 model, $400 on a '75 or '76 model and $500 on a '74 or older model traded in purchase of a new Concord, Spirit or Eagle. The factory pays the full amount.

The program is being pitched to consumers on the basis that by unloading their old, older or oldest car, they save money on maintenance and gasoline costs and get more for their tradein to boot.

Dealers get the extra benefit of tradeins during a period when people are hanging onto their cars and clean used cars are hard to come by.

AMC has "accelerated" its promotional spending in the first quarter, with heavier network TV, magazine, newspaper and direct mail, to support the effort, said David J. Van Peursem, general marketing manager.

Eagle will continue to be advertised in straight product commercials, but Spirit and Concord advertising will shift completely to the new spots during the program's time frame.

Van Peursem did not anticipate having any new incentives on Renault products, which he said were priced and positioned right.

The Jeep line still remains a question mark, he added.

• AMC is introducing its latest promotion via 1,200-line newspaper ads, breaking in the top 100 markets Jan. 13 and 14.

Another newspaper campaign of like size will follow approximately a week later.

Single page, black and white magazine ads break in news weeklies during the promotion.

AMC has also made a fairly heavy network TV scatter buy. It will be running about four times as much network as spot, which is a reversal of what it has been doing the past couple of quarters.

TV and magazine ads have a humorous flavor. They feature a caricatured gas attendant filling up a fin-tailed guzzler with lines like, "If your car was built when gas cost 60 cents, you're in trouble" and it's only a race for "which will give out first—your old car or your money."

AMC is supplying dealers with direct-mail pieces for their prospective customers. The direct mail is devised so a customer can figure his own tradein bonus, yearly gasoline and maintenance savings, etc.—and present it filled out for a ready deal at dealerships.

AMC is sharing half the cost of the direct-mail pieces, expected to number several hundred thousand, with its dealers.

Van Puersem anticipated about 95 percent dealer participation in the promotion.

Both AMC agencies, Compton Advertising, which handles Eagle, and Grey Advirtising, which handles Concord and Spirit, participated in the campaign.

Ford told to account for funds that dealers never got

FDA wants floor-plan disclosure

By John A. Russell
New York Staff Writer

HACKENSACK, N. J. — The Ford Dealers Alliance is demanding a full accounting of funds not returned to dealers under the floor-plan assistance program which took effect last October, calling the program, which since has been revised, more of a money-making scheme for the company than a true assistance program.

Ford Motor Co. has announced a new program will take effect Jan. 18. It will have an option of a full reimbursement of the 35-day finance charge. But it is the old program, which runs until that date, which has many dealers, including FDA President Ed Mullane, up in arms.

Mullane said that when the current program took effect, dealers were under the impression that the finance charge, which was tagged onto the dealer price for the car, would be returned in full. Now, as these credits are being returned, dealers are finding this is not the case.

After the program was announced and put into place, Ford attempted to set the record straight, but it was not enough. On Dec. 2, FDA sent out a survey form to all Ford and Lincoln-Mercury dealers.

This survey asked dealers whether they understood the program, wanted to see it continued, wanted to see it discontinued or wanted to see it reconstructed to give the dealers back the full money immediately.

To date, the FDA has received 794 responses. Seventy percent said they did not understand the program and 84 percent wanted it reconstructed. Only six responding dealers liked the program, according to the FDA.

In announcing the 1982 pro-

U. S. beefs up position on safety exemptions

WASHINGTON. — One of the final 1981 actions taken by NHTSA Chief Raymond A. Peck was to strengthen and clarify the federal government's position on federal preemption and pre-sale state enforcement of safety standards.

The interpretation, issued at the request of the Truck Equipment Safety Institute and the Safety Helmet Council of America, impacts directly a Louisiana law that was set to become effective at the start of 1982.

The immediate issue that Peck addressed was the approval requirement for motorcycle helmets. The Louisiana law says that in 1982, a helmet may not be made, sold, or distributed within the state unless it is approved by Louisiana's Department of Public Safety — regardless of whether it meets the federal safety standard (218) covering helmets.

Under the Louisiana law, helmets must first be approved by the American Assn. of Motor vehicle Administrators (AAMVA). This involves a fee, a test report from an AAMVA-approved lab and sometimes product samples or test photographs. (Although the NHTSA interpretation does not say so, the money is believed to go to the pension fund of the vehicle administrators.)

Peck's interpretation is that states are preempted from such activities having to do with presale enforcement of state standards that are identical to federal ones when they "involve procedures or impose burdens" that differ in any significant way from those of the federal regulatory scheme.

NHTSA in the 1970s had won litigation on a federal preemption case involving the Truck Safety Equipment Institute and the State of Pennsylvania.

NHTSA says it believes Congressional intent was to preempt state pre-sale enforcement of identical standards and thereupon cites chapter and verse. Moreover, says Peck, such state action also interferes with NHTSA's ability to assess practicability of potential new federal standards and to assure a proper relationship between benefits and compliance and other costs.

In fact, in some cases, state fees might frustrate the federal effort and have a controlling effect on what level of requirement has costs that are practicable, especially for small equipment makers.

10,000 to 15,000 due in 1983

Mustang convertible to bow next summer

By Al Fleming
Industry Editor

The Mustang's top is coming down next summer.

A convertible version of the sporty Ford compact will show up, it's expected, in July or August. The exact timing isn't certain yet.

The ragtop will be introduced as a 1982 model, but will be marketed only briefly under that designation. Some 300 to 500 units will be produced.

Ford Division plans to step up output at the start of the 1983 model year in late summer. The current program calls for 10,000 to 15,000 softtops to pour into the marketplace during the '83 model year.

The convertible conversion will be done by Cars & Concepts Inc., Brighton, Mich., a special vehicle manufacturer that also is creating the ragtop version of Chrysler Corp.'s LeBaron, which goes into pilot production Jan. 15.

"I think the '82 (Mustang convertible) will be a collector's piece, because of its limited volume," Edsel B. Ford II, marketing plans manager for Ford Division, told AUTOMOTIVE NEWS.

He said he expected the Mustang softtop would be priced "comparably to the LeBaron."

• Explaining the company's rationale for entering the small-volume convertible field — vacated by Detroit auto makers since the end of the 1976 model period — Ford said, "We want to bring some fun back to the market. I'm 33 (years old), I want to have fun while I can. I think a lot of others feel the same. That's my personal opinion.

"But I can say that our company wants to build quality cars and trucks, and have some fun doing it," he added.

Ford credited company President Donald E. Petersen with "really starting all of this." He said Petersen has been pushing for development of new products and concepts that fit the needs of new emerging markets of the '80s.

The Mustang convertible — Ford's first since it dropped the body style at the end of the '73 model year — will be built off the Mustang's two-door notchback body. The four-seater will be based on the Mustang GT series, a cleanly styled package with a bevy of options.

Ford said the Mustang was the "logical choice" for the company's return to the softtop market because "Mustang was the great American convertible in the '60s and '70s," the glory days for the car.

• Asked to compare the concept and strategy of Chrysler's LeBaron convertible with that of the Mustang, Ford said that in his opinion "the LeBaron is a very serious car.

"My tastes run more toward the (Dodge) 024," he said.

He envisions the Mustang softtop as being "my kind of convertible, aimed at the 'wind in the hair' car buyer. I really believe there's a generic convertible buyer."

But that isn't going to keep the company from going after the carriage trade, according to Ford, who declared, "We'd like to get some of the women in Beverly Hills (California) that are now driving Mercedes convertibles."

Although Cars & Concepts will do the convertible adaption from Mustang bodies delivered from Ford's Dearborn assembly plant, Ford Division is studying the possibility of bringing the project in-house.

"We're traditionally an in-house manufacturer," Ford said. "But first we want to test the water to see how big the (convertible) market is."

Historically, the U. S. market for convertibles peaked in the 1963-'65 model years, when the annual rate approximated 500,000 units.

It fell to some 200,000 units by 1966 and below 100,000 by 1971, a victim of the popularity of hardtop body styling, air conditioning options, hard-to-meet government safety regulations and high manufacturing costs.

The last softtop rolled off a Detroit assembly line at the end of the '76 model year when Cadillac built the much-heralded "last convertible." Some 14,000 Eldorado softtops were sold that year.

Ford sold 16,000 Mustang softtops in its final year of production, 1973. However, at least five aftermarket Mustang conversion models currently are being offered in the U.S.

1982 Indy pace car

This Chevrolet Z28 Camaro will pace the 66th Indianapolis 500 race May 30. The special silver and blue Z28 will be powered by a 5-liter fuel-injected V-8 engine similar to the stock Cross-Fire V-8 available in production Z28s. A limited number of the special Z28s will be available for sale by Chevrolet dealers.

He predicts a sales upturn for Chevy

Lund defends '82 pricing approach

By Jim Plegue
Staff Writer

DETROIT. — Chevrolet is expecting many happy returns on a $3 billion investment it has made in four all-new product lines for 1982.

Specifically, the division is forecasting sales of 2.5-million new cars and trucks during calendar 1982, up from 2.1 million last year, according to Robert D. Lund, Chevrolet general manager.

Lund gave his assessment of Chevrolet's future at a New Year's press conference in Detroit last week.

Lund called 1982 a "milestone year" for Chevrolet, which completed a product overhaul that began with the '77 downsized B-body (Impala, Caprice) and culminates with the debut of four all-new 1982 models—the front-drive Cavalier and Celebrity, the new Camaro and the new compact S-10 pickup truck.

• Cavalier actually debuted last May as an '82 model. The S-10 pickup truck was introduced Nov. 12 and public introduction day for the Celebrity and the new Camaro is Jan. 14. Combined, those four products — representing an investment of over $3 billion — are expected to account for 25 percent of 1982 sales, Lund said.

The last time Chevrolet held a New Year's press conference was to celebrate record-snapping 1978 sales figures. The mood was different this time, but Lund was, as usual, the perennial optimist.

"I believe this business is going to be fun again," he said, and listed a number of reasons for a sales upturn this year. Lund said 1982 sales will approach 1980 levels, "given an improved economy, including a lower, more stable interest rate."

With continued economic improvement, Lund said 1983 sales could approach 1979 levels. Lund's reason for optimism: Chevy's complete product line, interest rates are down, disposable income is up, inflation is dropping and average car age today is 6½ years.

• The conference was not all rosy forecasts, however. Lund and Paul J. King, director of engineering for Chevrolet, were grilled on "sticker shock," the structure of the Chevy product lineup and the rationale behind Chevrolet's opproach to marketing the J-body Cavalier.

Originallly, Cavalier was advertised as "the complete car from A to Z," with plenty of standard equipment and a higher price tag. The strategy was aimed at import buyers.

But Chevrolet executives acknowledge that some buyers may have been soured by the high Cavalier prices. Lund announced that Chevrolet is introducing two new price-leader versions of the Cavalier sedan and wagon, called the Cadet. Both models have reduced equipment levels and prices. Additionally, Chevrolet has resurrected the Citation slantback coupe as the price leader in that series.

Still, Lund defended the original marketing approach used with the Cavalier. He said that, of about 11,500 Cavaliers sold in November, about half of those sales were on the East and West coasts, traditionally strong import areas. He added that those sales were predominantly the high-line Cavalier.

• The Cavalier Cadet sedan is priced at $6,432.76, a reduction of $754 in price. The Cadet wagon will cost $6,703.76, a cut of $700. Equipment pulled from those models includes trip odometer, color-keyed instrument panel/console/steering wheel, cigaret lighter, automatic decklid release and AM radio/clock. The price leaders are available in only four colors.

The Citation slantback coupe is priced at $6,297.27, which is $457 below the current two-door Citation hatchback model. Equipment cut from that model includes AM radio, cigaret lighter, decklid and quarter panel striping and some moldings.

SAE meeting looms as international event

DETROIT. — The 1982 SAE Congress and Exposition here Feb. 22-26 is shaping into one of the most internationalized to date. It also will include the largest number of products and services ever displayed at an SAE event.

The show until recently was international in designation every four years. Now it is international every year, according to Louis R. Ross, general chairman.

Ross is executive vice president, car product development group, North American Automotive Operations, Ford Motor Co.

Participation by overseas exhibitors has about doubled since 1978, Ross said. Three countries, Austria, the Netherlands and Luxembourg are new exhibitors this year, he said.

Theme of the 1982 event is: Technology and Mobility: Twin Needs in Tomorrow's World.

More than 80,000 square feet of exhibit space has been contracted for.

There will be a record number of technical sessions this year. They total about 155 for the Cobo Hall show.

Attendees are offered a choice of at least 15 different sessions each morning and afternoon. More than a third of the technical presentations will be international in subject matter or author participation, Ross said.

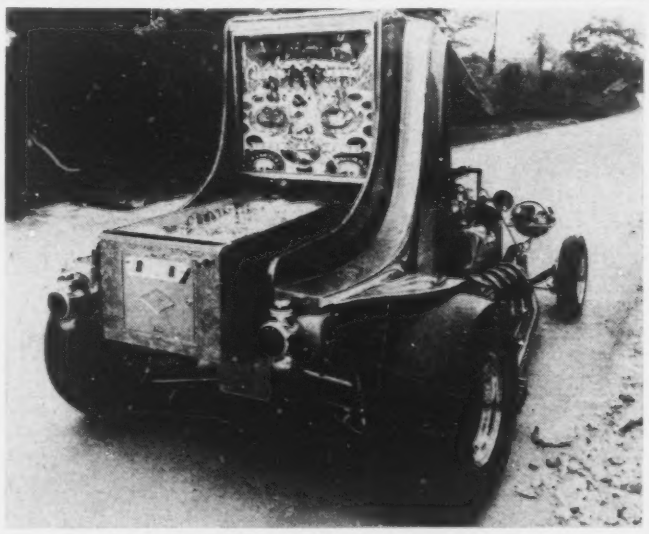
The annual SAE banquet on Thursday of show week historically has been an event of significance. Speaker this year is Transportation Secretary Drew Lewis.

Some 4,000 SAE members and guests are expected to attend the banquet.

Mitsubishi names 2 in U. S. operation

LOS ANGELES. — Mitsubishi Motor Sales of America (MMSA), the newly formed U. S. marketing arm of Mitsubishi Motors Corp., has named Richard L. Norris director of information systems and Peter L. Harbin personnel manager.

Norris joins MMSA after 14 years with IBM Corp., and Harbin has been with Chrysler Corp. for eight years. MMSA will begin selling cars and trucks in the U. S through its own dealer organization in October, 1982.



Pinball Wizard highlights Autorama

This rather unusual vehicle, reasonably called Pinball Wizard, is a driveable street rod that features a gold pinball machine designed into the rear of the vehicle. It was one of more than 400 handcrafted custom cars at the 30th annual Autorama at Cobo Hall in Detroit.

October registrations sink to a 20-year low

By Jenny L. King
Staff Writer

New-car registrations dropped to their lowest level in 20 years last October, according to registration figures compiled and reported by R. L. Polk & Co. The October total was down from September and second worst to January in the 10 months of 1981.

New-car registrations in October numbered 654,330, down 14.22 percent from 762,792 the preceding month, and down 12.42 percent from 747,080 in October of 1980. It was the most

Table on Page 28.

modest October since 1961 when 549,137 new cars were registered. January, 1981, registrations numbered 636,488, making it the softest month of the calendar year.

The record registration total for October is 955,555, set in 1969.

Domestic new-car registrations totaled 471,920, down 14.72 percent from September's 533,362, and down 14.35 percent from 550,973 the preceding October.

Registrations of new imported cars in October totaled 182,410, down 6.98 percent from 196,107 a year earlier.

For the first 10 months of 1981, new-car registrations totaled 7,218,659, down 1.39 percent from 7,320,397 in 1980. The 10-month domestic total of 5,140,488 was down 1.63 percent from 5,225,831 a year earlier.

Year-to-date import registrations numbered 2,078,171, down 0.78 percent from 2,094,566 in 1980.

• Chrysler Corp. and Ford Motor Co. increased their shares of the total market in October, and imports and miscellaneous domestics also were up. General Motors and American Motors yielded ground. For the 10 months, only Chrysler and the imports improved, and GM gave up the most.

In October, Chrysler gained 1.15 percentage points, climbing to 8.11 percent from 6.96 percent of the total market. Ford was up 1.11 percentage points, to 16.69 percent from 15.58 percent. Combined imports were up 1.63 percentage points, to 27.88 percent from 26.25 percent, while miscellaneous domestics were up to 0.06 percent from 0.05 percent.

AMC dropped to 1.47 percent from 1.85 percent in October, and GM dropped 3.52 percentage points, to 45.79 percent from 49.31 percent.

Excluding imports, October registrations were divided as follows: GM, 63.49 percent; Ford Motor Co., 23.14 percent; Chrysler Corp., 11.25 percent; AMC, 2.04 percent, and miscellaneous domestics, 0.08 percent.

October, 1980, domestic registrations in shares of the market were: GM, 66.86 percent; Ford, 21.13 percent; Chrysler, 9.44 percent; AMC, 2.51 percent, and miscellaneous, 0.06 percent.

• Intermediates represented the largest market class segment among domestics in October. The breakdown was: Intermediates, 28.69 percent; compacts, 26.35 percent; subcompacts, 22.31 percent; standards, 14.63 percent, and luxury models, 8.02 percent.

Of the total market in October, imports accounted for the largest share, at 27.88 percent. They were followed by intermediates at 20.70 percent; compacts at 19.00 percent; subcompacts at 16.09 percent; standards at 10.55 percent, and luxury models at 5.78 percent.

A year earlier the total market spectrum was as follows: Imports, 26.25 percent; intermediates, 23.61 percent; compacts, 20.24 percent; subcompacts, 14.52 percent; standards, 10.62 percent, and luxuries, 4.76 percent.

New Dodge dealer chairman

John B. Naughton, left, executive vice president-sales and marketing, Chrysler Corp., congratulates Herbert G. Yardley, owner of Massey-Yardley Dodge, Fort Lauderdale, Fla., on taking office as new national chairman of the Dodge Dealer Advisory Conference. The conference represents more than 1,750 Dodge dealers at quarterly meetings with Chrysler Corp. officials.

White Motor Corp. reports net loss of $301 million

CLEVELAND. — White Motor Corp. has announced that unaudited financial statements filed with the Securities and Exchange Commission disclosed that the corporation lost approximately $146 million in connection with discontinued truck and farm equipment operations, and approximately $165 million on the sale of these operations during the 15-month period ended March 31, 1981.

Net loss for the period was $301 million after extraordinary credits of approximately $11 million.

White, former manufacturer of heavy trucks and farm equipment, filed a petition under Chapter 11 of the U. S. Bankruptcy Code in 1980 after unsuccessful attempts to renew financial agreements with lenders.

White sold substantially all its heavy-truck assets last August to Volvo White Truck Corp., U. S. subsidiary of AB Volvo of Sweden. The farm-equipment business and Canadian and Australian operations were sold earlier.

White Motor's current assets consist primarily of the proceeds from the sales of various businesses, the capital stock of its finance subsidiary — White Motor Credit Corp., which is also in Chapter 11 proceedings — and several properties, including its plant and office facilities in Cleveland and Farmington Hills, Mich.

• Both White Motor and White Motor Credit Corp. filed reorganization plans last August.

The White Credit plan was approved by the Bankruptcy Court in December. It contemplates payment in full to the creditors of White Credit and the possible sale of such finance operations during 1982.

Wallace B. Askins, White Motor chairman, said, "we believe that the confirmed credit plan represents a fair treatment of all interests, including those of the sole stockholder, White Motor Corp."

Negotiations are continuing with creditors on White Motor's reorganization plan.

Askins said the final form of such a plan and the ultimate timing and amount of payment to creditors and other parties are dependent on several factors, including final determination of the price to be received for assets sold to Volvo White and the future of White Motor Credit.

White Motor also said the net loss incurred during the 15-month period, including disposition losses, resulted in a negative net worth of approximately $69.4 million as of March 31, 1981. The reported negative net worth could be further adversely affected by the outcome of a number of uncertainties set forth in its filing, Askins said.

London FX4 cabs to be replaced in '84 after long run

LONDON.—This city's world-famed taxicab, known to tourists for its box-like appearance, passenger and luggage capacity and ability to turn around in London's narrow streets, will be succeeded by an entirely new taxi in 1984.

Carbodies, Ltd., Coventry, which manufactures the current FX4 London cab, plans to introduce a new model, the CR6. It will share body components of the Range Rover and be powered by a modified 2.5-liter Land Rover diesel engine instead of the present 2.5-liter Austin motor.

Other features of the new cab, according to Grant Lockhart of Carbodies, will include a five-speed gearbox, power steering and servo-assisted brakes on rear as well as front wheels, improved insulation, more efficient heater and better driver's seat.

Before being placed in use here, the new taxi must meet the exacting standards of the London Public Carriage Office which controls the city's 12,000 licensed taxicabs and 17,000 cab drivers.

The rugged FX4 taxi now in use was introduced in 1958 and more than half of the 41,000 cabs produced since that date are still operating today.

From pipefitting to used cars to the 'Big Two'

Quirk, 30, heads Chevy, Ford deals

By Marc Stern
Staff Correspondent

BRAINTREE, Mass. — Danny Quirk has come a long way.

Eight years ago, he was a 22-year-old pipefitter, who sold an occasional used car on the side. He found he liked selling cars better than pipefitting, so he decided to take a fling at selling used cars full time.

Using funds he generated by building and selling some houses, he took the plunge into used-car sales in Lowell, north of Boston.

Having no background in auto sales, Quirk relied on hard work to learn the ropes. And learn them he did. Within a year, his used-car lot was turning over 1,500 cars a year.

In 1977, Quirk, then 26, bought Clark and Taber Chevrolet here and set out to make the already successful Chevrolet store even more profitable. At the same time, he sold his used-car deal.

He relied heavily on price advertising, and he considers it the most important key to his success. The other key, he believes, is hard work.

His dealership, Quirk Chevrolet, annually delivers 3,000 new and used vehicles. This makes his store one of the largest-volume outlets in New England, and it also makes him attractive to other auto manufacturers.

Ford Motor Co. has enthusiastically welcomed him into its fold of dealers as the owner of Quirk Ford in nearby Quincy. So, at 30, he heads dealerships

Statistics firm marks anniversary

Polk keeping track of industry 60 years

DETROIT. — Statistics relating to America's young automobile industry were a jumble when R. L. Polk & Co. began "keeping the record straight." The statistical firm celebrated its 60th anniversary in 1981.

In 1921, Alfred P. Sloan Jr., who later became president of General Motors, called the information problem to the attention of Ralph Lane Polk.

Sloan asked Polk, whose company had been publishing city directories since 1870, to take over the task of impartially tabulating and publishing key statistical information about the nation's numerous makes of cars.

Polk began compiling and publishing regular reports on new-car registrations and an annual report of all cars registered in the U. S.

Polk listed 58 makes of cars on America's highways 60 years ago, ranging from the Allen to the Winston. Only seven of the original names are still used today — Buick, Cadillac, Chevrolet, Dodge, Ford, Lincoln and Oldsmobile. Several others produced until recent years: Hudson, Nash, Packard and Studebaker.

But others would ring bells only with oldtimers or antique-car buffs — Apperson, Dixie, Lafayette, Moon and Saxon, for a sampling. And yes, there was Jack Benny's Maxwell—268,164 of them on the roads in 1921.

The first report had a category for electrics (18,184 on the road), but none for imports. The first Polk report listed a total of 9,175,814 passenger cars. Ford was by far the most popular make, with 4,209,928. Buick was a distant second, with 622,375 registered.

Sixty-one years later, Polk automotive reports are massive, detailing not only the total cars registered (some 104 million) by make but broken down by models, certain types of equipment and by state and county.

A major use of Polk's data is to locate car owners for recall notices. Owners are usually found through a computer search of the voluminous data maintained by the company's Cincinnati Division.

"In 60 years, the number of manufacturers has dropped considerably while the number of cars on the highway has increased more than 10-fold," said Ralph L. Polk Jr., company president and the fourth R. L. Polk to head the firm. It was his grandfather who was approached by Sloan.

The Polk company remains a major directory publisher — 1,300 a year, covering 6,500 communities throughout the U. S. and Canada. The firm also publishes a U. S. and an international bank directory and is one of the nation's leaders in direct marketing services.

New-car sales climb 18 pct. in oil-boom town

SAN ANGELO, Tex. — Nationwide car sales may be at their lowest level in 22 years, but in parts of West Texas where the oilfield activity is at record highs, new-car sales are higher than in 1980.

Here in San Angelo, new-car dealers report an 18 percent sales increase for the first 11 months of 1981 as compared to the corresponding period in 1980.

New-car sales for this city of 75,000 jumped from 7,969 between January and November, 1980, to 9,405 for the similar 1981 period.

Sales were up more than 18 percent at Jerry Frederick Mercury-Lincoln-Dodge, according to Jerry Frederick. He said about 10 percent of the buyers were paying cash. Part of the increase in sales can be attributed to interest rates edging downward, he said.

Wendell Underwood, general manager for Mustang Chevrolet, reported a similar increase in new-car sales, with credit sales leading cash sales until December, when they were about even. He said large models were moving better than smaller models.

Tom Randall, owner of Randall Motors, said Cadillac and Oldsmobile had been about 18 percent higher than last year, with December being a very good month.

25 for Clark

Joe H. Kemna, left, Kemna Motor Co., Bancroft, Ia., receives a plaque marking his 25 years as a Chevrolet dealer from Chevrolet Assistant Zone Manager T. J. Clark.

Bucket, bench and split bench

Checking out '81 seating choices

By Joseph Bohn
Marketing Editor

Where or how passengers sit in a car wouldn't seem to be of paramount importance, but variations of available seats seem to grow yearly.

A bench seat, for example, can have separate fold-down backs, or be separated into a "60/40 configuration," or be just slightly separated so that technically it falls into the category of a bucket seat.

Then there are conventional bucket seats, or those in which only the driver's side is electric-powered, such as in the new Cimarron; or those that recline.

A survey of three basic types indicates that while bucket seats continued to gain popularity, as small-car production increased in '81, close to one-third of buyers chose a split seat ("60/40" type), while nearly one-third chose conventional bench seats (including those where rear backs fold down).

Bucket-type seats went into 37.78 percent, or 2,553,393, of the domestically-built cars in the '81 model year, up from 36.89 percent, or 2,635,904 in '80.

At General Motors, bucket seats accounted for 25.21 percent, or 1,059,622 cars. That was off from 29.44 percent, or 1,349,957 in '80.

GM's total — and the industry's — would have been higher with the inclusion of the '82 J2000, which came in as a mid-year entry. Pontiac did not report it as part of the '81 run. However, Chevrolet and Cadillac did report their Cavalier and Cimarron J-cars in the '81 model run.

The J-cars, including this year's new entries by Buick and Oldsmobile, have bucket seats, and should send the total of bucket seats up sharply for '82.

At Ford, bucket seats accounted for 55.85 percent of production, or 839,949 cars. That was up sharply from 43.16 percent, of 592,714 in '80.

Chrysler installed bucket seats in 47.20 percent, or 346,274 cars. That was off from 52.36 percent, or 400,721 in '80.

American Motors installed them in 93.28 percent, or 127,913 cars. That was up sharply from 34.97 percent, or 69,185 units in '80.

Volkswagen, of course, offers only bucket seats in American-made Rabbits, of which there were 179,635 against 223,267 built in '80.

• Split seats — those in which a section of front seat moves independently of the other — accounted for 29.34 percent, or 1,982,784 cars built in the '81 model year.

Last year's chart did not provide a breakout of this variety.

General Motors is by far the biggest installer of such seats, putting them into 1,593,947 cars, or 37.91 percent of GM's total production.

Ford Motor installed them in 334,883 cars, or 22.27 percent of output.

Chrysler installed them in 53,954 cars, or 7.36 percent of its total.

More conventional bench seats accounted for 32.88 percent of industry output, or 2,222,115 cars.

At GM, they accounted for 36.88 percent of output, or 1,550,494 cars.

At Ford Motor, they accounted for 21.88 percent, or 339,114 units.

At Chrysler, they accounted for 333,295, or 45.44 percent of production.

At AMC, they accounted for 6.72 percent, or 9,212 units.

Power seats continued to gain popularity in '81.

Industrywide, they went on 21.56 percent of cars, up from 15.01 percent in '80.

GM installed power seats in 24.09 percent of its cars, up from 17.53 percent in '80. Some 1,012,837 cars carried the option against 803,943 in '80.

Ford Motor installed power seats in 24.48 percent of its cars, equal to 368,128. That was up sharply from 14.55 percent, or 199,866 in '80.

Chrysler installed them in 9.80 percent, or 71,849 units. That was up from 8.56 percent, or 65,542 in '80.

American Motors installed them in 3.03 percent, or 4,156 cars. That was up from 1.65 percent, or 3,265 in '80.

Volkswagen doesn't offer the option on Rabbits.

*Cimarron power seats are for driver side only.

Note: Figures are generally based on U. S. production. However, Canadian-only sourced cars, such as Cordoba/Mirada, are included in some instances; also, some '82-only models, such as EXP/LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,513 Chrysler models, 137,125 AMC and 179,635 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,673,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouths and 311,988 Dodges.

The top's the thing

Lancia Zagato for 1982 has a unique removable Targa roof with a fold-down backlight. It features a double-overhead-cam engine, five-speed transaxle and Bosch L-electronic fuel injection.

'82 Lancia Zagato features injection, 5-speed transaxle

MONTVALE, N. J.—The 1982 Lancia Zagato features Pininfarina styling and a unique Targa top which has both a removable Targa roof and a fold-down rear window.

The Zagato is powered by a transverse front-mounted, four-cylinder, double-overhead-cam engine of 1,995 cc which produces 108 HP at 5,500 RPM.

It features Bosch L-electronic fuel injection and a five-speed transaxle.

The car has rack-and-pinion steering, all independent suspension, alloy wheels and Lancia's patented Superduplex powered four-wheel disk brake system.

The fully instrumented dash has an adjustable steering column and warning lights for low brake fluid and front brake pad wear. The Zagato is available in six color combinations. Options are limited to leather upholstery, metallic paint, power windows and air conditioning.

It is marketed by Fiat Motors of North America, which has added a new three-year limited warranty against corrosion and an optional limited powertrain warranty of 24 months or 24,000 miles to the standard 12-month/12,000 mile limited vehicle warranty and guaranteed price policy.

Together, this enables new owners to secure protection for 36 months or 36,000 miles.

Lancia Turbo racing cars won the World Championship of Makes in 1981 and 1980.

Auto 'mini-mall' set in Oregon

PORTLAND, Ore.—The building at N.W. 14th Ave. and Burnside which formerly housed the Fisher Ford dealership will be the home of Downtown AutoBlock, which developer David Blocksom described as the Northwest's first automotive shopping center.

The 135,000-square-foot facility will have car stereo, parts, tire and muffler retail stores and such service-related businesses as auto painting, a body detail shop, brake repair, general car tuneup and repair and some import specialists.

The renovation is expected to be completed next spring. The site is made up of three buildings which have been unified by ramps and interconnecting walls.

Imports dip in 1981, but market share is record 27.25 pct.

Domestic sales lowest in 20 years

Continued from Page 2

19.62 percent; Mercedes-Benz was up 17.23 percent to a record 63,059; Volvo was up 13.12 percent to a record 64,477; BMW was up 12.82 percent to a record 41,761; Jaguar was up 55.00 percent; Renault was up 21.70 percent; Porsche was up 7.16 percent, and Saab was up 7.78 percent.

Imports captured 27.25 percent of the 1981 market. The next largest segment went to U. S. intermediates at 20.40 percent, followed by compacts at 20.22 percent, subcompacts at 17.11 percent, standards at 10.16 percent and luxury models at 4.86 percent.

In 1980 the spectrum was: Imports at 26.69 percent, intermediates at 21.37 percent, compacts at 20.96 percent, subcompacts at 15.41 percent, standards at 11.09 percent and luxury models at 4.48 percent.

• Domestic sales for the final month of the year were nothing less than disastrous. The domestic sales total in December was 357,580, lowest since 303,161 'way back in 1951. Best total for the month was 723,737 in 1964. December, 1981, sales dropped 24.15 percent from 471,443 a year earlier.

The December domestic daily selling rate averaged 13,753, down 25.15 percent from 18,132 a year earlier. There were 26 selling days both years.

All five domestic makers were on the decline for the month. GM was down 19.61 percent, to 218,670 from 272,004 in 1980. Ford plunged 37.69 percent, to 72,036 from 115,615. Chrysler was down 23.89 percent, to 48,045 from 63,127. AMC dropped 19.31 percent, to 7,741 from 9,594. VWoA was down a scant 0.14 percent, to 11,088 from 11,103.

GM earned 61.15 percent of the December domestic market, up more than three points from 57.70 in 1980. Ford dropped to 20.15 percent from 24.52 percent. Chrysler stood at 13.44 percent, up from 13.39 percent. AMC climbed to 2.16 percent from 2.04 percent, and VWoA cornered 3.10 percent, up from 2.35 percent.

Cadillac was the only U. S. make to report a sales increase in December. The luxury-car maker was up 18.56 percent, to 20,600 from 17,374 a year earlier.

Losses ranged from 5.29 percent for Oldsmobile to 55.55 percent for Imperial.

Import sales in December totaled 165,236, down 7.41 percent from 178,459 in 1980. Imported cars accounted for a record 31.61 percent of the whole market—it was a record both for December (up from 27.37 percent in 1980) and for the 1981 calendar year.

Fourth-quarter domestic sales dropped 23.08 percent, to 1,280,413 from 1,664,574 in 1980.

Domestic sales during the final 10 days of the year were down 13.78 percent, to 126,251 from 146,435 in 1980. On a daily-selling-rate basis, they were down 23.36 percent: 14,028 this year compared with 18,304 in 1980.

The market-class breakdown in December was as follows: Imports at 31.61 percent, intermediates at 19.58 percent, compacts at 16.57 percent, subcompacts at 11.29 percent and luxury models at 6.30 percent.

Head of Toyota rules out plans to build in U.S.

TOKYO. — The president of Toyota Motor Co. flatly ruled out any move toward car production in the U. S., according to the Japan Economic Journal.

It quoted Eiji Toyoda as saying, "At present, I don't feel there will be any merit for us to start production in the U. S., though we have studied feasibilities of such a project from various points of view."

Replying to a question about rumors that Toyota was seeking a factory site in the U. S., Toyoda was quoted as saying, "why should we try to buy land without any definite plan?"

Toyoda, referring to growing tension between the U. S. and Japan, said it stems from a snowballing trade imbalance and he called on his government for action to reduce Japan's trade surplus.

He said it is up to American makers to increase their efforts if they wish to sell more cars in Japan and he denied that non-tariff barriers hold down sales.

"The U. S. Big Three could find better ways by using their offshoots in Japan," he was quoted as saying.

*—AMC does not have a nameplate breakout for 10-day periods.

Fed regulations are delayed

WASHINGTON. — Mandatory effective date of the Federal Reserve Board Regulation M (consumer leasing) and Regulation Z (truth-in-lending) as they were revised to carry out the Truth in Lending Simplification and Reform Act has been postponed until Oct. 1, 1982.

This accords with an amendment signed by President Reagan in December, 1980, that delayed the law until Oct. 1, 1982.

In addition, the transition period for creditors' compliance with the earlier version of Regulation Z has been extended from April 1, 1982, to Oct. 1, 1982.

1981 industry total lowest in 20 years

Chrysler, Ford post output gains

By Patricia Hoffman
Staff Writer

The 1981 calendar year finished on a sour note as domestic auto production hit the lowest mark in 20 years, and the total dropped 2.20 percent below the 1980 total.

Final figures showed U. S. makers wound up 1981 with 6,275,721 units, down from 6,416,885 completed in 1980, and the lowest full-year total since 5,522,004 in 1961.

The largest drop in output for the year was felt by American Motors with 109,319 units, down 33.65 percent from 164,765 in 1980.

Following suit was Volkswagen of America with 167,829, down 14.85 percent from 197,106; Checker Motors had 3,010, down 9.88 percent from 3,340, and General Motors finished with 3,925,679, a drop of 4.40 percent below 4,106,191.

Of the six auto companies, only two showed gains for the 1981 year. They were: Chrysler Corp., with 749,687, up 17.41 percent from 638,535, and Ford Motor with 1,320,197, up 1.01 percent from 1,306,948.

In December, 351,475 units were completed, a drop of 25.81 percent from 473,764 in the comparable 1980 month. The total, which marked a 30-year low for the auto makers, was the lowest point for the month since 284,837 units were assembled in 1951. The total was the lowest for any month since 312,758 cars were completed in August, 1980.

Breakdown for the month by company is: General Motors: 70.73 percent; Ford Motor, 14.38 percent; Chrysler Corp., 10.57 percent; Volkswagen of America, 2.89 percent and American Motors, 1.43 percent. Checker Motors was idle the entire month of December.

The auto manufacturers ended up with 1,302,109 units for the fourth quarter, down 23.90 percent from 1,711,145 in the comparable 1980 period. It was the lowest fourth-quarter total since 1,259,839 units in 1959, and the lowest total for any quarter since the third quarter of 1980, which tallied 1,264,276.

Last week's output of 63,121 units dropped 9.54 percent below 69,775 completed during the shortened Christmas week because of extended downtime at all American Motors, Chrysler Corp., Volkswagen of America and Checker Motors' facilities, plus all but the Wixom assembly point at Ford Motor and several points at General Motors. There was no production New Year's week.

The total for the week dropped 45.28 percent below 115,363 units the comparable 1981 week.

Truck sales lead won by Ford for 5th year in a row

DETROIT. — Ford was No. 1 in retail truck sales in 1981 in the U. S. for the fifth consecutive year, topping runnerup Chevrolet by more than 40,000 units.

Louis E. Lataif, Ford Division general manager, reported that Ford dealers sold 716,849 light, medium and heavy trucks last year. He also noted that Ford has taken first place in U. S. truck sales in seven of the last 10 calendar years.

Chevrolet said its dealers retailed 675,628 light, medium and light-heavy trucks last year, 41,221 units fewer than Ford. Chevrolet discontinued its line of heavy line-haul trucks late in 1980.

Canadian output of cars, trucks down 5 pct. in '81

Canadian auto production and truck production were both about 5 percent below the 1980 totals.

The auto manufacturers turned out 801,903 units, down 5.30 percent from 846,777 in 1980. It was the lowest total since 1967 when 714,084 units were completed.

The truck makers finished 1981 with 497,804 units, a 5.41 percent decline from 526,277 in 1980. It was the lowest total since 1976 when 497,430 trucks were built.

In December, the auto makers completed 50,799 units, down 13.53 percent from 58,747 in the 1980 month. It was the lowest December since 41,061 in 1964, and the lowest output for any month since August, 1981, when the total was 48,056.

December truck output was 33,932, down 22.79 percent from 43,947 in 1980, and the lowest output for the month since 32,196 in 1975. It was the lowest for any month since August, 1981 when 31,319 trucks were built.

Last week's auto output was 3,657 units, a drop of 57.46 percent from 8,596 during Christmas week. All plants were idle New Year's week. All American Motors, General Motors and Ford Motor facilities were down last week.

The total was also down 76.39 percent from 15,487 in the comparable 1981 week.

Truck production last week totaled 2,390, down 53.81 percent from 5,174 in Christmas week in December, and down 77.05 percent from 10,415 trucks in the comparable 1981 period.

Chrysler's Windsor point, Ford's Oakville plant and GM's Oshawa and Scarborough truck facilities were idle last week for extended holiday downtime.

Import-car sales slumping in Japan

TOKYO. — Sales of imported cars in Japan in the first 11 months of 1981 fell 14.3 percent from the previous year's period to 34,740.

The final 1981 count is expected to be about 39,000—below 40,000 for the first time in eight years. Import sales here peaked in 1979 at about 60,000.

Final '81 figures for trucks show small production gain

Domestic truck makers wound up production for 1981 slightly ahead of the comparable 1980 total.

Total truck output for the year reached 1,670,488 units, a gain of 4.83 percent from 1,593,489 in 1980. Both years were down sharply from 1979, when 2,554,752 units were assembled.

In December, truck manufacturers completed 115,284 units, down 17.64 percent from 139,978 in the comparable 1980 month. The total was the lowest for the month since 1962 when 111,031 units were completed.

During the final three-months of 1981, makers assembled 366,390 trucks, a drop of 21.99 percent from 469,651 in the corresponding period in 1980, and the lowest output for the quarter since 344,420 units in 1970.

Due to the extended downtime last week at all Ford Motor, Chrysler Corp., Volkswagen of America and American Motors' facilities, output for the week of 20,350 units dropped 11.39 percent below 22,966 trucks assembled during the shortened Christmas week. There was no production New Year's week. The total was also down 32.99 percent from 30,372 in the comparable 1981 week.

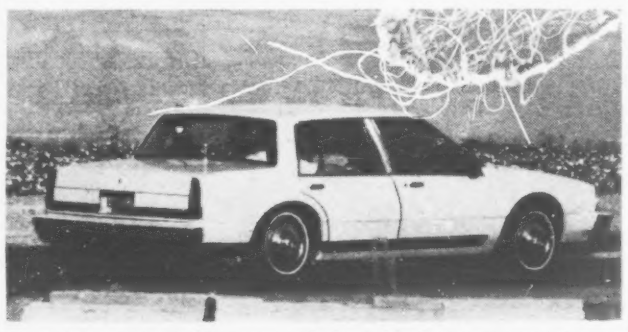
Smaller Olds 98

C-ing is believing

A sneak preview of the 1984 full-size Oldsmobile — a member of a smaller C-car series—shows family resemblance to the 1982 A and J-cars. This front-wheel-drive Ninety-Eight will be built on a wheelbase of about 107.5 inches and should be 1,000 pounds lighter and two feet shorter than its 1982 counterpart. Buick and Cadillac should produce similar versions, and all are expected to cost nearly $20,000.



breaking news

No GM S-car for U. S.; P-car on hold

WASHINGTON. — The S-car is out of the U. S. picture at General Motors but the P-car continues to hang on. "The S-car ran into some financial difficulties so it is not really a 'go' project by any stretch of the imagination," said Michael F. Juras, Chevrolet chief engineer in charge of small vehicle programs and advanced engineering activities. "I'd have to say the P-car is on hold," he said. "There is a lot of desire on the part of Pontiac and a lot of people at the corporation to go forward with that as soon as we see some money free and clear."

Jeep buyers to get rebates up to $1,000

SOUTHFIELD, Mich.—American Motors has announced a bonus of up to $1,000 for consumers who purchase 1981 or 1982 Jeep CJ, Scrambler or pickup truck models. The program runs until March 31, 1982. The Jeep CJ-5 gets a $400 cash bonus, while $500 is tagged for the CJ-7 or Scrambler, $600 for pickup trucks and $1,000 for CJ Limited models. Cherokee and Wagoneer are not included.

Nissan to buy wheels from Rockwell

CARSON, Calif. — Nissan U.S.A. has signed a contract with Rockwell International Corp. to buy up to an estimated $10.5 million in aluminum wheels during the next two years. It is believed to be the largest agreement ever reached be-

Year opens with 107-day new-car supply

Inventory is highest ever

By Richard A. Wright
Assistant Managing Editor

The auto industry's inventory of North American-built new cars climbed to its highest point in history Jan. 1, opening the year with a 107-day supply.

This compared with an 83-day stockpile on Dec. 1 and a year-opening 80-day supply in 1981. It was the first time ever that the days-supply figure for the whole industry topped 100.

The domestic new-car inventory totaled 1,471,053 on Jan. 1, which was actually down from 1,489,712 a month earlier. The bloated days-supply figure was the result of the continuing downward spiral in sales. A year ago, the domestic stockpile totaled 1,448,450 on Jan. 1.

All of the corporate makers except Volkswagen of America opened the new year with heavier days' supplies than they had a month earlier, although Chrysler recorded only a modest increase. In terms of unit count, Ford Motor Co., Chrysler Corp. and VWoA trimmed their stocks.

• General Motors' inventory grew from a 77-day supply Dec. 1 to a 107-day stockpile Jan. 1. GM had particularly heavy stocks of its J-car lines. The newly introduced A-body lines were also in heavy supply, although they had not really been on the market long enough to establish solid sales rates.

Ford Motor Co. opened 1982 with a 113-day supply, up from an 89-day stock a month earlier. Following the general industry pattern, Ford was heaviest in small cars, lightest in big ones.

Chrysler Corp. had a 104-day supply Jan. 1, up only slightly from its 103-day stock a month earlier. Chrysler's sales rate held up much better than GM's or Ford's in December.

American Motors had a 97-day supply Jan. 1, up from 76 days a month earlier, while Volkswagen's stock of U. S.-built Rabbits stood at 83 days, down from 94 days Dec. 1. VWoA's unit count was down and it was the only maker to boost its sales rate in December.

The Jan. 1 domestic inventory was divided this way: GM, 61.13 percent; Ford Motor Co., 21.41 percent; Chrysler Corp., 13.09 percent; VWoA, 2.40 percent, and AMC, 1.97 percent.

A month earlier, the domestic inventory was divided as follows: GM, 58.24 percent; Ford Motor Co., 24.31 percent; Chrysler Corp., 12.96 percent; VWoA, 2.48 percent, and AMC, 2.01 percent.

Table on Page 53

By size class, the industry had a burdensome 149-day supply of subcompacts, up from 107 days a month earlier, compared with a relatively lean 66-day supply of standards, up slightly from 63 days. A number of standard-size cars have gone out of production, but sales of the remaining entries appear to be healthier than in the smaller sizes.

The industry also had a heavy stock of compacts, good for 106½ days on Jan. 1, up from 73 days Dec. 1. Intermediates were in 120½-day supply as the year

GM, UAW to trade cuts in prices for benefit concessions

By Marjorie Sorge
Labor Editor

DETROIT. — In an unprecedented move, General Motors has agreed to lower its U. S. car and truck prices "penny for penny" on any cost savings generated by UAW concessions in a new contract.

UAW President Douglas A. Fraser said, "Obviously, we are hopeful and confident that the lower prices will generate a significant amount of sales and result in the return to work of many of the 124,000 laid-off General Motors workers."

He said the price reductions must be "significantly meaningful and long enough in duration" so that they generate sales.

GM also agreed to in effect open its books to an independent CPA who would make sure all the cost savings were passed on to the consumer.

Also, Fraser has indicated that the contract currently in force will kick back in before the expiration of the agreement being negotiated.

There are also agreements between the UAW and GM to provide protection against outsourcing with greater job security; equality of sacrifice by all non-UAW groups at GM including Chairman Roger B. Smith and possibly its stockholders, and flexibility on the duration of the revised agreement. The union's right to demand job guarantees hinges on the company's ability to lower the prices of cars.

The price cuts would hold throughout the length of the new agreement, and GM and the UAW are remaining "flexible" on what that length might be.

Since no concessions have yet been agreed upon, a dollar figure cannot be placed on the price cut, but a Detroit analyst advised that it must be significant.

"If they're going to reduce prices, they'd better do it right," he said, "and I mean at least $1,000 per car. With anything less than that, the program will fall flat on its face.

"A cut of $300 or $400 may be good for advertising and promotion purposes, but it won't help sales. Today's domestic cars are way beyond the reach of the average buyer. If you're going to cut prices, dammit, **cut prices!"**

Any GM price cut will be retroactive to midnight, Jan. 12.

• Smith said the cuts would not necessarily be across the board but would be spread among the car lines as the market dictated. Fraser also said the agreement

Excitement looms, he tells Automotive News

Edsel discusses Fords of the future

By Al Fleming
Industry Editor

"There've been a lot of rumors," the sandy-haired young auto executive admitted, "so maybe this is the time to say that SVO (Special Vehicle Operations) is in fact doing a higher-performance Mustang and Capri for 1983."

Not that Edsel B. Ford II, seated at a conference table in his office on the 37th floor of the Renaissance Center's 300 Tower in Detroit, was anxious to mention Capri, a Lincoln-Mercury Division product.

For the 33-year-old son of former Ford Motor Co. Chairman Henry Ford II owes his loyalty to Ford Division, where he is marketing plans manager. But he is caught up in the glitter of vehicle product planning, where one tends to create a single-minded life of automotive tomorrowland.

"When I speak about product," it's from Ford Division's standpoint," he made clear. "Not Lincoln-Mercury or the corporation."

The 1983 bomb of a Mustang (and Capri) is being developed by an SVO group headed by Michael Kranefuss, hauled from Europe into Dearborn a year or so ago to regenerate the U. S. operation's racing instinct.

Since Kranefuss's arrival, Ford Motor Co. has struck up a heavy involvement with NASCAR (National Stock Car Racing Assn.) to the point of

509,133 delivered; GM is leader

Sales of diesel autos climb 30 pct. in 1981

By Jim Plegue
Staff Writer

American consumers, who generally snubbed new cars last year, took a different attitude toward the automobile when it had a diesel engine under the hood.

Domestic and import makers sold 509,133 diesel-powered cars during the 1981 calendar year, a hefty 30.54-percent increase from the 399,306 diesel cars sold during 1980. In 1979, makers sold 277,817 diesel automobiles.

As has been the case for several years, diesel-car sales have bucked the nation's overall car sales trends. Sales of domestic new cars last year hit a 20-year low and slipped 5.65 percent from sales during 1980. Import sales were down 2.92 percent last year, too.

But sales of diesel-powered cars have continued to post year-to-year gains, hitting the half-million mark last year, and indications from the auto makers points to a similar — if not larger — increase during 1982.

General Motors remained the diesel powerhouse, selling 301,488 diesel-powered cars last year, a sizeable 36.17-percent boost from the 221,394 sold during 1980. GM's market share jumped 3.77 percentage points—from 55.45 percent in 1980 to 59.22 percent in 1981.

GM may capture even more of the diesel market this year behind expanded use of the Oldsmobile-built 5.7-liter (350-CID) V-8 diesel and introduction of the all-new Olds-built 4.3-liter (263-CID) V-6 offered in the corporation's new front-drive A-body cars.

Oldsmobile was GM's leading division, selling 151,667 diesel cars last year, a 19.56-percent increase from 126,853 during 1980. But Oldsmobile's market share actually dropped nearly two percentage points, a result of increased import competition, as well as huge increases by Buick, Pontiac and Chevrolet.

• Cadillac was the only loser among GM divisions. Diesel sales were off 3.86-percent last year and market share fell by 2.57 percentage points. A Cadillac spokesman said many Cadillac buyers opted for the company's V-8-6-4 gasoline engine in lieu of diesel power early in the calendar year.

Buick, Pontiac and Chevrolet expanded diesel-engine availability last year to cover the majority of their car lines. As a result, Buick diesel sales increased 145.72 percent, Pontiac sales were up 60.42 percent and Chevrolet sales jumped 128.09 percent.

In addition to the Olds-built diesel engines, Chevrolet also offers an Isuzu-built 1.8-liter diesel engine as an option in Chevette. A Chevrolet spokesman said the division has the capacity to build 150,000 diesel-powered cars during 1982.

GM's increase was at the expense of Volkswagen of America. Combined Volkswagen-Audi diesel car sales nudged ahead slightly last year, but VWoA surrendered 6.57 percentage points of market share to increased competition. VW-Audi penetration dropped from 31.12 percent in 1980 to 24.55 percent in 1981.

Volkswagen diesel car sales were up 2 percent last year. In addition, VWoA sold 26,180 diesel pickup trucks, up from 14,511 during 1980. But Audi diesel sales took a 19.92-percent nosedive in 1981.

• Audi may recoup those losses this year with new turbocharged diesel 4000 and 5000 models which debut this summer. The company has targeted sales of 8,300 diesel 5000 models, the majority of which will be turbos, and another 10,000 Audi 4000s, diesel and turbocharged diesels combined.

Mercedes-Benz sold 49,354 diesel cars last year, up 25.70 percent from the 39,262 sold during 1980. Diesel models accounted for 78.3 percent of total Mercedes sales of 63,059 units. The company expects to sell more than 50,000 diesel cars in the U. S. this year.

Peugeot sales of 14,340 diesel cars last year represented a 40.15-percent boost from the 10,232 sold during 1980. Peugeot has forecast diesel sales of about 16,000 units in the U. S. during 1982.

Newcomers Datsun and Isuzu combined to grab 3.34 percent of the diesel market in 1981. Isuzu, which began selling in the U. S. early last year, sold 10,368 diesel-powered I-Mark models. A spokesman said diesel sales could account for 80 percent of an anticipated 18,000 sales this year.

Datsun entered the diesel market last June with the introduction of a diesel-powered Maxima model. The company sold 6,610 diesel Maximas last year and has forecast sales of up to 14,000 diesel Maximas for 1982.

Volvo was unable to certify a 1981-model diesel car for the U. S. market and, subsequently, recorded a large drop in sales. A spokesman said that Volvo should sell about 6,500 diesel-powered cars this year.

Toyota, Datsun, VW offer new incentives

By Joseph Bohn
Marketing Editor

Datsun, Toyota and Volkswagen have launched new incentive contests.

The Toyota contest, called "Breaking Away," runs from Dec. 23 to April 1. It is a dealer trip contest, with 175 trips being awarded.

Dealers compete among themselves for high over objective in three groups, based on their size. Objectives are based on all new trucks.

Group one can win trips to Sydney and Melbourne, Australia.

Group two wins a Vancouver/Alaskan cruise.

Group three wins a trip to the island of Maui.

There is a fast start from Dec. 23 to Feb. 1. The dealership that attains its fast-start objectives receives two additional percentage points toward its objective at the end of the contest.

A second fast start runs from Dec. 23 to March 1. A dealership that achieves this fast-start objective receives one additional point toward its total objective.

There are two tie breakers. One is based on total car/truck sales; the other on total Celica sales, including Supra.

Datsun has a new "Full Throttle '82" contest running Jan. 8 to March 31. It is a dealer trip contest, but dealers have the option of taking merchandise instead.

The contest is based on total '81-'82 new vehicles, including cars and trucks.

• Dealers must purchase "full throttle" certificates, one for each unit in their objectives. The certificates cost $10 apiece. But dealers have the opportunity to receive a 25 or 50 percent refund on the certificates' cost by achieving certain bonus objectives.

Dealers are also required to set up an in-house incentive for sales people to get into the contest.

Essentially, the contest places dealers in two groups. Larger dealers compete in an open-ended competition against sales ob-

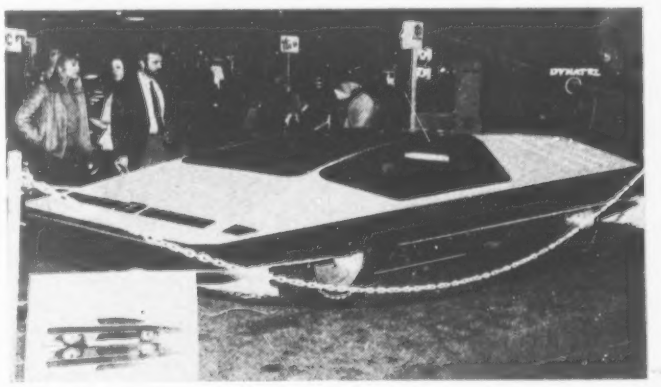
At Los Angeles Show

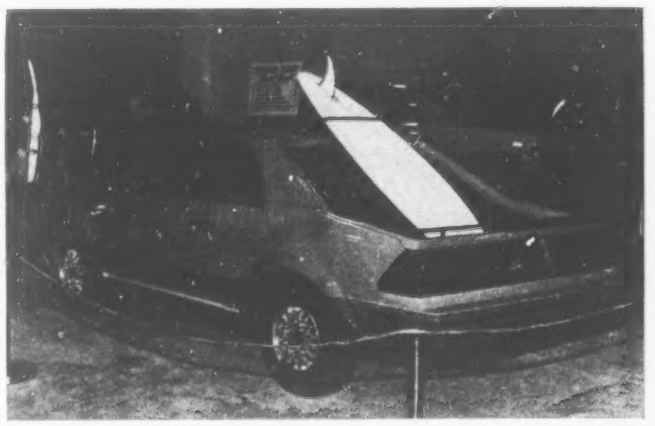
Looks like the real thing

The Gullwing, a replica of the Mercedes-Benz 300-SL roadster, is built by West Coast Auto Sales, Inc., Gardena, Calif. The fiberglass-bodied car is built on a custom-made chassis. Engine is a Chrysler 225-CID "slant six." Price is $50,000. Two or three will be built per month.



Porsche-powered Concordia II

The Concordia II, a design car from Bernard Beaujardin of Montreal, was one of the more unique autos at the Greater Los Angeles Auto Show, Jan. 2-10. Powered by a Porsche 914-6 engine, the car is of fiberglass/steel construction and features digital instrumentation and secondary gauges and controls that slide out of sight into the dashboard.



Ford's concept 'Sport Truck'

Ford Motor Co. showed its Ford EXP "Sport Truck" concept vehicle at the Los Angeles show. The concept vehicle has a maximum cargo capacity of 600 pounds. The Los Angeles show, covering 350,000 square feet, was the largest ever for that city. Attendance figures also set records.

For Sentra, the 210 replacement

Nissan seeks diesel waiver

WASHINGTON. — Nissan is asking the EPA for a waiver from 1983 and 1984 oxides of nitrogen standards so it can bring in a new 1.8-liter four-cylinder diesel to power its replacement for the aging Datsun 210. The new car, known as the Sunny in Japan, is scheduled to arrive here early in 1983. It will be called Nissan Sentra.

Should the EPG give its approval — and there is every indication it will — the dieselized Sentra could prove a worthy competitor in the high-mileage contest that has until recently, been nearly the sole domain of Volkswagen.

Although slightly larger and heavier than the Rabbit, the

Mack honors Econodyne's originator

Alvin M. Fischer, left, product engineering vice president, Mack Trucks, Inc., presents a plaque displaying the Econodyne engine logo to Edward G. Bulpitt, senior project engineer—powertrain engineering at Mack's Powertrain Division, Hagerstown, Md. He suggested the name which characterizes the performance of the Charge-Air fuel-efficient diesels introduced in 1981.

IH dealers to market 3 IVECO light diesels

BLUE BELL, Pa. — Some International truck dealers will retail diesel-powered IVECO light trucks in the U. S. and Canada under a marketing agreement between IVECO Trucks of North America, Inc., and International Harvester.

Initially, International will offer three models to be designated the I-Series. With the exception of identification, the trucks will be identical to the Z-Series vehicles introduced by ITONA a year ago and marketed through its U. S. dealer body.

"These vehicles," said J. Patrick Kaine, president, IH Truck Group, "will complement the company's medium and heavy trucks and will provide major new sales opportunities in the emerging Class 2, 3 and 4 segments of the fuel-sensitive North American truck market."

Gross vehicle weights of the three models range from 9,995 to 14,880 pounds. Kaine said most of the trucks handled by International dealers will be marketed with van bodies.

Vocations served by these vehicles include wholesale and retail businesses such as furniture stores, florists, utilities, contractors, food distributors, leasing companies and package carriers, Kaine said.

"Our competition has neither the fuel-efficient diesels nor the space-saving low-front-entry designs in this weight range," he added.

• The I-1054 model is powered by a five-cylinder, air-cooled Deutz diesel, while a six-cylinder, water-cooled Fiat diesel is available in the I-1154 and the heavier I-1254 models.

The I-1054 and I-1154 models will be available in IH outlets as early as March, Kaine said, with the I-1254 scheduled for shipment later in the year.

The I-Series trucks will carry IH identification and model numbers in addition to the IVECO nameplate, similar to the marketing approach used by Chevrolet and GMC in the U. S. market, according to James R. Bostic, ITONA president and a

truck personnel

Sting and Zalokar are promoted at Mack

Mack Trucks, Inc., has announced the election of **Robert W. Sting** as executive vice president-international operations, and **Robert F. Zalokar** as senior vice president-product and engineering.

Sting joined Mack in 1978 as area vice president-Far East, Middle East and Africa. Previously he was truck-marketing services director at Chrysler International in London. Prior to his promotion, he was vice president-international operations for Mack.

Zalokar has been with Mack since 1959, starting as a research engineer for the Powertrain Division, and prior to his promotion was product-development vice president. He is co-inventor of the Mack air-suspension system for cabs.

2.25 million deliveries off 9.3 pct. from previous year

Sales drop in '81 smaller than '80

By Jack Walsh
Truck Editor

For the third straight year, retail sales of new trucks of all types in the U. S. in 1981 dropped below the year-earlier mark. The rate of decline, however, was under 10 percent for the first time since 1979.

During the year, according to preliminary reports, franchised dealers and factory outlets retailed 2,255,869 units, a decline of 9.3 percent below the 2,487,236 sold in 1980.

Sales also were down in all three market segments, with light trucks hurting the least. Compact-pickup deliveries rallied in the second half and ended the year slightly higher than the year-earlier totals, providing the only bright spot in an otherwise dismal year.

The non-captive imported compacts — Datsun, Toyota, Mazda and Isuzu—scored significant gains, overcoming the higher prices caused by the increased import duty with a much more aggressive marketing effort.

Sales of the captive imports—Chevrolet LUV, Ford Courier, Dodge Ram 50 and Plymouth Arrow — were down substantially in 1981 from the previous year, losing most of their ground in the final six months of the year.

Compact-pickup sales over the 12-month span totaled 523,619 units, an increase of 3.5 percent over the previous year's 506,410. There were three new domestic entries in this market segment during the year — the Jeep Scrambler, the Chevrolet S-10 and the GMC S-15.

The Scrambler, based on the Jeep CJ chassis, was introduc-

Table on Page 48.

ed in April and 7,815 units were sold through December. The S-10 and S-15 made their debut in November, and dealers sold 15,473 of the former and 2,314 of the latter.

Retailers of the non-captive compacts sold 279,584 vehicles during the year, an increase of 11.1 percent over the year-earlier 251,669 units. Sales of the captives were off 19.4 percent, from 228,878 in 1980 to 184,554 in 1981.

Light-truck sales during the year totaled 2,026,228 units, a decline of 8.5 percent from the previous year's 2,215,211. Mediums were down 19 percent, from 96,319 in 1980 to 77,975. Sales of

Compacts have vital '82 role

Compact pickup trucks built in the U. S. will play a major role in a rebound in light-truck sales in 1982, and very likely will be the determining factor in whether Ford will be the retail sales leader for a sixth consecutive year.

Thus far, the General Motors S-trucks, the Chevrolet S-10 and the GMC S-15, and the Omni/Horizon-based Dodge Rampage, are the only new domestic compacts on the market. The S-trucks are off to a record start. It's too early to measure the Rampage impact since it has been available only since Jan. 4.

The Volkswagen Rabbit compact, offered with both gasoline and diesel power, has done extremely well since its introduction late in 1979. In 1981, VW dealers sold 33,879 units, an increase of almost 33 percent over the previous year's 25,532.

The S-trucks were introduced officially early in November, and at year's end sales totaled 17,787 units—15,473 S-10s and 2,314 S-15s. Chevrolet expects to sell 225,000 units in the 1982 model year and GMC's target is 45,000.

Ford's all-new domestic compact, the Ranger, goes into production today (Jan. 18) in Louisville, with public introduction slated for March. The company is hoping to sell 300,000 of them in the truck's first full year on the market.

• Chevrolet outsold Ford in the last two months of 1981 and is counting on the S-10, plus its all-new 6.2-liter light-truck diesel, to keep the momentum rolling throughout the year and to enable Chevrolet to dethrone Ford.

The Ranger is one of the reasons that Ford is confident that it will repeat as the industry's No. 1 truck retailer in 1982.

"The drivetrain options and derivatives we will add to the Ranger line over the next year will assure us a healthy share of the growing personal-use/sport-truck compact market the Japanese have had largely to themselves," said Louis E. Lataif, Ford Division general manager, at a press conference at which Ford's 1981 sales results were announced.

"Ranger will appeal to both types of buyers," he added. "But its success as a personal-use vehicle is particularly important because a strong return of these buyers—who fueled the tremen-

Reading's Ready-Cap

Reading Body Works, Inc., Reading, Pa., has introduced the Ready-Cap, a new all-steel pickup cargo bed. It is designed for easy installation on conventional and compact pickup trucks.

But 9.3 pct. decline is better than 1980's drop

Year's truck sales dip to 2.25 million

Continued from Page 16

the heavies totaled 151,666, a decline of 13.7 percent from the year-earlier 175,706.

Sales of new trucks of all types in the final month of 1981 dropped 12.7 percent below the count for December, 1980. During the month, dealers retailed an estimated 150,215 units, compared with 171,992 a year earlier.

Heading into the new year, retailers had fewer unsold trucks in stock than on Jan. 1, 1981. The total this year was 559,334 units, a decline of 2.6 percent from the previous year's 574,045.

There were 503,410 light trucks in inventory on Jan. 1, off 0.8 percent from last year's 507,694 units. Mediums were down 17.6 percent, from 22,117 in 1981 to 18,234, and heavies totaled 37,690, a decline of 14.8 percent from the year-ago 44,234.

• Big Three truck dealers retailed 1,150,649 units in 1981, a decline of 11.8 percent from the year-earlier 1,984,612. December sales were off 21.1 percent, from 139,382 units in 1980 to 108,910.

Ford was No. 1 in truck sales in 1981 for the fifth straight year and the seventh time in the last 10 years. Its dealers sold 716,849 vehicles during the year, compared with 675,628 for Chevrolet.

Ford's 12-month total was down 9.8 percent from the previous year's 794,520 units. Included were 63,925 Courier sales, a drop of 17.2 percent from the 77,375 units retailed in 1980.

Chevrolet's 1981 count was off 10.7 percent from the year-earlier 756,491, and the total included 61,724 LUV sales, a decline of 30 percent from the previous year's 88,447.

In December, Chevrolet truck sales topped Ford's for the second consecutive month, 42,347 versus 38,570. The Chevy total was off 25.2 percent from the year-earlier 56,637, and the Ford count was down 32.6 percent from the 57,252 units retailed in 1980.

• Chevrolet dealers sold only 1,696 LUV pickups in the final month of 1981, almost 65 percent below the year-earlier 4,940. Ford Courier sales were down 16.4 percent, from 4,626 in 1980 to 3,869 units.

Chrysler Corp. and GMC Truck & Coach Division were the only Big Three truck producers to report sales gains for December. Twelve-month totals for both, however, dropped below the comparable 1980 results.

In December, Dodge and Plymouth dealers retailed 15,292 light trucks, a gain of 9.8 percent over the previous year's 13,933. During the month, 1,907 Dodge Ram 50 compact pickups were sold, down 8.6 percent from the year-earlier 2,086. Sales of the Plymouth Arrow pickup were off 30 percent, from 779 units in 1980 to 546.

For the year, Dodge/Plymouth sales were down 25.3 percent from the 1980 count, 186,621 versus 249,766. Ram 50 sales in 1981 totaled 25,174, off 43.6 percent from the previous year's 44,640 units. The Plymouth count was down 52.6 percent, from 18,416 in 1980 to 8,728.

GMC dealers retailed 12,701 vehicles in the final month, an increase of 9.9 percent over the year-earlier 11,560. The 12-month total was off 6.7 percent, from 183,835 in 1980 to 171,551 units.

• Sale of Jeep four-wheel-drive trucks in 1981 dropped 18.7 percent below the year-earlier level, 63,275 versus 77,852. December sales totaled 4,636 units, a decline of 16.6 percent from the year-earlier 5,561.

Volkswagen of America reported gains in Rabbit pickup sales for both the month and calendar year. During the month, 2,833 units were retailed, up 35.1 percent from the previous year's 2,097. The 12-month total of 33,879 units was 32.7 percent greater than the year-earlier 25,532.

Mercedes-Benz Truck Co. said its dealers sold 482 medium and light-heavy trucks in December, its best month ever, and an increase of 7.7 percent over the year-earlier 350. The 12-month count was 4,054 units, three higher than the previous year's 4,051.

December and calendar-year increases were reported by three of the four independent Japanese truck distributors in the U. S.

Toyota dealers retailed 11,624 vehicles during the month, an increase of 47.5 percent over the year-earlier 7,879. The full year's total of 137,490 units was 4.4 percent higher than the 131,648 reported for 1980.

Datsun's December sales were 71.6 percent higher than the previous year, 10,424 versus 6,074. The 1981 total was 115,334, an increase of 3.7 percent over the year-earlier 111,246 units.

Mazda dealers sold 898 trucks in the final month of the year, a gain of 59 percent over the year-earlier 565. The 12-month total of 16,801 units was 91.5 percent higher than the 8,775 retailed in 1980.

December sales of Isuzu pickups totaled 1,184, bringing the calendar-year count to 9,959 units. Distribution of these vehicles in the U. S. did not start until late in the second quarter of 1981.

truck watch

Continued from Page 16

dous growth in truck sales during the mid-'70s—will provide a good shot in the arm for overall truck sales."

Chevrolet and GMC also are counting on the personal-use buyer to spur sales of the S-trucks in the coming year.

But in the short time that these vehicles have been on the market, according to Jimmy Perkins, Chevrolet's assistant general sales manager, there has been no real sign that this type of buyer is ready to come back strong.

"We've found that most buyers to date are people who need a pickup in their line of work, but don't really need a vehicle as large as the conventional pickup," he said.

"The most popular S-10s are those with the 1,500-pound payload capability and the V-6 engine, both options," he said. "Quite a few have been sold with a trailer hitch, indicating that some people plan to use them to haul recreational vehicles as well as light commercial trailers."

Reilly elected '82 chairman of auto info council

SOUTHFIELD, Mich.—J. Bernard Reilly has been elected 1982 chairman of the Automotive Information Council. Reilly is vice president of automotive marketing for Eaton Corp.

As AIC chairman, Reilly succeeds Dunbar Abston Jr., chairman of Parts, Inc.

Elected vice chairman of AIC was Lawrence J .Lombardo, executive vice president of sales and marketing for Firestone Tire & Rubber Co. Donald J. Whitlock, president of Whitlock Enterprises, was named AIC first vice chairman.

Other officers are Robert C. Calderone, vice president of aftermarket sales, Arvin Industries, treasurer, and Fred J. Pisciotta, vice president of APS, Inc., secretary.

It continues as a top choice in Europe

Fiat launches third-generation 127

By Jan P. Norbye
Staff Correspondent

TURIN. — Third generation but not necessarily last, for regardless of the arrival of Fiat's slightly bigger and more modern Project Uno next year, the 127 remains an attractive offer in the low-priced end of the European family-car market.

Better than many rivals, it has managed to secure a strong place as the only car for low-budget households, and an equally favored position as the first choice of a second car in two-car families.

It can be expected to keep a big share of these clienteles after the Uno becomes available. The Uno is not planned as a direct replacement for the 127, and Fiat will produce the two side by side for as long as demand for the 127 continues at a sufficiently high level.

With the third-generation 127 in production, it is now less urgent for Fiat to complete the development and tooling for the Uno. Fiat is sensibly refusing to rush the car into production, and hints of a revised timetable for the Uno are being dropped.

• The 127 Mark III stands out as having been visibly rejuvenated for an extremely low investment. The main body structure is unaffected by the skin changes, as the modifications have been held mainly to bolt-on parts, such as the front and rear bumpers, grille assembly, hood and rear hatch. Two and four-door models are offered.

The 127 Diesel continues with the old design, since both the sedan and wagon are made in Brazil to 147 specifications. The Mark III is produced only at the Mirafiori plant.

As the Mark III goes on sale, Fiat will produce its 5-millionth 127 since this series made its debut in the spring of 1971. This figure breaks down to 3,193,236 cars built in Italy, 1,243,469 by SEAT in Spain, and 565,076 units in Brazil.

In addition, Fiat has built 84,575 Fiorino vans at Mirafiori, using the 127 as a base—totally for the chassis and from the front bumper to the B-post for the body shell.

The new body parts for the Mark III are lightweight. For instance, the grille is made of plastic resin, the bumpers are polypropylene mouldings, while the hood and rear hatch remain pressed-steel (and glass).

The 127 range has been split into three trim levels—Super, Special and Sport, each with its own interior design and new, specific instrumentation.

Engine availability includes the faithful old pushrod-OHV 903-cc engine inherited from the 850, the SOHC 1,050-cc made in Brazil, and a larger version of the latter with 1,301-cc displacement.

The latter is used only for the 127 Sport in combination with a new five-speed transmission. The five-speed gearbox is also standard with the 1,050-cc engine. On all models, the transmission now has a two-rod shift control giving quicker and more precise shifts. The fifth (overdrive) speed, along with revised carburetion and improved aerodynamics, helps the 127 make new gains in fuel economy.

Due to the new bumper and hatch designs, the drag coefficient has been brought down to a competitive 0.44 (0.42 for the 127 Sport). Gasoline mileage at a steady 56 MPH ranges between 38.5 and 42.7 MPG, according to power train.

Fiat 127 is upgraded

With a simple, low-cost facelift and new interiors, Fiat has moved the 127 slightly up-market and away from any overlapping with the Panda. The 127 is available in three trim levels: Super, Special and Sport. It is not available in the U. S.

Metro Auto Auction celebrates big

Metro Auto Auction of Kansas City celebrated its seventh anniversary by opening a new five-acre customer parking lot and staging the largest sale in its history: 1,682 cars consigned, 1,024 cars sold, followed the next day by a Ford factory sale in which all 300 cars offered were sold. Refreshments and prizes added to the festivities. Metro subsequently has had two holiday parties to stimulate business and thank its customers.

27.88 pct. for October

Import registrations dip, but share climbs

By Jenny L. King
Staff Writer

Registrations of new imported cars climbed in market penetration in October compared with their standings both in September, 1981, and October, 1980, according to figures compiled by R. L. Polk & Co.

October import registrations reached 182,410, or 27.88 percent of the total. Imports accounted for 27.45 percent of the September total and 26.25 percent of the October, 1980, market.

In actual numbers, the October figure of 182,410 was down 6.98 percent from the year-earlier 196,107. It also was down from September by a margin of 12.90 percent. There were 209,430 new import registrations that month.

Greatest import penetration in the first 10 months of 1981 was 30.58 percent in May.

Registrations for the first 10 months of the year were 2,078,171, down 0.78 percent from 2,094,566 in 1980. Imports accounted for 28.79 percent of all U. S. new-car registrations for the 10-month period, up slightly from 28.61 percent the preceding year.

Datsun succeeded Toyota as top import in October. Its share of the import segment was up 1.42 percentage points, to 20.53 from 19.11. Toyota captured 19.64 percent, down 0.48 percentage points from 20.12 percent. Third-place Honda was down 0.59 percentage points and fourth-place Volkswagen slipped 0.02 percentage points.

Mazda, Subaru, Volvo, Mercedes-Benz, Audi and BMW increased their shares of the October market compared with year-ago standings.

The top 10 imports accounted for 88.32 percent of registrations in October, up from 87.96 percent a year earlier.

Japanese nameplates captured 74.18 percent of October import registrations, up from 71.39 percent in 1980. Japanese year-to-date penetration was 75.22 percent, up from 74.17 percent.

German-built imports were responsible for 17.98 percent of the import total, down from 20.27 percent in October, 1980. The German year-to-date slice was 17.40 percent, down from 18.62 percent.

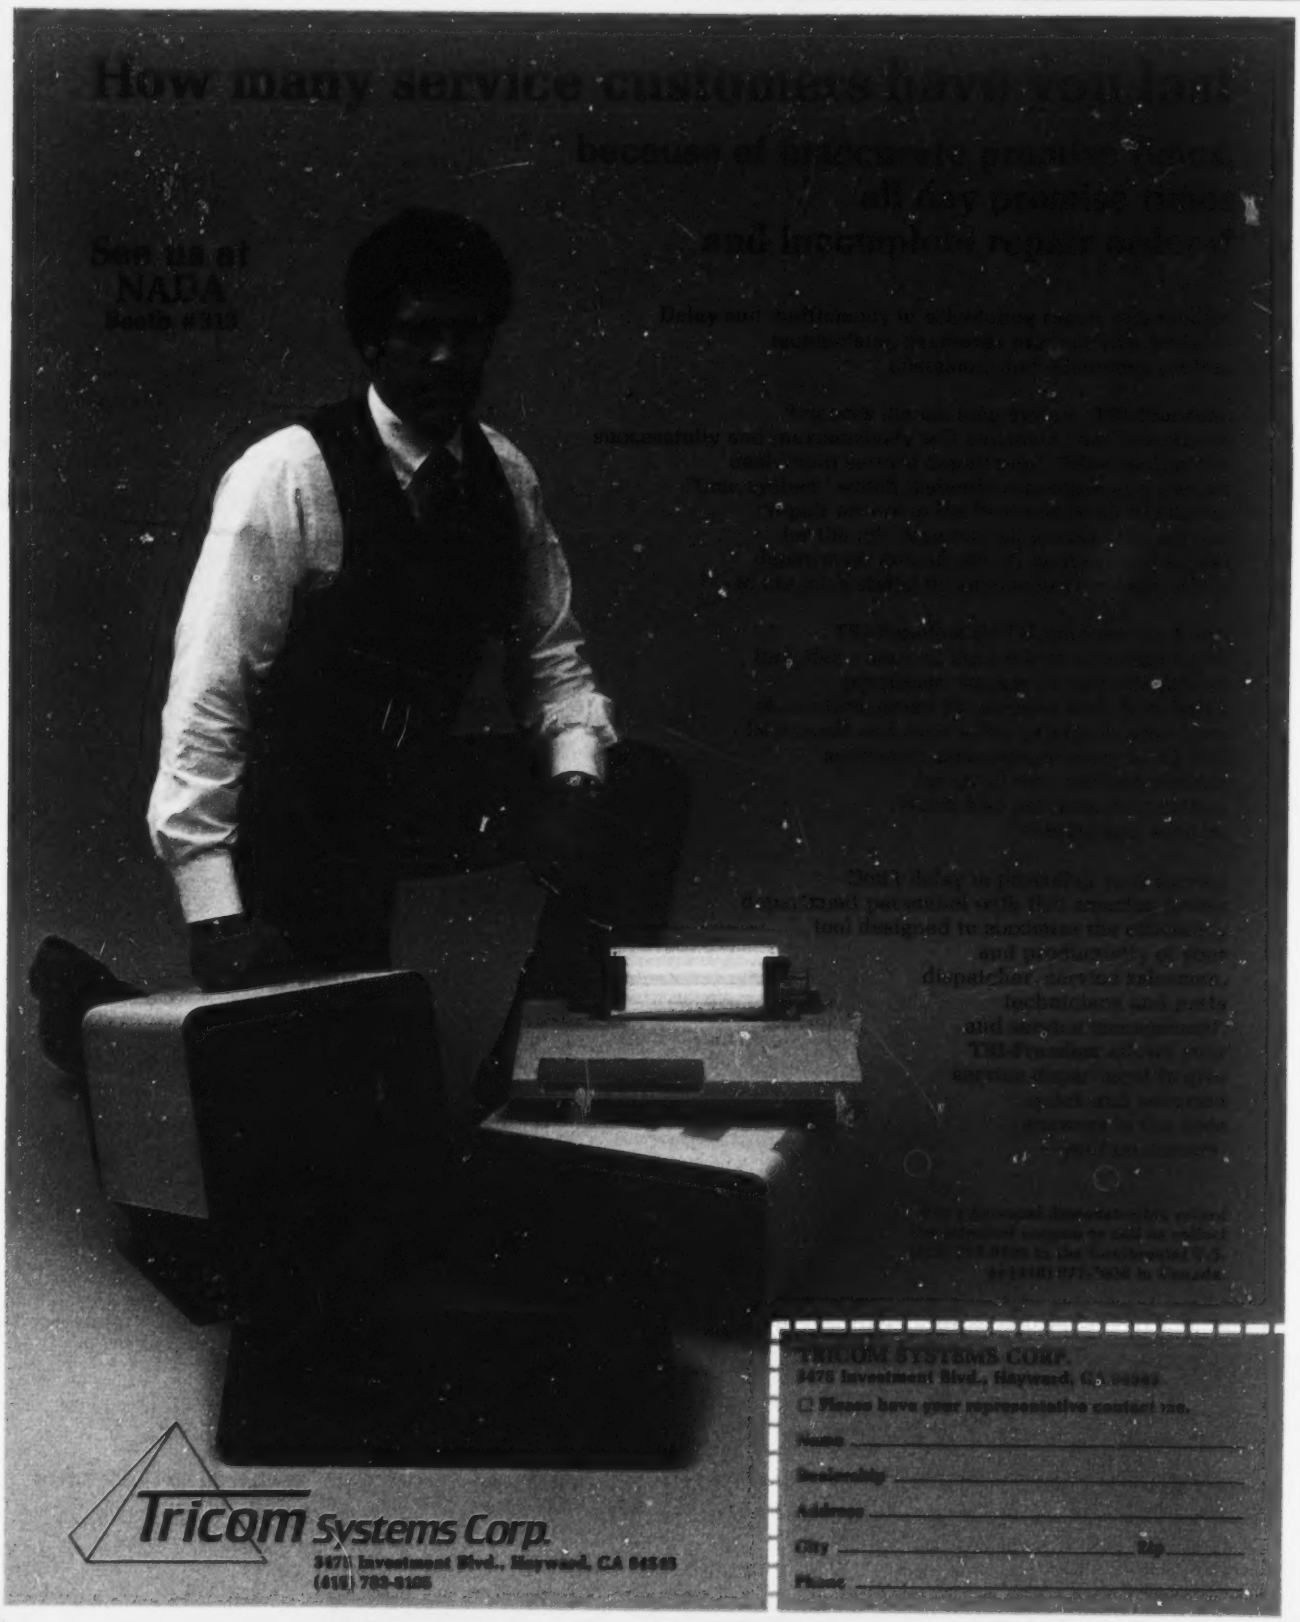
Hightower promoted

NEW YORK.—Cato S. Hightower Jr. has been promoted to control branch manager of the General Motors Acceptance Corp. office in Lombard, Ill. He formerly was regional dealer relations manager with headquarters in Wilmette, Ill.



The aim: To boost sales and ease layoffs

GM to trade price cuts for benefit concessions

Continued from Page 1

would not necessarily mean car prices would not rise during its duration because supplier prices and other costs could rise.

He said the proposal "could usher in a new era of labor-management cooperation because it addresses the heart of the problem in our industry today—noncompetitive labor costs and inflated car and truck prices."

The UAW also presented the plan to Ford Motor Co. which is reviewing the proposal, but Chairman Philip Caldwell is insisting Ford "will remain competitive in the marketplace." He said he is not "closing the door" to any ideas.

While the top UAW and GM officials have been talking about cutting prices in exchange for concessions since Nov. 14, the union dropped the plan on Ford last Tuesday (Jan. 12).

Caldwell said it costs $1,400 more to build a small car in the U. S. than in some overseas countries and "we need to get the $1,400 under our belt sooner or later on a permanent basis."

Most analysts feel that if Ford does not accept the proposal it will put itself at a competitive disadvantage in the marketplace and are expecting Ford to adopt the plan. Fraser said he hoped Ford would take that into consideration while deciding on the proposal.

Ford announced extended warranties on Escort and Lynx and a 5-percent rebate on those cars on the same day the price-cut proposal was submitted.

Many labor observers see the price cut as a way to sell the contract to the workers, especially those at GM, who have voiced strong opposition to making any concessions or even beginning early talks. At the UAW Ford and GM Council meetings in Chicago Jan. 8, both councils complained about the high cost of cars. They were worried that any concessions made by the workers would go to the company and prices would not be reduced.

Speaking of the price-cut proposal, Fraser said, "If you increase sales, you increase production. If you increase production, you increase productivity and efficiency and generate more profits . . . and generate more jobs."

Another selling feature of the GM negotiations is Fraser's proposal to have the current agreement kick in before the expiration of the new agreement.

He said, "Part of the agreement will be that if we enter into an agreement for X-number of months, before the expiration of that agreement the economic provisions of the current agreement will be restored —prior to the expiration date of that agreement. As of now, we haven't bargained out how much prior, but the current agreement will be back in place before we next go into negotiations."

In that sense, the newly negotiated contract will be temporary, he said.

• The principles adopted by GM also require an equality of sacrifice from all non-UAW GM groups. Smith told reporters last week he is willing to take a wage cut to hold up his end of the sacrifices required. Smith's salary is about $400,000 a year.

Caldwell makes $416,790 a year. Both executives receive bonuses in a good year. There haven't been any good years lately.

It is also expected that GM will at least discuss cutting or eliminating the dividend for the quarter in its February board meeting. Last week, Ford's board of directors voted not to pay a dividend for the first quarter.

Since GM has already agreed to the principles put out by the UAW, the union seems to be doing most of its pattern negotiating there and hopes to keep the concurrent, pattern contract systems intact. Ford, which did not receive those proposals until almost two months later, is behind GM in its contract talks.

Late last week, GM put its demands on the table and Owen Bieber, UAW vice president and director of the GM department, said the union was "disturbed and shocked" by the company's early proposals for concessions.

That kind of language is usually reserved for the company in normal bargaining times, but with the world turned upside down in negotiating, the union sees itself as the target with the company slapping its demands on the table.

Fraser said GM officials asked for concessions in almost every phase of the current pact.

"If those examples are real, they would pay the consumer for taking them (the cars)," Fraser said.

He has said the concessions will not involve wage cuts. In past interviews with Automotive News (Oct. 26, 1981), both Peter J. Pestillo, Ford labor relations vice president, and Alfred S. Warren, GM labor relations vice president, said costs can be reduced without touching wages. They said they want $8 an hour worth of concessions or exchanges—the labor cost disadvantage they say they have with the Japanese. A more realistic figure would be around $5 an hour.

Non-wage exchanges could be in eliminating all remaining paid personal holidays, changing health and life insurance plans, providing phased-in benefits and wages based on seniority, cutting SUB fund benefits after an employe has been drawing for a certain amount of time and changing the pension plans.

Ford and Chrysler bicker over who's on second

By Jenny L. King
Staff Writer

Domestic new-car sales were awful in the first 10-day period of 1982, and Chrysler Corp. and Ford Motor Co. were bickering over who had better—and more honest—sales.

Chrysler Corp. rejoiced in a Jan. 13 news release that its 10-day sales total beat out Ford for the first time, except during strikes, since such period reporting began back in 1953.

Chrysler's announced sales total of 17,493 included 2,768 Mitsubishi-built imports. Ford yelled "foul." Ford had sales of 17,033 domestic cars in early January and could not include the Fiestas from Germany which it always had done when they still were being sold.

Sales by the five major U. S. auto makers totaled 101,199 in early January. There were only seven selling days, yielding a 14,457 daily selling rate. A year ago 128,041 new cars were retailed in eight days, with a 16,005 sales average per day.

Domestic sales were down 20.96 percent year-to-year, down 9.67 percent daily rate. They were the lowest since the 93,235 reported in 1975. Best for the period was 202,453 in 1966.

• All five auto makers were down in year-to-year comparisons. Chrysler Corp. was up on a daily-rate basis. General Motors was down 19.02 percent, to 66,281 from 81,845 in 1981 (down 7.45 percent daily rate). Ford Motor Co.'s sales of 17,033 were down 31.68 percent from 24,930 (down 21.92 percent daily rate).

Chrysler Corp. reported domestic sales of 14,725, down 8.99 percent from 16,179 last year, but up 4.05 percent on a daily-rate basis. Volkswagen of America was down 57.38 percent, to 1,060 from 2,487 (down 51.45 percent daily rate). Estimated sales for American Motors were 2,100, down 19.23 percent from 2,600 (down 7.69 percent daily rate).

GM earned 65.49 percent of the early-January domestic market, up from 63.92 percent in 1981. Ford sales accounted for 16.83 percent of the market, down from 19.47 percent. Chrysler cornered 14.55 percent of the market, up from 12.64 percent. AMC stood at 2.08 percent, up from 2.03 percent, and VWoA slipped to 1.05 percent from 1.94 percent.

Larger-car specialists prevailed in the makes sales race. Chrysler was up 59.89 percent, Cadillac was up 31.21 percent and Lincoln was up 18.85 percent.

On the minus side were: VWoA, down 57.38 percent; Oldsmobile, down 47.18 percent; Ford, down 37.16 percent; Imperial, down 34.12 percent; Plymouth, down 31.05 percent; Mercury, down 23.60 percent; Pontiac, down 23.10 percent; AMC, down 19.23 percent; Buick, down 17.39 percent; Chevrolet, down 10.84 percent, and Dodge, down 5.98 percent.

Chrysler boosts import prices $274 for 1982

DETROIT. — Chrysler Corp. has raised prices of its imported cars and pickup trucks an average of $274, or 4.0 percent, for 1982.

The vehicles, all made by Mitsubishi of Japan, are the Dodge Colt and Challenger, the Plymouth Champ and Sapporo, the Dodge Ram 50 pickup and the Plymouth Arrow pickup.

The $274 boost is for the average equipped vehicle. In addition, destination charges have been increased an average of $12 per vehicle.

The new Colt/Champ four-door hatchbacks carry a sticker of $5,710 for the base units. The Custom models are $6,153.

The Colt/Champ two-door hatchbacks start at $5,443, up $180 over the final prices of the '81s. The Deluxe models are $5,800, up $241, and the Custom versions are $6,122, up $302.

The Challenger and Sapporo sport coupes are $8,043. That is a hike of $371 for Challenger and $455 for Sapporo.

Dodge Ram 50 and Plymouth Arrow pickups start at $6,408, an increase of $206. New for '82 is the Power Ram 50 four-wheel-drive pickup at $8,361.

New-car stock swells to highest level in history

Continued from Page 1

opened, up from 88½ days Dec. 1, and the stock of luxury cars was good for 81 days, up from 61 days a month earlier.

The Jan. 1 inventory was divided this way by size segment: Subcompact, 30.45 percent; compact, 23.81 percent; intermediate, 29.54 percent; standard, 10.69 percent, and luxury, 5.51 percent.

A month earlier, the inventory was divided as follows: Subcompacts, 30.60 percent; compact, 24.01 percent; intermediate, 28.24 percent; standard, 11.34 percent, and luxury, 5.81 percent.

• The Jan. 1 days' supply figures by market segment were:

Subcompact — Rabbit, 83; Eagle SX/4, 86; TC3, 127½; Chevette, 129; Omni, 136½; Horizon, 140; Escort, 140; LN7, 148; Lynx, 161; Spirit, 176; T1000, 197½; EXP, 207; Dodge 024, 260; Cavalier, 276, and J2000, 279.

Compact — Eagle, 67; Reliant, 86; Concord, 92; Fairmont, 92; Aries, 94; Skylark, 94; Zephyr, 109; Citation, 110; Omega, 112; Firebird, 138; Phoenix, 145; Mustang, 148; Camaro, 154, and Capri, 179.

Intermediate — New Yorker, 55½; Cutlass Supreme four-door, 70; Cougar, 71; Malibu, 71; Regal four-door, 78; Cordoba, 84; Diplomat, 91; Granada, 92; Regal coupe, 97; Gran Fury, 98; Cutlass Supreme coupe, 101; LeBaron, 105; Bonneville / LeMans, 105; Thunderbird, 114; Mirada, 115; Grand Prix, 116; Century, 118; XR-7, 144; Monte Carlo, 150; Dodge 400, 169; Cutlass Ciera, 181; Celebrity, 263, and Pontiac 6000, 338.

Standard — Pontiac, 23; Olds 88, 47; LeSabre, 61; Olds 98, 64; Mercury, 67; Electra, 71; Ford, 72, and Chevrolet, 91.

Luxury — Eldorado, 44; Lincoln, 47; Mark VI, 55; Toronado, 71; Seville, 72; Riviera, 82½; Continental, 101; Cadillac, 116; Corvette, 117; Imperial, 136, and Cimarron, 155.

117,945 cars built in first two weeks of 1982

Car production 48 pct. below 1981

By Patricia Hoffman
Staff Writer

The first 10 days of 1982 auto production find the makers off to a slow start. Output is substantially below the comparable 1981 period.

An abundance of inventory forced several asesmbly points to extend holiday downtime. Auto production to date is 117,945, down 48.57 percent from the 229,346 units completed in the first two weeks of last year.

As the assembly plants gradually return to work, last week's estimated output was 67,037 units, up 31.68 percent from 50,908 the previous week. But it was 45.30 percent below 122,551 in the comparable 1981 period.

Production of the Buick Skyhawk-J and Oldsmobile Firenza began last Monday (Jan. 11) at General Motors' Leeds facility. For the week, 496 of each of the newest J-cars were built. Leeds, which was idled for the changeover Dec. 4, also builds the Pontiac J2000.

Also back last week were GM's Flint and Linden facilities.

Operations resumed last week at Ford's St. Louis point, making it the company's second (along with the Wixom plant) to return since the holidays.

Chrysler Corp.'s Belvidere, Jefferson and St. Louis points, along with American Motors' Kenosha facility also returned last week.

Still idle are Chrysler's Newark plant; Ford's Atlanta, Chicago, Dearborn, Kansas City, Lorain, Metuchen, San Jose and Wayne points; GM's Tarrytown, Framingham, Lakewood, Wilmington, Janesville, Lansing (G-body only), Baltimore, Fremont and South Gate facilities; Volkswagen of America's Westmoreland point, and Checker Motor's Kalamazoo plant.

Production breakdown for the week by company is: GM, 76.57 percent; Chrysler, 15.51 percent; Ford, 4.12 percent, and AMC, 3.80 percent.

Foote elected chairman of autobody supply group

TEANECK, N. J. — The Autobody Supply & Equipment Manufacturers Council elected the following officers for 1982 at its recent fall meeting.

Robert T. Foote Jr., vice president, Blackhawk; Applied Power, Inc., vice chairman; Thomas W. Dalton, president, Sharpe Mfg. Co., vice chairman; and Gary A. Oatey, president & chief operating officer, Oatey Co.; Robert T. Stahmer, national sales manager, Nason Automotive Division, O'Brien Corp., board members. Incumbent board members are Thomas F. O'Brien, national sales manager, Hennessy Industries — CP Tool Co., Auto Service Group; and Donald J. Scranton, president, Sem Products, Inc.

UAW lays out its demands for Harvester concessions

CHICAGO. — The UAW's International Harvester Policy Committee said last week the company must meet several demands before it will consider a request for a $100 million cut in labor costs.

In a statement following a meeting with IH officials, the union said it would be "impossible to respond to the proposal . . . until such time as the company takes steps to address several critical concerns of the union membership."

Those concerns include job security, eventual reimbursement of any concessions, the need for "equality of sacrifice" among all Harvester employes and the "outrageously high salaries" paid senior executives.

The union also charged that Harvester has too many supervisors for the number of workers employed, and was critical of such management practices as moving work from one location to another and the sourcing of some parts from outside firms.

Harvester called the hour-long meeting "a meaningful beginning" and said it will discuss the union's concerns at another session set for Wednesday (Jan. 20). The firm added that it also will provide additional financial information.

Harvester asked the union last November for the $100 million in concessions by Oct. 1, when the union's contract ends. The company proposed elimination of the $2.10-an-hour cost-of-living allowance, the 3 percent pay raise that took effect Oct. 1 and certain other benefits.

Canadian output rises for week, but trails 1981

Canadian auto and truck production last week took a substantial jump over the previous week's total as assembly points continue to return from extended holiday downtime.

The estimated car output last week was 8,914 units, a gain of 130 percent over 3,875 the previous week, but down 38.82 percent from 14,569 in the comparable 1981 week.

During the first 10 days of production for 1982, the auto makers have completed 12,789 units, a 56.21 percent decline from 29,205 built the first two weeks last year.

Last week, the truck makers targeted output at 8,516, about 3½ times as many as the 2,412 built the previous week, but down 21.87 percent from 10,900 units in the comparable week last year.

The truck manufacturers turned out 10,928 units the first 10 days of 1982 production, down 50.06 percent from 21,883 trucks the comparable period last year.

Ford Motor's Oakville car point is slated to return today (Jan. 18), and Ford's St. Thomas plant is scheduled to resume Jan. 25. General Motor's Oshawa (lines one and two) car point returns today, so does Ford's Ontario truck facility.

Truck production up; only 5 plants idle for week

While the new year's first 10 days of assembly proved unfavorable for the domestic truck makers, the return of several assembly points helped boost last week's total substantially from the previous week's output.

During the first two weeks of 1982, the truck makers finished 50,804 units, a drop of 19.25 percent from 62,917 in the comparable period last year.

Last week, output was targeted at 30,518, up 50.4 percent from 20,286 trucks the previous week, but down 10.13 percent from 33,957 in the comparable 1981 week.

All but five truck assembly points were working last week. Those still idle were Ford Motor's Kansas City, Norfolk, San Jose and Twin Cities facilities, plus Volkswagen of America's Westmoreland point.

Peel moves to GMAD as regional plant chief

WARREN, Mich.—William W. Peel has been appointed a regional plant manager for General Motors Assembly Division. He succeeds Robert K. Bates, who has retired after 42 years with GM.

Peel has been with GM of Canada since 1960 and has been regional manufacturing manager since last July.

Auto talks fizzle; UAW may go to Ford for pattern

By Marjorie Sorge
Labor Editor

DETROIT. — The UAW and General Motors were unable to reach a settlement last week and broke off negotiations. However, the way still was left open for a possible pattern agreement at Ford Motor Co.

After 10-days of talks, UAW President Douglas A. Fraser said GM and the UAW were unable to agree on economics, outsourcing job security or the length of the agreement and talks were recessed.

Later, UAW negotiators at Ford also voted to suspend negotiations until after the UAW GM and Ford Council meeting in Washington, D.C. last Saturday (Jan. 23).

UAW Vice President Donald Ephlin, director of the union's Ford department, however, said he is confident the union will resume negotiations with Ford next week.

"At Ford we only had two proposals on the table and we have not negotiated on either one of them" he said. "And therefore we would like the opportunity to do some bargaining and that's the reason I anticipate the Ford Council will tell us to come back here."

The Ford and GM Councils were scheduled to make recommendations on continued bargaining last Saturday. They have the option of continuing negotiations with the companies or suspending them until July, when bargaining would normally begin on the current contract, which expires Sept. 14.

In a random survey of some GM Council members, it seemed a resumption of bargaining at GM was less likely than at Ford.

If the GM Council should vote against continued negotiations and the Ford Council agreed to continue, it could result in a short-term three-tier labor cost structure if an agreement with Ford was reached before negotiations began with GM.

The UAW has been against adding another tier to the wage structure but a short-term situation might be agreeable. The split in labor costs came when concessions were given to Chrysler to allow it to qualify for federal loan guarantees.

While Fraser would give no idea how he thought the councils might vote, he said he would tell the GM Council to decide on the basis of what the committees reported had been negotiated at GM. However, he said he would be inclined to tell the Ford workers to go their own way, no matter what the GM Council does.

"The delegates have to ask themselves the question, and answer that question for the membership of this union . . . are you better off going forward now or is it better to wait until September of 1982 to try and conclude an agreement?" Fraser said. "That is the basic tactical question we have to ask."

Ford's chief negotiator, Peter

Detroit show cars

Chrysler 'Stealth' bows

The Chrysler "Stealth," a two-seat sports concept car, had its first public showing at the Detroit Auto Show last week.

Powered by a turbo'd 2.2-liter

Stealth's fiberglass body sits on a modified Chrysler K-car chassis. Powertrain is a turbocharged 2.2-liter four with multi-point fuel injection, driving the front wheels through a five-speed transmission.

Souped-up Century

Molly Designs, of Santa Ana, Calif., took a 1982 Buick Century and transformed it into this concept vehicle. The car features completely blacked-out trim, plastic-covered headlamps and Goodyear NCT tires on Epsilon three-piece modular wheels. The car was on display at the Detroit Auto Show.

Unsold supply of import cars rises again to 60½-day stock

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. continued to climb during December and stood at a 60½-day supply Jan. 1, up from a 55-day stock a month earlier.

While that inventory was the heaviest the imports have had in the past 12 months, it was virtually on target as the ideal import stockpile—heavy enough to sustain a solid sales pace, but not so heavy as to be burdensome.

The supply of new imported pickup trucks on hand Jan. 1 was quite heavy, however, at 108 days, up from 94 days a month earlier.

The inventory of new imported vehicles Jan. 1 totaled 383,228 cars and 133,256 trucks, a combined 68-day supply. This compared with 349,353 cars and 118,913 trucks in stock a month earlier, a 61-day supply.

While the import new-car stockpile was close to the ideal, the stockpile of new U. S.-built cars had soared to a record peak of 107 days Jan. 1.

• Although the overall supply of new imported cars was very well balanced, there were some imbalances among the individual makes.

Toyota for example, had built up its meager stockpile, but it was still very lean Jan. 1 at a 26-day supply. Subaru and Honda also had inventories on the short side at 36 and 39 days, respectively.

Datsun, on the other hand, had a strong 67-day supply of new cars Jan. 1 and Mazda had a 79-day supply. Isuzu's new-car stockpile was good for 92 days while Chrysler Corp. had a heavy 152-stock of Mitsubishi-built cars.

The inventory of Japanese-built new cars in the U. S. totaled 267,238, a 52½-day supply Jan. 1.

The stockpile of West German-built new cars totaled 64,135 new cars Jan. 1, a 77-day supply.

This included rather lean inventories of the luxury Merce-

breaking news

CHIPS shops Camaro/Firebird, Mustang GT

SACRAMENTO. — The California Highway Patrol may buy some 400 Chevrolet Camaro Z-28, Pontiac Trans Am or Ford Mustang GT pursuit cars this year. Requirements: The vehicles must have minimum top speed of 120 MPH, go from zero to 60 MPH in less than 10 seconds and hit 100 MPH in less than 30 seconds. Specifications allow at least 200 to be equipped with manual transmissions. That qualifies Mustang GT which is not sold with an automatic.

Nissan calls for renewal of '81 quota levels

TOKYO. — Nissan President Takashi Ishihara, speaking for Nissan only and not for the Japanese Automobile Manufacturers Assn. he also heads, said Japan would agree to keep its vehicle export levels at the 1.68-million-unit level negotiated last year. U. S. Congressmen visiting Japan had asked the Japanese government not to increase vehicle exports for 1982.

Meyers is odd man out in top-level shakeup

Higher profile for French at AMC

By Kathleen Hamilton
News Editor

SOUTHFIELD, Mich. — The top-level shakeup at American Motors that left a former Renault executive as AMC president and Chairman Gerald Meyers out in the cold with only a seat on the board was a logical enough extrapolation of the path AMC and Renault have been traveling.

The irony is that Meyers, the man most responsible for the alliance that kept AMC alive — albeit with a decidedly French accent—is the odd man out.

And the result of the shakeup is clearly a stronger, more visible role for the French company that owns a 46-percent stake in AMC and holds an option that could make it the majority stockholder.

Although the details of the Jan. 15 board meeting are being kept close to the vest by those in attendance, the meeting ended with Meyers holding only a board seat and his $385,000 a year salary for the remainder of his four-year contract, negotiated in 1980.

• The new chairman and chief operating officer, former president W. Paul Tippett, holds onto the supervision of interna-

Hints of price cuts blamed

How labor talks stalled action in showrooms

By Jenny L. King
Staff Writer

The possible renegotiation of the labor contract between General Motors and the UAW, with hints of a new-car price cut, has frozen the sales of new GM products more solidly than any masses of Arctic air ever could.

Last week, before talks broke off, AUTOMOTIVE NEWS contacted GM dealers in several states to get a reading on mid-January sales and showroom traffic. In summary, there is very little of either.

There was, however, a spirit of confidence voiced by many dealers. They admitted that times are worse than tough, but they also thought that if a new accord is reached and includes smaller price tags for cars, business will heat up quickly.

Dealers, though they did not specify the same amounts, agreed that generous price cuts — cuts of at least $600, maybe as much as $1,200 — definitely would stimulate sales. But even though cuts would be retroactive to midnight, Jan. 12, people are hardly looking, and they are not buying.

"Some customers are even refusing to take deliveries," said an Oldsmobile dealer in the Detroit suburb of Grosse Pointe Park.

"They want to get a rebate on cars ordered before this all began," said the dealer, who was discouraged by a complete absence of showroom traffic. He has operated under his current franchise less than one year.

• Tom Weil, general manager at Phil Tolkan Pontiac in Milwaukee, is convinced that pent-up demand exists and that it's worth waiting for.

"I'm optimistic," said Weil. "My outlook is once we get through this dismal period, it will again be fun and prosperous to sell cars.

"In our 25 years of business we have sold 80,000 cars. There are said to be one million cars from '75 and earlier in Milwaukee. These people are going to have to buy something. It's like great pressure building up on one side of a dam," he said.

Weil said he sees a shortage of vehicles in the near future, which will contribute to a very strong used-car market. This is the time to buy up sturdy used cars to sell to customers who can't afford new ones, he said.

"I think the GM price cut will have to be between $750 and $1,200 to be significant," said Weil.

Jim Miles, a Time magazine Quality Dealer nominee for Tennessee who holds Oldsmobile, Cadillac and Honda franchises, said a GM price reduction should be $600 to $800. "If it's only $100, they might as well forget it — it won't help," he said.

A generous price cut "could be a real move in the right direction," said Miles. "It's too early to tell how much of an impact the present talks are having on our sales. We are going to maintain a positive attitude."

Miles did not foresee increased sacrifices being asked of dealers. "We've been tightening our belts for the past 24 months as it is," he said.

The Jackson (Tenn.) dealer echoed Weil's statistics on numbers of older cars in operation. He said Oldsmobile had told its dealers the average age of cars running today is 5½ years.

"I don't think we'll get back to the sales volume we once had, and I don't think many dealers who have failed will be replaced. It's a different market, but people have to have transportation," said Miles, who would like to provide it to everyone in western Tennessee.

• Jay Kalo, of Kalo Motors, Inc., Grafton, W. Va., said negotiations and impending price cuts aren't the only things keeping a lid on sales. The high prices of cars, rebate-style marketing and extraordinary publicity for imports through local and national media are to blame for the worst December (1981) of his 33-year career, he said.

"I'm in the midst of a press battle," said Kalo, who holds Buick, Oldsmobile, Pontiac, Chevrolet and AMC/Jeep franchises. "In one hand I have a story from a Detroit daily that reports U. S. cars are safer than Japanese; in the other hand there's one about Japanese imports flooding the market.

"Stories like the latter give competitors (to the domestic industry) a lot of free publicity that hurts paying advertisers in the papers," he said.

Kalo said he doesn't understand why the media are biting the hands that feed them, and he has complained to the newspaper in Grafton in which he runs ads. He sees the domestic car makers as more faithful supporters of the economy.

"I would also say that GM factory-dealer relations have never been worse," he said. "The factory people are trying to help but nothing seems to work. And the company has increased the cost to me of every vehicle — money I'll never get back."

Located in depressed Taylor County, Kalo said he is losing sales to aggressive Ford dealers in the area and to dealers located near places outside the county where people commute to work.

"Basically we have two tools with which to work: Price and service. With our discount shrinking, there isn't much we can do with price, and people want to get service in a place convenient to their jobs," said Kalo.

Anyone who is coming into the showroom is in a wait-and-see mood, he said.

"Our sales people are telling customers if there is a rebate from GM, you'll get it, although it may take a while," said Cliff Shirley, dealer at Twin City Pontiac, Champaign, Ill.

Shirley said customers are asking about price cuts; he didn't see how they can be more than $200-$250.

"That doesn't compare very well with Iacocca's rebates," he said.

Shirley also maintains a Honda outlet, placed intentionally in a separate building. When Hondas shared the showroom with his Pontiac line, neither got full credit, he said.

"This past year has been difficult, even though there is only a 5-percent unemployment rate here," Shirley said. "I just received a silver anniversary plaque from Pontiac and I told them it should have been for 49 years: I've aged another 24 or 25 just in the last year."

Topless Riviera

The Buick Riviera convertible, which goes on sale April 15, made its public debut at last week's Detroit Auto Show. The American Sunroof conversion includes a power top with glass rear window and power rear side windows, and retains the rear seat. Price tag is expected to be below $25,000. The cars are built and prepared at the Linden (N. J.) assembly plant, then shipped for convertible conversion. Only 500 will be built during the '82 model year. Standard equipment includes four-wheel-disk brakes, locking wire wheels and suspension upgrading.

Tax break for buyers, gasoline excise, levy on Japanese cars

Iacocca's formula for a comeback

BOCA RATON, Fla. — Chrysler Corp. Chairman Lee Iacocca continued his campaign for a tax credit for buyers of fuel-efficient U. S. cars in an address to the Asset Management Seminar here.

He also called for a 25-cents-per-gallon excise tax on gasoline and a tax on Japanese cars "equal to the tax loss we suffer on every car they now sell here." He said that loss is $1,750 per car.

Iacocca wants the federal government to provide a $1,500 personal tax credit for the purchase of an American-built car or truck that gets 25 MPG or more.

He said this would increase sales by one million units a year, bring 250,000 people back to work, and save a billion gallons of gasoline a year "as people turn in their old gas guzzlers for new fuel-efficient automobiles."

He said his plan would cost the Treasury $4.5 billion in tax credits, but he maintained this would be almost totally offset by welfare payments that would be eliminated and by income taxes and Social Security taxes paid by the 250,000 workers who would be back on the job.

Iacocca pointed to two examples to show that tax credits work. He said a one-month, $700-per-car excise-tax forgiveness in Ontario increased sales 59 percent and a one-month, $300-per-car sales-tax break in Michigan boosted sales 25 percent.

Iacocca wants the 25-cents-per-gallon excise tax on gasoline "to reestablish and reinforce our national energy policy which is to sharply reduce our dependence on foreign oil."

He noted that stable or falling gasoline prices have spurred sales of big cars. This, naturally, doesn't please him since Chrysler is primarily a purveyor of small cars. The tax would make high-MPG cars more attractive.

The 25-cent tax, he said, would bring the federal treasury $25 billion a year—"that's $25 billion the feds don't have to go out and borrow on the open market, pay interest on and crowd out the job-creating businesses who need capital to stay competitive."

"It's one of those wonderful, unique opportunities to kill about three birds with one stone," Iacocca said. "Reduce the importation of Middle East oil, restore the trend toward new fuel-efficient cars and raise badly needed revenue for the federal treasury."

• Iacocca urged that the U. S. devise "a national strategy to offset the government-granted Japanese advantage over American automobile producers."

He figures that the U. S. loses $1,750 in federal, state and local taxes for every Japanese car sold in this country—"a good share of it the direct result of Japanese tax policy."

"Put it another way," he said. "If your neighbor buys a Japanese car, you and your other neighbors subsidize his purchase to the tune of $1,750 in federal, state, and local taxes."

As another example, he asserted that U. S. taxpayers pay an extra $4 billion in annual taxes "in order to provide the car buyers of America with the choice of buying two million Japanese cars a year at favorable prices."

"Our automotive imbalance of trade with Japan is over $13 billion a year," Iacocca said.

"That's the price of a government policy which says we don't care what it costs in unemployment, in welfare, in lost taxes, in trade deficits—we are going to be the only country in the world that says one-way free trade is the principle on which we stand."

As a solution, he suggested: "Let's slap a tax on every Japanese car sold in America — equal to the tax loss we suffer on every car they now sell here.

"Then we would have at least a fair shot at our own market. We're still kept out of Japan. But I don't see anything un-American about giving American workers an even break at competing for the American market."

Volvo plant due for Michigan, but not for autos

DETROIT. — Volvo is coming to Michigan, but the Swedish firm will build automated assembly line equipment in the state, not cars.

The Volvo plant will be in the Detroit suburb of Sterling Heights, which is also the site of the now-delayed Volkswagen assembly plant. The Volvo venture was announced by Gov. William G. Milliken in his State of the State address.

Volvo is leasing 15,000 square feet of office and plant space. A small staff is to begin selling Swedish-made equipment this year. The next step is to build the equipment here, and a larger plant is expected for the operation by 1984.

The computerized equipment is called wire-guided vehicles. The machines replace conveyor belts and carry auto chassis along a slot in the floor to work stations where operations are performed by workers or robots.

Power top for Corolla

American Custom Coachworks, Beverly Hills, Calif., has introduced an automatic convertible top for the 1982 Toyota Corolla. Production is said to be running at 100 a month. Conversion price is $4,950 to dealers.

GM spells Spain with a capital 'S'

By Richard Feast
European Editor

You approach Figueruelas over the flat, open fields from Zaragoza, Spain. In November, it is misty and cold. The gray, flat cubes that form the vast complex are hidden in the fog — the only beacons are the colorful "GM" and "Opel" signs.

Heavy trucks rumble around, raising the dust on the still unmade roads. There seems to be chaos everywhere.

One year ago, this was fertile Aragon farmland. A few months from now, it will be General Motors' newest, best and most costly car plant.

It does not seem possible.

Richard C. Nerod, managing director of GM Espana, commented, "Pulling all this together is like a D-day operation — though I wasn't around for that. You have to marshal an awful lot of efforts, and it says something for a company like GM that you are able to go out and get the right people."

He is confident that the first production S-car will roll on time, ready for launch at September's Paris auto show. "We don't talk about fall-back dates," he said. "There's just one date we're going for."

GM's vast investment in Spain — to the order of $1.5 billion — is being undertaken because GM identified a gap in its European auto lineup. It had no super-mini in the Ford Fiesta/Renault 5/VW Polo/Fiat 127 category which is particularly large in Italy, France and Spain.

Opel, GM's European passenger-car operation, was simply missing around 35 percent of the action in France, about 45 percent in Italy. Both are big markets — France 1.87 million in 1980, Italy 1.72 million.

• According to M. A. Razaq, GM's marketing director in Spain, the category accounts for 35 percent there as well. "Furthermore, we forecast it to increase by 1985 to the area of 45 percent," he said.

The only question was where to locate the extra plant, for at that time (the late '70s) Opel was working to capacity, with particularly strong demand in 1979 for the newly introduced front-drive Kadett.

The downturn in demand for big cars, of the type made at Opel's Russelsheim headquarters in Germany, changed that in the past couple of years, but GM was convinced of the need to raise its European capacity from just under one million to around 1.3 million.

In the end, it selected Spain for the car plant and two component factories, and Austria for a factory to provide the engines and gearboxes. It was undoubtedly attracted by government, aid, reputed to be $280 million in subsidy plus tax benefits and long-term credits in Spain.

But GM came in for a lot of flak from laid-off employes at Russelsheim, who saw it as a move away from West Germany to Spain.

Said Nerod, "I can understand some of that, and I guess that's true for people working in the States and seeing us put a project into Mexico.

"On the other hand, that may be a bit narrow in perspective, because it's not going to be a case of putting something in Spain but not putting something in, say, Germany.

"There's a lot of business that's going to be generated here for Germany and our other European component plants."

Hennig A. Klages, finance director of GM Espana, said that practically every European country was looked at for the expansion program.

"Harder looks were taken at Austria, where we finally decided to put the engine plant," he said. "France was looked at hard, England not quite so hard. Italy was practically discarded from the outset. Belgium, Holland and Germany were also considered."

He said GM has the status of a preferential interest company in Spain.

"It allows very substantial — 95 percent — reductions on duties on imported machinery and equipment," he said. "It allows you a certain reduction in local taxes, license fees and the like, and it has given a cash grant on our capital expenditures.

"Apart from that, the government is doing more or less what you can get in any other European country — it's providing the infrastructure, access roads, water, lighting and so on," Klages said.

The Figueruelas plant—more commonly known as Zaragoza—includes press, sub-assembly of body and chassis components, paint and final assembly of vehicles.

It is controlled by GM Espana, which is also responsible for the nearby Logrono component factory. This will fabricate consoles, instrument panels, front and rear bumpers by injection molding processes, as ing. The Delco section will produce shock absorbers, front suspension struts and strut cartridges.

• The Figueruelas facility is vast — 799 acres and a building are covering 3.98 million square feet. Interestingly, there is plenty of space for expansion to make it into a two-car plant at any time in the future.

It is designed to produce 270,000 units a year, or 1,200 daily or 75 an hour. Pre-series production will begin in July, followed by the start of proper production in August.

Altogether, GM's activities in Spain will create 12,580 jobs, 10,900 of them at Figueruelas.

Nerod said, "As you can see from the space we have here, and the layout, if there was some point in the future where we needed an overall expansion from 270,000 to, say, 400,000, there is space.

"The buildings are all laid out in such a way that there is provision for moving them out to give us more capacity."

Then he added, "But, we've still got to take step one . . ."

Ford, which entered Spain in 1976 with its Fiesta factory at Almusafes, has a similar facility to expand—and is doing so with the recent introduction of the Escort there.

How does GM's approach differ from Ford's?

Nerod said, "We're using much more automation. They have almost none in comparison. Ours is a lot more sophisticated. We're looking down the road to something that will help us keep better control on cost, as well as our quality — two very basic things."

In addition, GM has no Spanish engine plant; Ford does. Ford does not have the press shop that GM does.

"In terms of capacity," Nerod added, "we're maybe 10 jobs an hour more, but we're pretty close. But I think they've done a good job and I have a lot of respect for them."

Nerod admits it is a plum GM job. He talks enthusiastically about the project — to be achieved in 900 working days and with the knowledge that a vast bundle of money is at stake.

"When you think about it is when you get nervous," he said. "Jim McDonald (GM President) was over here recently and he was saying 'You guys ought to be nervous.' I said, 'We're too busy to be nervous.' "

Nerod added, "It's a helluva lot better than the alternative, cutting back, closing down.

"It's a lot more fun to be creating, building, expanding. You get that feeling that you are going forward, that the corporation is going forward."

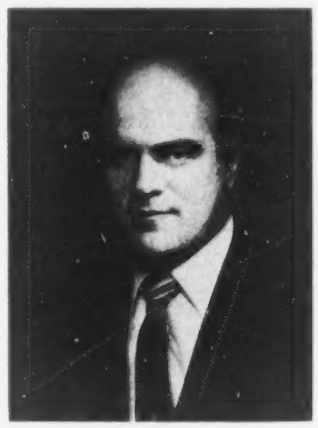
Nerod, 44, joined GM Overseas Operations in 1960. He held various posts in Venezuela, Uruguay, Chile, Australia, Thailand and Malaysia. He was managing director of GM Venezuela from February, 1977, until he was appointed to the Spanish post in September, 1980.

He heads an international team of managers from 16 countries, in particular from West Germany, Belgium, the U. S./Canada and from Argentina. The marketing director is from Pakistan, and there are people from Uruguay, Switzerland, Spain.

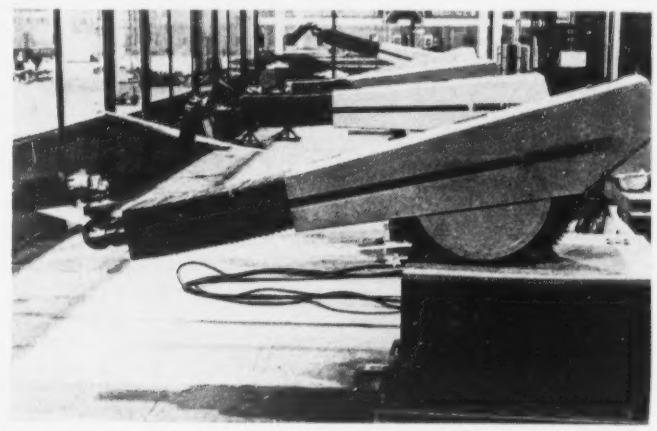
It meant bringing in families from around the globe, finding accommodations, starting schools, bringing in teachers.

GM is changing the order of things in the Zaragoza area, where it will become the Number One employer.

Nerod jokes, "This is a once in a career opportunity — I hope! Look at me. I'm only 21 years old really!"



Richard C. Nerod



A view of the General Motors plant in Zaragoza, Spain, last fall shows body-welding robots installed within the almost empty shell of the building. The plant will build GM's S-car and is scheduled to be in operation by next August.

'Pulling all this together is like a D-day operation," says the general manager of GM Espana, who is confident the S-car will be ready to roll in time for the Paris auto show in September.

Plastic cabs being tested by GMC trucks

By Roger Rowand
Engineering Editor

WASHINGTON. — General Motors has five experimental General model heavy-duty trucks building up high mileage in tests of their fiberglass sheet molded compound (SMC) cab components.

Usually, the General has an aluminum cab. The fiberglass SMC tests are part of an effort to learn if SMC is a viable alternative to aluminum, according to James D. Cote, chief engineer, truck component design at GMC Truck & Coach Division.

Another SMC General was displayed at a conference of the Society of the Plastics Industry here. That show model attracted considerable attention from chemists, engineers, financial figures and others through the week-long exhibit.

The glass cab is a joint project of Truck & Coach, GM Manufacturing Development and GM Research.

Among component suppliers were General Tire & Rubber Co., Rockwell International, Goodyear Tire & Rubber Co. and ICI Americas, Inc.

The cab's fiberglass technology evolved from GMC's fiberglass-reinforced tractor doors, "and certainly our confidence did," Cote said.

Results with the door have

General features plastic cab

This GMC General with a fiber-reinforced plastic (FRP) cab was displayed at the 37th annual conference of Reinforced Plastics/Composites Institute in Washington. Five trucks with this cab currently are undergoing evaluation in both on and off-road service typical of heavy-truck operations.

Ford's Cargo named Europe's top '82 truck

LONDON. — An international panel of heavy-truck experts from 12 European countries has named the Ford Cargo Europe's "Truck of the Year" for 1982. The Cargo was launched last March, and has since been introduced in Australia, South Africa, South America and the West Indies.

Six panel members made the Cargo their first choice. In all, the Cargo received 50 points — largest ever in the annual voting — 16 more than the second-place Scania entry and 19 more than a Mercedes-Benz truck.

IH offering new hybrid for severe service use

CHICAGO. — A new version of a hybrid International on/off-highway truck developed for severe service with energy and petroleum specialists has been introduced by International Harvester's Truck Group.

Designated Model COF-5870, the unit combines the rugged chassis of the International Paystar on/off highway line with the space-saving cab of the new CO-9670 XL-Series.

"This increases maneuverability by reducing the vehicle's overall length without sacrificing its platform length," said T. E. Reimers, product marketing vice president. "The design has proven a particular favorite in fracturing and other well-servicing operations, and its platform is primarily used to carry pumping equipment.

COF-5870s are offered in 6x4, 6x6 and 8x4 tandem front steering axle versions with the cab in all cases being a 76-inch BBC sleeper. The area normally occupied by the sleeper bunk can be used to store sensitive and valuable electronic gear necessary on the job site, Reimers said.

A 12¼-inch deep frame with a ⅜ths-inch thickness is standard for 6x4 units; and a 12-inch deep frame ¼-inch thick is standard for 6x6s and 8x4s.

"The COF-5870 riveted aluminum cab is light weight with more driver room than any other cabover available, and its large windshield and side windows provide maximum visibility," Reimers said.

Standard drivetrain components for the 6x4 are a Detroit 6V92TA engine, 13-speed transmission and 38,000-pound rear axle. The standard front axle

New IH cabover servicing oil well

One of the new International COF-5870 models designed for energy/petroleum operations is being used here in well-servicing.

Datsun modifiers now can remove box from pickup

CARSON, Calif. — Nissan U.S.A., distributor of Datsun trucks, has announced what it describes as the first truck-bed removal program in the compact-pickup market in the U.S.

The new program, a spokesman said, will allow greater flexibility for consumers and dealers in cases where a buyer wants to modify the rear body with a stake bed, tool boxes or other designs for business use.

Such buyers previously had to order the cab/chassis from dealers, and in some instances wait for some time for delivery if the unit was not in stock, the spokesman noted.

Under the new program, he explained, Datsun dealers, consumers or body builders can remove the standard bed from the new heavy-duty, gas-powered, long-bed pickup and replace it with a specialized bed, following guidelines provided in a booklet available from Nissan.

The spokesman said there are only minor differences between the special cab/chassis and the heavy-duty pickup. The chassis is available only in white, has no bed and has bucket seats. The new unit features a variety of colors, a standard bed and a bench seat.

truck industry news

But industry total is down 10.7 pct.

Scattered gains mark November registrations

November registrations of new trucks of all types in the U.S. fell 10.7 percent below those for the same month in 1980, but there were significant gains by Peterbilt and the non-captive imported light trucks, plus increases here and there by some domestic makes.

During the month, according to R. L. Polk & Co., 169,423 vehicles were registered, compared with 189,785 in 1980.

Table on Page 41

Peterbilt's total of 738 tallies in November was 69 percent higher than the previous year's 437 units, while the non-captive imports were up 32 percent, from 19,405 units in 1980 to 25,614.

White tallies during the month were up 13.8 percent, from 305 in 1980 to 347, and the Mack count increased from 1,580 to 1,792, a gain of 13.4 percent. Kenworth had a 12.9 percent boost, moving from 706 units to 797.

Registrations of Group 1 Dodge trucks were up 9.7 percent, from 7,820 units in 1980 to 8,582. GMC's Group 2 tallies were 2 percent higher for the month, rising from 5,768 units in 1980 to 5,878.

Eleven - month registrations topped the two-million mark in the final days of November, six weeks later than in 1980. At the end of the month, the total was 2,005,683 units, a decline of 12.3 percent from the previous year's 2,285,704.

The count was down in all three market segments and seven of the eight weight groups. Tallies were up substantially for Group 3 vehicles and the non-captive light imports were higher, too.

Light-truck registrations through November were off 11.7 percent, from 2,047,434 in 1980

Continued on Page 42, Col. 5

HD registrations for 11 months decline 17.6 pct.

Eleven-month registrations of new Groups 7 and 8 trucks in the U. S. were down 17.6 percent from 1980, according to R. L. Polk & Co. statistics, dropping from 178,405 to 147,005 units in 1981.

Registrations of vehicles in both groups during 1981 were down by the same percentage—17.6 percent. The Group 7 count in 1981 was 60,458 units, compared with the year-earlier 73,389. Group 8 dropped from 105,016 tallies in 1980 to 86,547.

During the month, 13,264 heavy trucks were registered, a decline of 11.4 percent from the previous year's 14,968 units.

International and Volvo were the only nameplates to show an

Gorsuch 'very pleased' with measure

Administration backs Clean Air Act rewrite

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—Abandoning a year-long policy of posturing on clean air policy, the Reagan Administration last week came out in support of a rewrite of the Clean Air Act, supported by a coalition of business and labor, including the U. S. auto industry.

EPA Administrator Anne Gorsuch told an industry-labor group meeting here that she was "very pleased" with a measure introduced just before Christmas by Rep. Thomas Luken, Ohio Democrat; Rep. John Dingell, Michigan Democrat, and others, that incorporates the provisions of an earlier measure sponsored by Rep. Bud Hillis, Indiana Republican, and Rep. Bob Traxler, Michigan Democrat.

It would roll back auto emission standards and substantially eliminate EPA's ability to force a recall of vehicles that do not meet current emission standards.

Gorsuch said Vice President George Bush will help her push for passage of the legislation.

• Environmental groups reiterated their previous objections to the measure, labeling it "a dirty-air Christmas present to the nation that cuts to the heart of the basic federal Clean Air program."

In the Senate Environment and Public Works Committee, Chairman Robert Stafford, Vermont Republican, has thus far shown little inclination to follow Reagan Administration guidelines in rewriting the Clean Air Act, pursuing instead a policy of "fine-tuning" the present Act. Thus far, the full committee has supported this approach.

On the House side, Health and Environmental Subcommittee Chairman Henry Waxman, California Democrat, has pursued a similar philosophy — much to the chagrin of full committee Chairman Dingell, who has been pressing Waxman to conclude lengthy hearings on the subject and get on with writing legislation.

Thus far, Dingell has resisted requests from others interested in fast action on the Clean Air Act rewrite to take the legislation from Waxman's committee for fear of the revolt that this might create in Democratic ranks.

Congressional consideration of Clean Air legislation will resume tomorrow (Jan. 26) when the Senate Environment and Public Works Committee takes up a proposal to ease the current carbon monoxide standard from 3.4 GPM to 7.0 GPM, a move auto makers say will save consumers from $40 to $50 per vehicle with no loss of air quality, but which environmentalists charge will keep 13 major metro areas from meeting ambient air quality standards for the pollutant until after 1990.

CO pollution stems almost exclusively from automobiles and trucks.

Go out there and get 'em, Bill Ford exhorts his team

By Jim Plegue
Staff Writer

DETROIT. — "There's one point above all that I want to make this evening: The U. S. auto industry will come back. It will regain leadership. It will regain competitiveness."

Knute Rockne move over.

Like a coach delivering a rousing half-time pep talk, William Clay Ford, vice chairman of the Ford Motor Co. (and owner of the Detroit Lions professional football team), told his team that there is a bright future, that there will be a resurgence in the domestic vehicle market.

Ford's "team" was area dealers and others attending the annual Detroit Auto Show Industry Dinner here Jan. 19 at Cobo Hall. Ford was the keynote speaker and he didn't disappoint. He told an attentive audience that business will improve but "we're going to have to work hard for it."

He congratulated dealers for surviving during the flat economy, saying: "You've demonstrated your business abilities in the toughest market situation in the history of our business."

Ford said performance is coming back. "We're putting fun back into cars . . . we're going to give the customer new cars that handle well, that have exciting stying, that slam them against the back of their seats, if that's what they want.

"I think it's high time we give consumers what they want, not what the government thinks they should have, or what our social critics have decided buyers should have."

VW point opens

SMITHFIELD, R. I. — Mutual Volkswagen is Rhode Island's newest Volkswagen dealership.

Chase Manhattan and Volvo sign financing deal

Continued from Page 2

handle also match closely with the Chase preferred customer.

James confirmed that the operation would be handled out of a central location, his division's offices in Lake Success, N. Y.

He said there probably will not be offices across the country to handle this operation, though his staff will be traveling to dealerships to keep the personal contact.

While the specific methods of operation have to be finalized, James said there will be a toll-free telephone number available to the dealers.

For retail finance, the dealer, will be able to call with the credit information and get approval. The payout will be made after the paperwork is received by the bank, but with this method the dealer will know of financing approval and will not have to wait.

Meyers is odd man out in top-level shakeup

Higher profile for French at AMC

Continued from Page 1

tional and special vehicle operations: Lawrence H. Hyde, vice president of those operations (especially Jeep sales and development overseas) continues to report to him.

That leaves Jose Dedeurwaerder—who left Renault only four months ago for the No. 3 AMC slot — as the No. 2 man: President, chief operating officer and effectively in charge of North American operations.

At the same meeting, the board set up a new executive committee: Tippett, Dedeurwaerder and, in the role of committee chairman, the former AMC board chairman himself, Roy D. Chapin Jr.

The management changes are being viewed in Detroit as an attempt by Renault to diplomatically increase its involvement in AMC without exercising its stock option.

Renault's hold on AMC has been increasing gradually. It has invested $350 million to date in the money-losing AMC operations. AMC officials have admitted in the past that Renault will be at the helm in development of all future products except four-wheel-drive vehicles. And Dedeurwaerder's arrival at the AMC engineering complex in September marked the second time a high-ranking Renault manager was recruited to run AMC operations.

• While AMC officials proclaimed the alliance was a marriage, there was little doubt that Renault was head of the household.

Renault U.S.A. General Manager Pierre Gazarian admitted that Renault is following its money into AMC — as auto analyst Arvid Jouppi had speculated in the daily press when the shakeup was first announced.

But Gazarian portrayed Dedeurwaerder's rapid ascent up the AMC ladder as the result of a desire for continuity by the AMC board rather than a further move by Renault into AMC management.

With Meyers stepping out of the picture, it was only natural that the No. 2 man, Tippett, would be named chairman, and the No. 3 man, Dedeurwaerder, would move up a notch, too, Gazarian said.

Jouppi and other industry analysts speculated cause and effect were reversed from Gazarian's scenario. With AMC continuing to lose money and both U. S. sales and market share down from a dismal 1980, Renault felt a need to protect its investments, according to this version.

"They could not have two very strong American influences (Tippett and Meyers) where French capital was keeping everything together," Jouppi told Automotive News.

The AMC management change —even with its implication of a stronger role for Renault, 100-percent owned by Mitterand's France—caused hardly a ripple on Wall Street.

Less than one week after the shakeup, AMC stock was again being traded at 2¾, and it closed the first few days only fractions of a point below the Jan. 14 level.

Gazarian didn't rule out additional infusions of French capital into AMC in the future. Indeed, at the Jan. 15 board meeting, AMC amended its agreements with major bank lenders and with Renault that reduced net-worth restrictions.

An AMC spokesman said the amendments had nothing at all to do with the changes in management.

Yet, indirectly, they do. Anything affecting AMC profits concerns Renault. Renault definitely has bottom-line financial expectations for AMC. It wants the AMC "to stand on its own feet" financially, Gazarian said. And it wants it to sell 100,000 to 150,000 Renault cars a year stateside "very quickly," although this obviously may take more time than anticipated, he said.

In all of 1981, Renault sold only 30,869 cars in the U. S. and that was nearly 22 percent better than in 1980. But when the Renault Alliance starts rolling off the AMC Kenosha (Wis.) line for 1983, the market will suddenly be hit with three times the usual number of Renaults.

• Therein lies one reason for Tippett's rise to the top. Respected through the industry as a master marketer, Tippett clearly has his job cut out for him.

Tippett's first job in the auto industry was with Ford Motor Co.

He came from an ad post at Procter and Gamble to Ford Autolite Division in 1964, and moved up the marketing ladder at Ford and Lincoln-Mercury divisions.

He became vice president of product and marketing for Philco-Ford in 1972, and in 1973 moved to England as director of sales and marketing for Ford of Europe.

He left Ford for STP Corp. in 1975 and was subsequently named president. Then came Singer Corp: Corporate vice president/president of the Sewing Products Group.

Tippett joined AMC as president in October, 1978, filling the vacancy left by Meyers' ascent to chairman when Roy Chapin Jr. retired. Tippett was 45 years old then; today the new AMC chairman is 49.

• Chapin, too, has a heavy streak of marketing in him, although it is likely that his heritage as a second-generation AMC man and his international reputation as a first-class industrialist will be of most use to AMC and Renault now.

Chapin, now 66, will not be taking a day-to-day role in the company. He has continued since his retirement to serve as a consultant to AMC.

Chapin's first job with the firm his father helped found — Hudson Motor Car Co.—was as a test driver, back in 1938. When Hudson and Nash-Kelvinator merged in 1954 to form American Motors, Roy Chapin Jr. was elected to the board.

Over the years, he was AMC treasurer, vice president and executive vice president. He took over as chairman in 1967.

Under his auspices, AMC launched that marketing ploy that has become an industry-wide standard: The Buyer Protection Plan, a comprehensive 12-month/12,000-mile warranty.

Chapin was hailed by Advertising Age as 1972 Adman of the Year for that one; stockholders hailed him for the 21-percent sales gain the plan helped generate.

• Dedeurwaerder recalled it was Chapin, as international vice president, who orchestrated the first encounter between Renault and AMC 20 years ago, when Renault began assembling AMC vehicles in Europe.

Chapin was also responsible for AMC's purchase of Kaiser Jeep in 1970. AMC acquired the company over the protests of Meyers, then vice president of manufacturing.

It was this difference of opinion that prompted talk in Detroit of a rift between Chapin and the man who succeeded him as chairman in 1978. But although Meyers wasn't Chapin's first choice for a successor, Chapin apparently never disapproved of the appointment, Jouppi said.

The latest management shakeup—which brings a bigger role to Chapin and a lesser one to Meyers — apparently was not orchestrated by Chapin.

Chapin's new role is to some degree an expansion of his consulting functions. And it certainly gives at least an appearance of continuity, and probably the real thing as well, to the new management team.

Roy Chapin Jr., incidentally, has passed the auto legacy onto a third generation of his family. His youngest son, Bill, 33, is manager of Renault product planning for AMC. He also did a short stint in three AMC zone offices.

• The mystery man to the U. S., of course, is Dedeurwaerder — pronounced roughly duhrdoo-wah-dair.

Sitting in his office seven months ago, Meyers told Automotive News that AMC was looking for a top-flight manufacturing man from Renault for the Kenosha launch of what is known in Europe as the R-9, but is to be called Alliance when it debuts here as a 1983 model.

The man that Meyers got was Dedeurwaerder. The 23-year Renault man had launched the R-9, and he is given credit in Renault circles for making the Douai (France) assembly plant the most modern, robotized plant in the world.

Now 49, Dedeurwaerder has been chief executive officer of Renault, Mexico (1973-76), industrial director of Renault Argentina (1967-73) and manufacturing director of Renault Belgium (1958-67). He was director of stamping and assembly at Douai until joining AMC in September, 1981, as executive vice president.

He is married, has one daughter, lives in a northern Detroit suburb and said he hasn't had time for golf or scuba diving since joining AMC.

Of Flemish extraction, Dedeurwaerder was a reserve officer—an electronics specialist—in the Belgium Navy until the traditional retirement age for reservists. He holds an engineering degree.

The product, not marketing, will be the area of concentration for successful auto makers of the 1980s, Dedeurwaerder told Automotive News. He also projected a corporate strategy in which engineers, accountants, sales staffs and other auto specialists will work more closely.

AMC and Renault will work more closely, too, he said.

• But he said he did not foresee more Renault people coming to AMC to fill top-level posts.

Dedeurwaerder and Jean-Marc Lepeu, AMC financial vice president, were both recruited from Renault, and AMC has sent one of its top men to Renault, as well.

That kind of permanent exchange is to be replaced by temporary personnel exchanges, Dedeurwaerder said. AMC management is to remain in Detroit, he said.

There are five Renault representatives, including a New York investment banker, on the 16-member AMC board. Dedeurwaerder, also on the board since September, isn't counted among those five.

Any sales/marketing executive to be appointed by AMC would have to be an American who knows the market, he said.

Dedeurwaerder's transfer to AMC was smoothed by the fact that he worked for two years with AMC people in France on the R-9 launch. He came monthly to AMC's Detroit engineering complex.

He said he has not signed a contract that specifies any length of time he is to serve in his new post. He is and feels very much as AMC employe, and will stay as long as the board wants him, he said.

The Kenosha plant is being tooled up to produce 800 to 1,000 Alliances a day, but there is no plan to drop the Concord and Spirit as long as demand holds up, he said.

He noted that the commonality of parts with the 4WD Eagles keeps the components for the two-wheel-drive vehicles in production and, ultimately, reduces the cost of the two-wheel-drive cars, thus lengthening their life spans.

• In the press release announcing the management change, AMC said Meyers "wished to pursue other interests and felt the time had come to turn over leadership of the company to the new team which he had put in place."

Meyers, now 53, entered the auto industry in 1950 at Ford. In 1957, he went to Chrysler, where he did stints in Ohio and Geneva. By 1960 he was director of manufacturing for all of Chrysler's overseas plants.

He joined AMC in 1962 as director of purchase analysis, and repeated his Chrysler-like rapid ascent. In 1967 he became vice president—automotive manufacturing; in 1972, group vice president—product; in 1977, president and chief operating officer; in 1978, chairman.

Last year the French government, which owns Renault, gave him its highest award — the Cross of the Chevalier of the French Legion of Honor — for strengthening Franco-American relationships through the AMC-Renault deal.

W. Paul Tippett

J. J. Dedeurwaerder

Roy D. Chapin Jr.

Scattered gains mark November truck market

Continued from Page 18

to 1,808,591. Mediums were down 15.7 percent to 50,087 units, compared with 59,865 the year earlier. Heavies were down 17.6 percent, from 178,405 units in 1980 to 147,005.

There were 290,303 non-captive import registrations in the January-November period, an increase of 5.4 percent over the year-earlier 275,412 and 22.3 percent higher than 237,339 units tallied in the like period in 1979.

The Group 1 non-captive count through November was up 4 percent, from 275,391 in 1980 to 286,446. There were 3,856 Group 2 tallies, 285.6 percent higher than the year-earlier 10. In Group 3, there was one tally, compared with 11 in 1980.

Total industry registrations of Group 1 trucks were down 3.9 percent to 1,006,293 units, compared with 1,047,226 in 1980. Group 2 was off 20.4 percent, from 993,835 in 1980 to 790,674. Group 3 was up 82.4 percent to 11,624 tallies, compared with 6,373 in 1980.

In Group 4, there were only 11 registrations through November, a decline of 94.5 percent from the previous year's 201 units. Group 5 was off 19.8 percent, from 2,131 in 1980 to 1,710, while the Group 6 total of 48,366 units was 15.9 percent lower than the year-earlier 57,533.

Registrations of both Groups 7 and 8 trucks were down 17.6 percent from the previous year's counts. Through November, there were 60,458 Group 7 tallies, versus 73,389 in 1980. The Group 8 count was down from 105,016 to 86,547.

HD registrations for 11 months decline 17.6 pct.

Continued from Page 18

improvement in units registrations through November over the previous year.

International's 11-month total was 37,609 units, an increase of 3.5 percent over the year-earlier 36,321. The company's sales and registrations in 1980 were seriously affected by a six-month shutdown due to a UAW strike.

Volvo's 1981 count through November was 73 percent higher than the previous year, 1,499 units versus 866.

International increased its share of the 11-month industry total by 5.22 percentage points. In 1980, its 36,321 registrations accounted for 20.36 percent of the total, compared with 25.58 percent in 1981 on 37,609 tallies.

No. 2 Ford, which was the leader in 1980, suffered a loss of 3.20 percentage points in market share over the 11-month period. Its 30,869 tallies through November accounted for 21 percent of the total, compared with the year-earlier 24.20 percent on 43,166 registrations.

Other gainers in penetration through November were Mack, Kenworth, Freightliner, Peterbelt, Volvo, Diamond Reo and the miscellaneous group. Other losers were GMC, Chevrolet, White, Autocar and Western Star.

Subaru salesmen take to the track

SONOMA, Calif. — Subaru salesmen literally got a feel for their '82 lineup at two ride-and-drive sessions at the Sears Point race track here.

Hosted by Subaru of Northern California, about 170 salesmen attended from all 50 of the distributor's dealerships in northern California, Nevada and Utah.

Under the guidance of Bob Bondurant and nine professional drivers from the Bob Bondurant School of high performance driving, the salesmen drove the '82s through curves and straightaways, in a slalom course and around the track.

To demonstrate Subaru's four-wheel-drive capabilities, a special off-road drive was set up. Heavy rains during the two days added to the test.

After each salesman was driven around the track by a Bondurant instructor, he tested the car's driveability for himself.

Before the test driving began each morning, salesmen met with Subaru of Northern California General Manager Barry Moore, who reviewed their sales records for '81 and laid out 1982 objectives.

Erwin Sedlmayer, product planner at the Subaru Technical Center, outlined the 35 product improvements for 1982.

The pre-introduction-day ride-and-drives got the dealer staffs back in time for the 1982 launch. The new models were brought in with television spots and a promotion that tied into Subaru's sponsorship of the U. S. Olympic ski team.

A 30-second television spot, dubbed "Skibaru in a Subaru" stressed the fun of driving the cars. The 4WD option that makes driving through snow easier was also stressed.

Custom-made ski hats and sun glasses — again promoting Subaru and the U. S. ski team — were given to anyone who came in to test drive an '82.

Citation is second, Escort third

Chevette is top-selling '81 nameplate

By Jenny L. King
Staff Writer

The nameplate sales race is an interesting reflection of the vagaries of consumers' tastes each year.

Using the domestic industry's 5.65-percent sales decline as a point of reference, following are some examples of the fortunes of the best-selling U. S.-built cars in 1981.

Chevrolet Chevette moved into first place, having lost out to Chevrolet Citation in 1980 by less than 1,000 units. Even so, Chevette sales of 346,307 were down 7.40 percent from 373,988 a year earlier. Citation, No. 2 in 1981, was down 19.89 percent, to 300,184 from 374,706.

Ford's Escort replaced the company's Fairmont as the No. 3 seller for the year. Escort, of course, was on the market only three months in 1980, so its sales increased four-fold in '81, to 284,907 from 60,196. Fairmont sales collapsed, down 35.88 percent to 182,909 from 285,272, putting it in 11th place.

Oldsmobile Cutlass Supreme climbed into fourth place from sixth. Its sales were up 2.81 percent, to 266,070 from 258,789. Chevrolet Malibu, though its sales plunged 21.14 percent, slipped only one place, to fifth from fourth, while standard Chevrolet sales dropped 19.63 percent and it lost ground, moving to sixth from fifth place.

Buick's Regal coupe improved its lot, moving into seventh from ninth place, with a sales increase of 4.58 percent. Buick Skylark sales soared 14.07 percent, and the nameplate captured eighth place, up from 11th.

Combined Reliant/Volare sales totaled 196,997, giving the Plymouth K-car and its forerunner ninth place, followed by Oldsmobile Cutlass sedan in 10th. Cutlass sales dropped 10.83 percent in 1981, to 187,952 from 210,784.

There are 79 nameplates on the current list, including twelve new in 1981: Pontiac T1000, Ford EXP, Mercury LN7, Cadillac Cimarron, Lincoln Continental, Oldsmobile Cutlass Ciera, Buick Century (front drive), Chrysler New Yorker, Dodge 400, Chrysler LeBaron (front drive), Chevrolet Celebrity and Pontiac 6000. The new nameplates went on sale as 1982 models at various times during 1981.

GM and UAW can't agree on major contract issues

Auto talks recessed; Ford may set pattern

Continued from Page 1

J. Pestillo, vice president, labor relations, said he is not sure if GM negotiations have reached an impasse or are at a pause, but he indicated that whatever happens with GM should have very little bearing on Ford's bargaining progress or decisions.

"We expect to do things, if we reach an agreeemnt, that would be very, very attractive to the people of Ford Motor Co.," Pestillo said. "I don't intend to stage any holdup."

• In the past Pestillo has mentioned phased-in benefits based on seniority changes in the lines of demarcation and reducing time off with pay as ways to cut labor costs.

While negotiations never reached any great momentum at Ford, bargaining at GM steamed along. When it broke down, both Fraser and Alfred S. Warren, GM labor relations vice president, said they were "disappointed" an agreement could not be reached.

"We regret very much to learn of the UAW's decision to recess our discussion," Warren said. "It had been our hope to continue and to come to some kind of a successful termination. We regret it very much, not only for the UAW, but also for our employes and our customers, dealers and the nation as a whole."

He said the industry cannot wait until July to cut its labor costs and needs something now.

While negotiations were recessed at GM, Fraser was quick to point out that there was movement, just not enough in the economics, outsourcing, job security and contract length areas.

"I don't mean to leave the impression there wasn't progress in all of these areas," he said. "It's just insufficient progress to result in an agreement."

According to sources, the union wanted a 15-month contract which, if negotiated, would have expired in April, 1983, in the midst of the usually profitable spring selling season. Both Ford and GM are expected to bring out competitive models then.

The union also asked for a moratorium on outsourcing and demanded all operations moved overseas within the past year be returned to the U. S. Also, sources say, the union wants company-wide seniority rather than a plant-by-plant plan.

The UAW plan also dropped labor costs by about $3.50 per hour.

• While Fraser said the union allowed enough time to reach an agreement, he said not having a pressure point, namely a strike deadline, might have caused problems. The union had made Jan. 23 the deadline for new agreements allowing two weeks between the GM and Ford Council meetings in Chicago Jan. 8 and the meetings in Washington last Saturday.

Another problem, according to sources, was a statement by GM Chairman Roger B. Smith in the Detroit Free Press last week. In that story, he said if the union did not grant concessions, plants would be closed and more layoffs would result. GM currently has about 125,000 hourly workers on indefinite layoff.

Smith's statement angered rank-and-file and the negotiating committee, who looked at it as a threat, sources say.

Warren said GM has held back on some of its anticipated plant closings because of the early talks. He said he would not directly link any future closings to the lack of an agreement but said some plants will definitely be closed because of market conditions.

GM has not closed any plants in the three years since the sales slump began. But 19 of its 35 car lines now have inventories over 100-days. The J-cars are exceptionally heavy with 279 days for the J2000, 276-days for the Cavalier and 155 days for the Cimarron.

GM also has a problem with future sales. It had promised to pass on all labor cost savings resulting from the negotiations directly to the consumers by cutting car prices. The market has been slow while customers wait to see how much the prices would drop. Now, if negotiations do not continue, GM must counteract that publicity and still hope to generate sales through other promotions.

Both Fraser and Warren admitted that not resuming negotiations would hurt sales and cost jobs.

• At the start of negotiations both sides agreed to withdraw their proposals if a settlement could not be reached, but Warren said he doesn't see GM discarding that framework although it might be altered if too much time passes.

The framework also would have allowed an independent CPA to see GM's books, provided for job security and equality of sacrifice.

Ford, however, withheld its agreement to the principles, demanding more time to analyze the proposal.

Some analysts have said the pricing strategy was a marketing game which GM would have won. According to one analyst, GM would have benefitted greatly from the price cut while Ford's market share would have been destroyed.

The analyst said GM's small-car market is sliding but the company has the ability to cut prices. Ford, however, has priced its cars below its competitors, according to Philip Caldwell, Ford chairman, and cannot afford to cut its prices equally with GM, which could hurt Ford sales.

GM kept Ford in dark about price-cut plan

DETROIT. — Two days before General Motors announced its pricing agreement with the UAW, top officials of GM and Ford Motor Co. met to map joint bargaining strategy, according to the Detroit Free Press.

Although GM officials had been meeting with the UAW since Nov. 14 on the pricing issue, they did not reveal the strategy to Ford, the story said. The meeting involved GM Chairman Roger B. Smith and Ford Chairman Philip Caldwell along with top negotiators for both sides.

After UAW President Douglas A. Fraser announced that GM would cut car prices penny for penny on any labor-cost savings generated by the new contract, Caldwell telephoned Smith and "reamed his ass," the Free Press said.

Although antitrust laws prohibit companies from discussing pricing policies, the story said UAW officials were dismayed with GM's cavalier handling of the situation.

Labor snag cancels GM price-cut ad blitz

DETROIT. — General Motors called off a multi-media advertising blitz which had been tentatively set for today (Jan. 25), following a breakdown in labor negotiations.

The ads had been planned to announce price reductions.

A new industrial revolution seen by Northwood official

DETROIT. — U. S. companies are creating another industrial revolution, the chancellor of Northwood Institute told an Adcraft Club of Detroit meeting.

Dr. David E. Fry cited several reasons for optimism about the future of U. S. industry.

Productivity has become a "consuming desire" for dozens of firms which are running serious programs to improve it, he said. He cited quality circle groups, increased use of robotics and computers in design and production as examples of how productivity is being stepped up.

"Hundreds of companies are introducing programs aimed at tapping experiences, resources and the advice of their employes . . . quality circle programs have grown one-hundred-fold in 10 years," Fry said.

"Incentive plans are exploding. Profit sharing is gaining adherence in many new places . . . a General Accounting Office study last year showed an average 17 percent work force cost savings for firms using one of these programs," he added.

Robots and computer-aided design and computer-aided manufacturing are in the midst of a revolution, he said.

"General Motors introduced robot welders in 1970 and expects to be using thousands by 1990 and that is only the tip of the iceberg," Fry said.

New corporate structures are evolving to meet new times, and strategic planning is taking a much higher profile, he said.

"Increasingly, if a company wants to get into a market it will often 'buy in' directly rather than starting its own operation," he said. "In the obverse, companies are selling off losing lines much more easily than they used to . . . Several major companies decided it is better to be a smaller survivor than a larger failure."

Finally, he added, research and development for the future is back.

He cited United Technologies as spending an additional $4 million in the next five years on R&D and Allied Corp. as doubling its 1982 R&D over 1979.

"These changes are real. They are signs of vitality, and they are not the thrashing of a dying dinosaur," he concluded.

Chrysler seeks expansion of pension deferral

DETROIT. — Chrysler Corp. has asked the UAW to extend its deferral agreement for about $187 million in pension fund payments, due last year. The union is considering the proposal.

According to a Chrysler spokesman, the company is asking for the extension because of its dwindling cash position. Deferral of the payments would have Chrysler about $93 million in each of the first two quarters of the year.

Barnes Chevrolet point purchased by Allen

BOISE, Idaho.—Bob Allen, a Chevrolet dealer in Royal Oak, Mich., has purchased Larry Barnes Chevrolet, a 28-year-old Boise dealership. Allen said his outlet in Michigan is in the path of an expressway now under construction.

Larry Barnes will retain his two Subaru dealerships as well as his Subaru distributorship serving all of Canada.

North American Auto Plants Closed 1979-1981

*Employment figures include both hourly and salaried workers.

† Chrysler also sold the Michigan City (Ind.) Molded Plastics Products operation as a going concern in August, 1981 and consolidated the Scio (Mich.) Introl operation with Huntsville (Ala.) Electronics in October, 1981. The other Introl facility in Ann Arbor, Mich., was sold to GT Products in January, 1982. Many laid-off workers were offered jobs at other Chrysler plants.

**Workers at the Fairfax facility were transferred to either the Batavia or Sharonville (O.) transmission plants.

Shirley marks 25

C. G. Shirley, right, owner-operator, Twin City Pontiac, Champaign, Ill., is presented with an exclusively designed silver-on-walnut plaque for more than 25 years of service, by H. T. Ridsdale, St. Louis zone manager.

Peugeot elevates ski sponsorship to national level

LYNDHURST, N. J.—Peugeot Motors of America's involvement in professional skiing has been expanded to include a national final as the company is sponsoring the only professional downhill ski race in the U. S. this year.

Anthony Aldarelli, general sales manager for the company, said recently that the national effort, under the banner of the Peugeot Grand Prix, was not in the company's game plan for this year, but with the canceling of another tour, this became the "only game in town," and Peugeot decided to increase its activity to include the national final.

There will be 35 races throughout the country on this circuit, he said, adding that Peugeot's "main goal this year is to make these races the most professional anyone has run."

The company began its involvement with professional skiing several years ago and limited its activity at first to the Northeast, then gradually expanded to other areas of the country.

This slow growth was anticipated to continue this year, he said, but the opportunity to create a national effort was presented and the company decided to take advantage of it.

Import stockpile rises again to 60½ day supply

Continued from Page 1

des-Benz (46½ days), BMW (51½ days) and Porsche (58 days). Volkswagen of America had a 78-day supply of Audis and a 138-day stock of imported VWs. (It also had an 83-day supply of U. S.-built Rabbits in stock.)

Other new-car inventories included Saab, 88 days; Volvo, 89 days; DeLorean, 92 days; Peugeot, 102 days; Jaguar Rover Triumph, 109 days; Alfa Romeo, 110 days; Renault, 175 days; Fiat, 234 days, and Lancia, 250 days.

Days-supply figures for imported pickup trucks in stock Jan. 1 were: Toyota, 60; Datsun, 89; Ford Courier, 111; Isuzu, 200; Chevrolet LUV, 215, Chrysler Corp./Mitsubishi, 237, and Mazda, 252.

With 10 GM plants on the sidelines

Week's car output rises to 92,815

By Patricia Hoffman
Staff Writer

Operations at all Ford Motor, Chrysler Corp., Volkswagen of America and Checker Motors facilities last week helped boost domestic auto production 56.03 percent over the previous week's output.

Last week, the makers scheduled 92,815 units, up from 59,465 the previous week, but down 21.27 percent from 117,886 the comparable 1981 week.

For the first three weeks of production this year, the makers have finished 203,208 units, a drop of 41.19 percent from 345,531 in last year's comparable period.

Eleven assembly points were idle last week for changeover/inventory adjustments. Ten of them were General Motors plants.

GM's Arlington, Baltimore, Framingham, Fremont, Lakewood, Lordstown, Willow Run and Wilmington facilities and American Motors' Kenosha point were all down for inventory control.

GM's Janesville plant was idled last week for changeover to the new J-cars. The plant previously built full-sized Chevrolets.

Also at GM, the Oklahoma City plant was idled Jan. 15 for conversion to a new line of automobiles after a decline in sales of the currently built X-body cars.

According to GM, the facility will continue production of the Chevrolet Citation when operations return sometime in mid-1982. Assembly of the Phoenix will be halted at the plant, leaving Tarrytown the sole producer of that car. GM has not said what other line Oklahoma City will assemble when production resumes.

GM has slated downtime at eight assembly points this week (Jan. 25). They are: Arlington, Baltimore, Framingham, Janesville, Lordstown, Oklahoma City, Willow Run and Wilmington.

On Feb. 1, GM will drop one shift at Fremont. Production will be at 45 units an hour on one shift from the current 45 units an hour on two shifts. This will put 1,900 workers on indefinite layoff.

California to explain rules on sale of 'federal' vehicles

SACRAMENTO. — New provisions that could allow the sale in California of cars certified only to federal emission standards will be explained by the California Air Resources board in El Monte March 4.

The changes stem from legislation passed by the State Legislature last year that:

1. Prevent the ARB from adopting primary emission standards prior to the 1986 model year which are most stringent than those in effect on May 20, 1981.

2. Require the ARB, by the beginning of the 1983 model year, to adopt regulations which allow federal vehicles to be sold in California provided that no comparable model is available in California and that federal vehicle emissions which exceed the California standards are offset by a manufacturer's California certified vehicles which are below the California standards.

3. Require the ARB to adopt regulations which reduce the amount of assembly-line testing of large engine families.

The ARB staff believes only a very few models are not available in California that might qualify for the offset program, such as manual-transmission versions of high-performance cars like the Camaro.

ARB said it will permit the sale of the federal vehicles but only if the maker has California-certified vehicles that are enough below the California standards to offset the excess emissions from the federal vehicle.

ARB said that means that, in addition to the grams-per-mile number differences, the vehicles must also be able to offset inherent emission differences between California and federal vehicles stemming from California's more-stringent requirements pertaining to emission-control warranties, allowable maintenance regulations, high-altitude requirements and other protocol variations.

ARB said offsets will be allowed only between like classes of vehicles and like classes of pollutants. It said offsets must also be used in the model year in which they are accrued and carryover will not be allowed.

More plants back; truck production climbs to 37,800

U. S. truck production last week jumped 34.80 percent from the previous week's output due to operations at all General Motors facilities and the return of three Ford Motor points and Volkswagen of America's Westmoreland plant.

The truck makers targeted output last week at 37,800 units, up from 28,041 the previous week, but down slightly from 38,010 in the comparable 1981 week.

So far this year, the manufacturers have assembled 86,127 trucks, down 19.70 percent from 107,251 in last year's comparable period.

Production resumed last week (Jan. 18) at Ford's Kansas City, Norfolk and Twin Cities facilities.

Also back last week was VWoA's Westmoreland point. All the above four facilities have been idle since before the holidays.

American Motors' Toledo point was idle last week for inventory control.

All other truck facilities operated last week.

3 plants return; car production rises in Canada

The return of three assembly points last week helped boost Canadian auto production substantially from the previous week, but the year-to-date total remained below the comparable 1981 period.

Last week's estimated output of 19,524 cars, rose considerably from 8,594 in the previous week, and was up 34.45 percent from 14,521 in the comparable week last year.

Year-to-date, the makers have finished 31,993 units, down 25.43 percent from 42,905 in the comparable 1981 period.

The truck manufacturers targeted output last week at 10,733 units, a gain of 34.03 percent from 8,038 the previous week, but down 9.70 percent from 11,930 the same week last year.

So far this year, the truck makers have assembled 21,223 units, down 35.76 percent from 33,036 in the comparable 1981 period.

Operations resumed last Monday (Jan. 18) at Ford Motor's Oakville facility, General Motors' St. Therese point, and American Motors' Brampton plant.

Also back last week was Ford's Oakville truck point.

All four plants had been idle since Dec. 23.

Ford's St. Thomas car point remained down last week for the third consecutive week. The plant is slated to return today (Jan. 25).

GM's Oshawa (No. 1) car facility will be idle starting today for inventory control. The point is slated to return Feb. 8.

Also GM's Scarborough (van) facility will be idle one week, starting today.

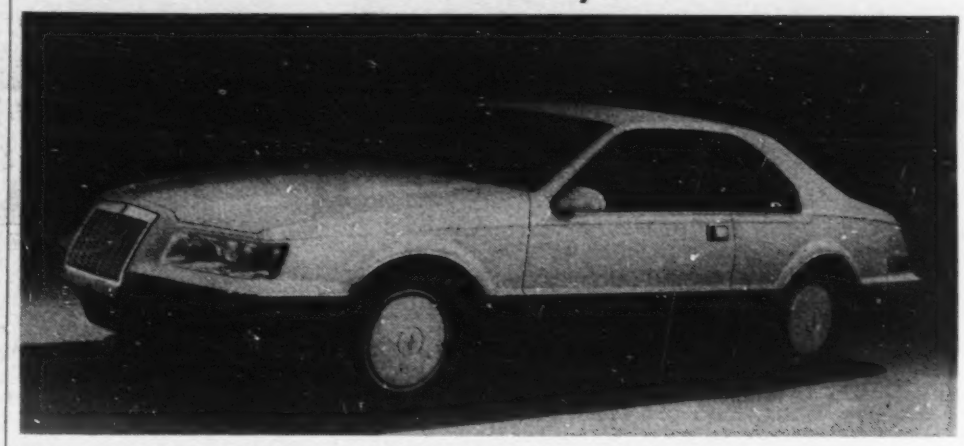
Future luxury?



Ford's Continental Concept 90 bows at New York show

A low-slung, rounded five-seater, the Continental Concept 90, was introduced by Ford Motor Co. at the New York Auto Show over the weekend. Based on development models, the CC 90, with its subtle wedge shape, has a better aerodynamic efficiency than any luxury car now made in the U. S., Ford engineers say. The car will be exhibited at auto shows to test its acceptance as a logical forerunner of future luxury models of the mid-'80s and beyond. Story on Page 6.

But it's not a trend for major metro areas, corporation says

GM duals bloom in Chicago, Atlanta

By Joseph Buhn
Marketing Editor

Two General Motors dealers recently set up intracorporate duals in major metro areas, but GM doesn't expect it to be any big trend.

In Chicago, Eugene D. Fanning now has Fanning Cadillac-Fanning Buick, housed in individual facilities of a five-building complex, but with the main showroom equally divided between the two makes.

In Atlanta, Roosevelt Robinson has Robinson Cadillac-Pontiac.

J. Charles Green, executive director of sales, GM Sales and Marketing Staff, said that despite the novelty of such duals in major metro areas, GM hasn't changed its policy toward dualing.

He conceded, though, that with "quite a number" of GM dealers having gone out of business across the country, there are "more opportunities to do more of it (grant duals)."

But Green stressed that GM weighs each potential dual situation carefully, not only in terms of market potential, but also a dealer's ability to provide adequate service, capital, facility space, etc.

Essentially, the divisions involved have to agree to the dual, Green said, with corporate staff reserving final approval.

Green said there hadn't been many requests for car duals in major metro areas.

And he thought the closing of GM points had bottomed out.

"In my opinion, we've reached the crossroads where the number of dealerships closing has just about knocked itself out," he said. "I really think we hit bottom. We have only one place to go, and that's back up."

Fanning acquired Warren Buick, Chicago, to put his dual together. Negotiations for the purchase of the second GM outlet went on for over a year.

To keep the Cadillac and Buick operations separate and distinct, he established separate advertising and marketing and separate sales staffs, but all under one corporate umbrella.

"We plan to give exclusivity to each line. We will not dilute either franchise at the expense of the other," Fanning said.

Fanning's division of operations extends to the service department as well. Service departments for both makes — totally refurbished and retooled— are now housed on separate floors of his facility.

Fanning, chairman of the national Cadillac Dealer Council, has been a GM dealer for 27 years.

In Detroit, Bob Barnett, who owns several dealerships, thought a lot of GM dealers would be interested in dualing with another GM make, and he said he certainly wouldn't mind.

"I would like very much and need very much to dual, and I'd be very interested in dualing," Barnett said.

He owns Bob Barnett Pontiac in Dearborn and, with his son Steve, Steve Barnett, Inc. (Pontiac-Cadillac-Jeep - Renault-DeLorean) in Fort Pierce, Fla., as well as Steve Barnett Imports, Vero Beach, Fla., and Arbor Dodge, Ann Arbor, Mich.

"It's important for the manufacturer to be looking at duals for the salvation of the dealers," Barnett said.

British delay decision on more DeLorean aid

By Edward Lapham
Financial Editor

British officials last week left the DeLorean sports car enterprise, its dealers and workers hanging in the lurch by deferring a decision of whether to provide additional financing until after a 14-day study by accounting firm Coopers & Lybrand.

John DeLorean, DeLorean Motor Co. chairman, had been seeking $60 to $70 million in export financing guarantees from the quasi-governmental Export Credit Guarantees Department.

A spokesman in the company's New York office said that at one point last week John DeLorean had asked British officials for "a restructuring" of the arrangements under which the British Government, through Northern Ireland agencies, already has provided the project with grants, loans and equity investment totaling about $160 million.

The spokesman said DeLorean was "not necessarily" asking for the guarantees but for some other type of arrangement.

DeLorean, who rushed into meetings to discuss the ramifi-

Ford-UAW talks on front burner; pressure grows

By Marjorie Sorge
Labor Editor

After almost three weeks on the back burner while General Motors and the UAW tried to agree on a new contract, Ford Motor Co. and the union will begin full-scale bargaining today (Feb. 1).

Ford talks had originally been scheduled to resume last Friday. Company spokesmen said that the delay was a result of the UAW-General Motors bargaining council meeting and the UAW board meeting being moved to Chicago for the weekend.

When talks began between the UAW and the auto companies three weeks ago, Ford immediately began playing second fiddle to GM where the pattern agreement was being set.

But indications now are that Ford and the UAW may develop a contract different from any negotiated at GM. UAW President Douglas A. Fraser has said different solutions to labor cost problems may be necessary at Ford. He has also indicated the length of an agreement with Ford could be different from the contract at GM which the union wants to expire in September, 1983.

Talks broke off between the union and GM Jan. 20 without a settlement, and Ford negotiators voted to follow suit pending the decision of the UAW Ford and GM Councils Jan. 23. Those councils met in Washington, and both voted to continue bargaining.

However, the proposal met with stiff opposition in the GM Council and a roll-call vote was taken. By a margin of 58 to 42 percent the council voted to resume talks.

When questioned about the closeness of the GM Council vote, Fraser said, "I would hope it would send a message to General Motors that the workers are very cautious about this approach . . . that they have some apprehension. What has come through loud and clear is their basic concern about job security and outsourcing."

Fraser set midnight Thursday (Jan. 28) as the deadline for a new contract with GM which would include labor cost concessions the auto maker says it needs before the current contract expires Sept. 14, 1982.

"This is the final, final chance," he said. "If you don't do it this time, forget about it until July."

At presstime GM and the UAW had not reached an agreement but both sides were optimistic.

• So far only two proposals have been put on the table at Ford and no full-scale negotiations have begun, according to Donald Ephlin, UAW vice president and director of the union's Ford department.

UAW officials say if an agreement is reached at GM, Ford negotiators will spend a good deal of time studying the plan, trying to tailor it to Ford needs. That contract could be different from any reached at GM.

"If they (Ford) have different problems than GM workers, we aren't going to march in lockstep," Fraser said. "If they have different problems that deserve different solutions, then we should look for those different solutions."

Fraser said there may not be any difference in the economics of an agreement at Ford but in-

breaking news

UAW-GM talks fall through

DETROIT. — The UAW and General Motors failed to reach agreement last week on a contract which could have reduced labor costs and passed on those cuts to the customer through lowered car prices. UAW President Douglas A. Fraser said he expects consumers now will be angry at both the UAW and GM and GM car sales will continue to be slow. Failure to reach an agreement will also cause major layoffs at GM and some plant closings. Contract talks will resume in July.

Separately, Ford Motor Co., also seeking concessions, said its under-10-year-seniority SUB fund runs out this week.

General Dynamics top prospect for Chrysler unit

DETROIT.—A list of possible buyers of Chrysler Corp.'s defense subsidiary apparently has been narrowed to General Dynamics Corp. Several firms had expressed interest in acquiring the money-making tank building operation.

Quality Assurance Centers to be closed

Brown cites potential in DeLorean changes

By Edward Lapham
Financial Editor

DeLorean Motor Co. officials are continuing to make product, marketing and sales changes despite the company's unsuccessful bid last week to arrange additional export financing through British sources.

"Given time, there are a lot of things we can do to improve market potential," said C. R. Brown, president of DeLorean Motor Cars of America, the company's U. S. marketing and sales division.

Brown said the quality of the gullwing sports cars being shipped from the Dunmurry (Northern Ireland) plant has improved to the point that he is phasing out the company's three Quality Assurance Centers which will eventually save the company between $1 million and $2 million monthly.

The Michigan center is virtually closed now, he said, and the New Jersey and California sites could be scaled back by as soon as the end of March.

Brown said the company is retaining the top people from the QAC operations and integrating them into operations elsewhere. The company will retain some prep operations, however, to clean the cars and repair any marine damage sustained enroute from Belfast harbor.

The QAC phase-out reflects continuing improvement in product quality. Originally, the "prep" operations were costing the company about $2,000 per car, sources said, although that figure recently has been reduced to about $1,000 per car.

• Brown and his lieutenants are now turning their attention to other matters, including an approved plan to paint some of the cars.

He said there are currently two "proven, tested" systems for applying paint to stainless steel, one by duPont and one by Ditzler. Dealers can paint the cars, if desired, in their own paint bays. Two early colors are a "Ferrari-like" red and a "startling" black, he said.

Brown confirmed that there has been a problem with fingerprint smudges, after five or 10 car washes, when the sealer applied by the company washes off. Brown said duPont has developed a clear coat, which will be applied like paint and sit on the metal.

"It is completely impervious to fingerprints," he said, and "enhances the appearance of the stainless steel."

The sales and marketing division also is set to launch a number of sales meetings to "correct infractions" by dealership sales personnel. The infractions, involving improper approaches to "selling a $25,000 car," were discovered by a secret shopper posing as a prospect Brown sent to visit dealerships.

• Brown, who said he still goes to the Dunmurry plant "every month or two" to confer with the production people, said a number of dealers sent telegrams directly to DMC Chairman John Z. DeLorean during the negotiations with British officials to express their view of the situation.

"They were all optimistic and enthusiastic," he said. "And these were dealers from the de-

Sportster RS with heritage

Lafer Auto Sales, North Hollywood, Calif., will introduce at the NADA show the Sportster RS. It is made in Vancouver, B. C., by Intermeccanica International, owned by Frank Reisner, who founded Carrozzeria Intermeccanica in Italy in 1959. This Porsche replica, designed for performance, is based on modified VW Beetle mechanicals. It features roll-up side windows, GT driving seats and torsion bar suspension and may be ordered with a hardtop individually fitted to the car. Base price is $17,900, and annual production is estimated to run near 150.

French influence grows at AMC

Tippett talks about new products

By Al Fleming
Industry Editor

SOUTHFIELD, Mich. — Tough economic times are not changing or delaying American Motors' new-product plans.

W. Paul Tippett spelled that out to Automotive News in no uncertain terms exactly one week after being elected chairman of the board and chief executive officer of the company on Jan. 15.

Those plans include:

The start this month of export shipments of Jeep CJ-models from Toledo to French parent Renault, for marketing in France and Belgium.

Introduction in March of the Renault Fuego, a sporty two-seat car, in the U. S.

Introduction next September of the U. S.-produced version of the Renault R-9 front-wheel-drive small car.

Availability of diesel engines for Jeeps and the imported Renault 18i during 1982.

Debut of a new generation of downsized, fuel-efficient Jeeps in the spring of 1983, along with a brand new AMC-designed-and-built four-cylinder engine.

And phase-out of AMC's rear-wheel-drive cars by the start of the 1985 model year, at which time the company will be marketing a variety of front- and four-wheel-drive vehicles and powertrains.

• "The history of this company has been that we've never had a steady flow of new products," said Tippett, who succeeded Gerald Meyers as chairman in a sudden top-level shift in mid-January.

"We'd come out with a hot new product, then have to sit in the weeds for a while. We want to avoid that; we've got an effective line of products coming, and they're starting to roll now."

The 49-year-old auto executive added: "We expect to spend about $1 billion over the next five years. That's a big capital expenditure for us, or just about anybody. Those plans are proceeding and the products are coming."

Tippett said the company will start exporting Toledo-made Jeep CJs this month, starting with diesel-powered models. Gasoline versions will follow later this year. The diesel is a Renault four-cylinder 2.2-liter engine.

AMC already sells Jeeps in Italy, Germany, Spain, the UK and Switzerland through its international operations. Renault will handle distribution in France and Belgium, where the French company is particularly strong.

"I'd say we might expect to sell 5,000 to 10,000 Jeeps in Europe this year," Tippett said. "The four-wheel-drive market is much smaller there than here." But he expects it to grow.

• Tippett estimated the diesel-engine Jeep going overseas will boast the equivalent of 30 miles per gallon U. S. fuel economy in city driving. He said the U. S. Jeep CJ with four-cylinder gasoline engine gets 23 MPG city.

Next month AMC/Renault dealers in the U. S. will begin selling the Fuego. Reportedly, the introduction date is March 10 for the little sportster, whose price tag is expected to be in the $8,500 range.

Tippett said Fuegos have started arriving from Europe, "and by the time we get distribution sorted out, we'll probably launch in the middle of March."

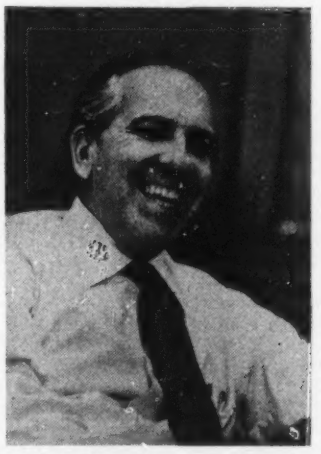
He said Fuego "will have turbocharged and fuel-injection versions. We're not just selling econoboxes here; we want to sell some things that get people's blood stirring a bit. I think it (Fuego) will have a significant appeal and bring some romance back into the business."

While declining to talk about specific price or planned import volumes, Tippett declared: "I think you'll be surprised at how attractively it's priced."

He added that prices will be in "a rather broad range, starting at about the Datsun 200-SX and going through Volkswagen Scirocco and Toyota Celica Supra—the cars we expect it (Fuego) to compete with."

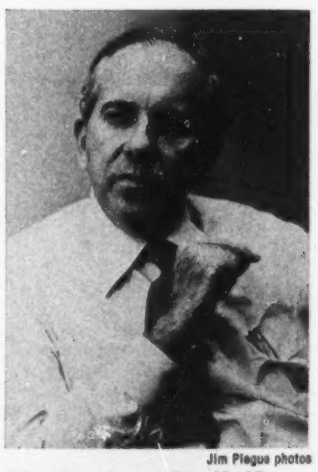
He said sales will depend on

Continued on Page 42, Col. 3



On Jeep

AMC Chairman W. Paul Tippett looks to European Jeep sales of 5,000 to 10,000 for '82. Next year, downsized Jeeps will debut. "The trick is to make them lighter and smaller without sacrificing packaging and toughness," Tippett says.



Jim Piegue photos

Big Numbers for X-42

"I think we'd want to sell 100,000 a year," Tippett says of the Renault car code-named X-42 that is to be built in Kenosha beginning this summer. AMC's current rear-drive cars are to be phased out by 1985, replaced with X-42 derivatives.

Debt to banks paid off early by Chrysler

By Edward Lapham
Financial Editor

DETROIT.—Chrysler Corp. officials could hardly conceal their glee last week when they announced early repayment of $47.5 million in bank debt which will save the company about $2.5 million in interest charges.

The payment, which will be made today (Feb. 1) instead of March 31, is the fourth and final installment in a $1.3 billion debt restructuring plan with 150 lenders. It will virtually remove all bank debt from the auto maker's balance sheet.

Chrysler Chairman Lee Iacocca said that the early payment is "only the latest indication" of "improved financial position."

He said, "Chrysler's cost-cutting efforts, its efficient manufacturing operations, and its strong sales performance in a severely recessed market have put us in a strong cash position."

Under the terms of the restructuring agreements, Chrysler's 150 lenders agreed to accept repayment of about half the $1.3 billion debt at the rate of 30 cents on the dollar. The other half of the debt was repaid with Chrysler preferred stock.

The company said it issued about 343,000 of the preferred shares, each with a redemption value of $3,200.

That means a total redemption value of nearly $1.1 billion in exchange for the $686 million in debt.

The $47.5 million payment made today is the final payment in the 30-cents-on-a-dollar portion of the bank debt.

The company also made a $71 million payment last March, a

Trade-zone status to save Chrysler $300,000 a year

DETROIT. — Chrysler Corp. has been granted free trade sub-zone status for its Jefferson Ave. assembly plant, which could save the auto maker as much as $1.5 million in duty payments over the next five years.

The status was granted by the Commerce Department through Greater Detroit Free Trade Zone, Inc., which last year successfully brought a free trade zone to the city.

The sub-zone status will allow Chrysler to pay a lower duty rate on imported Mitsubishi 2.6-liter engines it installs as an option in the K-cars assembled at the Jefferson Ave. plant by deferring duty until the vehicle is completed. The duty will then be lower than it would be on a component.

The company said the duty rate differential will amount to about $300,000 annually. The status is good for five years with an option to renew for an additional five years.

A company spokesman said some "procedural matters" need to be resolved before the company can assume the status. One source said the status is likely to go into effect this spring.

Ford Motor Co.'s Romeo (Mich.) tractor plant and Volkswagen's Westmoreland (Pa.) assembly plant also have sub-zone status.

All-new Town and Country for '82

About the only thing that stays the same on the Chrysler LeBaron Town and Country wagon for '82 is the simulated wood-grain exterior panels. The luxury downsized model is the first domestic midsize wagon with front-wheel drive, and it incorporates more than 30 chassis and suspension-system changes.

Chrysler's LeBaron wagon first in class with FWD

DETROIT. — Chrysler Corp. has unveiled the first domestic front-drive midsize station wagon, as the 1982 LeBaron Town and Country.

The four-door model is equipped with two bench seats for seating six. A four-cylinder, 2.6-liter (156 CID) Mitsubishi-built MCA-Jet engine is the only powerplant available. Rated at maximum of 92 HP and torque of 131 pounds-feet, the engine is mated to a three-speed automatic transmission.

Chrysler Corp. said some 30 suspension-system and chassis component changes were made to improve the ride and noise level in the downsized Town and Country wagon.

Included in the changes is an improved Iso-strut front suspension design using a linkless sway bar mounted directly to the suspension crossmember for greater roll stability. Reduced front coil spring rates and modifications to the steering arm geometry are said to provide better response in curves and turns.

Low-friction rear gas shocks and low-rolling-resistance steel-belted radial tires specially tuned to the car are both designed for a smoother ride. The front bumper and a dynamic absorber on the steering wheel hub have been tuned to absorb vibration inherent with transverse-mounted four-cylinder engines.

Town and Country employs hydraulic, diagonally divided power front disk and rear drum brakes. The system is said to stop the car evenly and quickly, even in instances of hydraulic failure. A new damped-iron rotor in the disk brakes is said to provide quiet, high performance.

Another engineering change for '82 is a new, quieter, lighter, five-blade engine fan.

The Town and Country continues to appeal to the upscale wagon buyer, with its simulated woodgrain exterior panels, standard plush carpeting, dual remote rearview mirrors and fully reclining adjustable front bucket seats.

Additional standard equipment includes clock, inside hood release, AM radio, dual horns and warning light package.

A rectangular grille is flanked by dual rectangular halogen headlamps.

The extensive optional equipment list includes a luggage rack with skid strips, wire wheel covers, aluminum road wheels, velvet high-back bucket seats and deluxe stereo and speaker package.

Town and Country is built on a 99.9-inch wheelbase and has an overall length of 179.8 inches; height, 52.7 inches; width, 68.5 inches, and curb weight, 2,710 pounds.

Japan reports on car exports

TOKYO. — Passenger-car exports from Japan numbered 293,839 in October, the most recent month for which detailed figures are available, according to the Japan Automobile Manufacters Assn.

North America accounted for more than half the total, with 133,344 going to the U. S. and 14,641 to Canada.

Other leading countries on the export list were: Australia, 12,099; West Germany, 13,678; the Netherlands, 9,696; Saudi Arabia, 7,924; New Zealand, 7,409; Belgium, 7,383; Malaysia, 7,247; Switzerland, 6,651; England, 5,678, and Nigeria, 4,606.

Continental Concept 90 lifts the curtain

Ford to accent aerodynamic styling

NEW YORK. — Aerodynamic styling, which the automobile industry has previously reserved for small sporty cars, will be introduced by Ford Motor Co. to the luxury market in the near future.

Ford is testing its "aero" design by displaying for the first time a one-of-a-kind model called Continental Concept 90 on the Lincoln-Mercury stand at the New York Auto Show. The

Picture on Page One.

show opened Jan. 30 and will run through Feb. 7.

Joseph E. Cappy, Lincoln-Mercury general marketing manager, told newsmen at a preview here that Continental Concept 90 will give luxury-car buyers "a taste of the mid-80's and beyond and will give us an opportunity to research the reaction to such a complete departure from the company's traditional luxury car design themes."

Donald F. Kopka, Ford vice president - Design, explained that "aerodynamic design not only is the most contemporary look in automotive styling, it also is the most fuel-efficient because it minimizes power-robbing air resistance."

Kopka said the "great majority" of cars of the future will remain in the four-to-six-seat size, but the aerodynamic influence will be clear.

"We believe our future cars will be so distinctive in appearance that they will be immediately distinguishable from everything else on the road," he said.

• Continental Concept 90 has the styling cues of Ford Motor Co.'s Continental luxury car. The Continental Concept 90 is a five-passenger car, and the rear deck lid carries a hint of the Continental "spare tire" conformation.

In profile, the sleek, rounded pearlescent-white two-door hardtop exhibits a subtle wedge shape that results in an estimated coefficient of drag rating of 0.32. The aerodynamic design also is apparent when viewed from above—slightly tapered at front and rear to hold airflow tight to the body.

"One of the most distinctive design elements of the Continental Concept 90 has important consumer benefits besides aerodynamics," said Cappy. "The doors are limousine-style and carry up into the roof surface. They not only provide easier entry and exit, they permit us to hide the drip rails within the door openings and gain a further reduction in air resistance."

Throughout, the car shows attention to aerodynamic detail. It has integrated, flush headlamps and wraparound taillamps, as well as flush-appearing glass. A lower front valance panel heightens aerodynamic efficiency, as does the concealed windshield wiper system.

Airflow openings are meticulously arranged to provide good cooling and excellent airflow management. The "fast" windshield and backlite angles contribute to the smooth airflow over the top of the vehicle and reduce air resistance, and the free-standing side-view mirrors are designed to be highly aerodynamic.

Bumpers are completely flush, integrated into the body shape, and an integrated wraparound moulding for bodyside and bumper protection carries around the car. Flush wheelcovers add further to the car's "slipperiness."

Complementing the design features that give the concept car its superb aerodynamic promise are several functional engineering features. Based on the principle that the stance of the vehicle as it meets the onrushing air affects aerodynamic drag, the car can vary its dynamic vehicle attitude and improve fuel economy by a further 4 percent.

Another advance is the thermostatically controlled louvered grille. It is designed to match the engine and air conditioning cooling requirements to the airflow over the surface of the car.

As low speeds, as when the car is climbing a steep grade at 30 miles per hour, a maximum amount of air would pass through the grille, for maximum cooling. At highway cruising conditions, the louvers' angle would change to minimize the cooling drag by diverting a greater proportion of the airflow over the car and improving fuel economy by an additional 6 percent.

Continental Concept 90 has a low profile, with an overall heights of 53.2 inches. It sits on a 108.3-inch wheelbase and is 200 inches long. By comparison, the 1982 Mark VI stands 55.4 inches, the wheelbase is 114.3 inches and length is 216.0 inches.

Toyota still studying reports on possibility of U. S. plant

TOKYO.—Toyota plans to invest about $1.2 billion this year, the same as in 1981.

About half that amount is going into Toyota's belated program to switch to front-wheel drive. Little money will be spent on new overseas plants, however, except in Taiwan, if as expected, Toyota wins that contract.

The company says that costs in the U. S. are too high, and blames the UAW for obtaining too-high wages from the manufacturers. However, Toyota is watching the current renegotiations with interest, and Shoichiro Toyoda, president of Toyota Motor Sales, told Automotive News that if the result is substantially lower manufacturing costs, then Toyota might think again.

However, Toyota is still mulling over the three reports on U. S. manufacture it commissioned a couple of years ago. These were submitted last March, yet the company says that it has yet to make a decision on the matter. This long delay makes a positive reaction very unlikely.

Toyoda said that a plant in Taiwan was much more attractive than one in the U. S., owing to the lower labor rates. In addition, Toyota hopes to be able to build quality products as a demonstration to its Japanese employes that quality is not a Japanese prerogative.

Toyoda said that it would be no problem for Toyota to sell cars built in Taiwan through its existing overseas sales network.

Mid-month tally is 129,894

New-car sales lowest since 1958

By Jenny L. King
Staff Writer

Domestic new-car sales kept a very low profile during the mid-January period. Presumably many customers were waiting for the outcome of the early renegotiations between General Motors, Ford and the UAW. Price reductions had been hinted at earlier in the month.

Total sales for the nine days between Jan. 11 and 20 were 129,894, down 4.86 percent from 136,524 a year earlier and lowest for the period since the 117,221 reported back in 1958.

The daily selling average was 14,433 based on nine days, down 15.43 percent from 17,066 for eight days a year ago.

All five major U. S. auto makers were down from 1981 on a daily-rate basis, while Ford Motor Co. was up on a year-to-year comparison. Ford sales numbered 33,397, up 10.19 percent from 30,308 (down 2.05 percent daily rate basis). General Motors, source of the price-cut rumors, was down 6.90 percent, to 77,247 from 82,976 (down 17.25 percent daily rate).

Chrysler Corp., which has not been involved with contract talks, was down 9.46 percent, to 14,846 from 16,398 (down 19.50 percent daily rate); Volkswagen of America plunged 54.03 percent, to 1,904 from 4,142 (down 59.03 percent daily rate), and estimated sales of American Motors passenger cars were 2,500, down 7.41 percent from 2,700 (down 17.60 percent daily rate).

DOMESTIC SALES

INDUSTRY TOTAL	129,894	136,524

†Estimate

GM earned 59.47 percent of the mid-month market, down from 60.78 percent last year. Ford helped itself to a generous 25.71 percent, up from 22.20 percent. Chrysler slipped to 11.43 percent from 12.01 percent. VWoA pinched off 1.47 percent, down from 3.03 percent, and AMC had the remaining 1.92 percent, down from 1.98 percent. On a year-to-year basis, six makes were up during the period. Lincoln enjoyed the greatest climb, up 58.21 percent; Mercury was up 14.28 percent; Oldsmobile was up 9.75 percent; Ford was up 6.26 percent; Buick was up 5.50 percent, and Chrysler was up 1.59 percent.

VWoA turned in the poorest performance, down 54.03 percent; Imperial was down 18.18 percent; Chevrolet was down 17.90 percent; Dodge was down 14.80 percent; Pontiac was down 10.97 percent; Cadillac was down 9.58 percent; Plymouth was down 8.69 percent, and AMC was down 7.41 percent.

Sales through Jan. 20 totaled 231,093, down 12.65 percent from year-to-date sales of 264,565.

Japan's top seller is Toyota Corolla

TOKYO. — Once again, the Toyota Corolla was the top selling passenger car in 1981 in Japan with 251,005 units.

It was followed by the Nissan Bluebird (810), 183,906; Mazda GLC, 166,284; Nissan Sunny, 160,180, and Toyota Cressida, 116,724. Indiciations are that the Bluebird will fall below the GLC and Sunny this year.

Large car plans scrapped

Cash, sales woes kill Opel Rekord project

BERLIN. — A new Opel Rekord, scheduled to go into production in August/September, 1983, as a 1984 model, has suddenly been canceled.

Preliminary designs showed a car of conventional concept and fairly large size, continuing the Rekord's traditional role of bridging the gap between the mid-size family car (Ascona) and the big luxury car (Senator).

Some of the reasons for the cancellation are obvious, while others remain obscure. It is known the General Motors subsidiary is going through something of a liquidity crisis, and that pressure was put on management to make cutbacks in its spending plans, including investment spending.

Why the Rekord was chosen for the chopping block also is no mystery.

Current models have not lived up to sales targets, and to replace them with a more modern design to fit into the same slot in the market was an idea that lately lost its attraction.

The mystery concerns Opel's alternative plans. One option is not to replace the Rekord with a separate car line.

Model breakdown
Auction Averages

	January To Date	December	November

1979	5,437	4,321	4,857
1978	3,627	3,475	3,782
1977	2,920	2,590	2,733
1976	2,368	2,026	2,099
1975	1,829	1,361	1,562
Overall Average	$5,021	$4,117	$4,315

Hoover appointed

FOUNTAIN VALLEY, Calif. — Mitsubishi Motor Sales of America has appointed Jeanne K. Hoover sales promotion and merchandising manager. She formerly was vice president, account supervisor at Campbell-Ewald Co., Hollywood, Calif.

It is doubtful that Opel's marketing specialists will allow the Rekord name to die, and it is easy to visualize a stretched Ascona (J-car) with more power and higher-grade trim and equipment to fit into the Rekord price slot.

Ditching the Rekord program does not mean Rekord production will necessarily end in the summer of 1983. If there is a continued demand of sufficient volume for the old model, Opel could keep it in production into the second half of the 1980s.

Nor does it mean that an all-new Rekord program cannot be activated later. That looks less and less likely, however, in view of Opel's downward expansion in the market, with the addition in 1982 of the S-car below the Kadett.

Opel's high-volume car lines will then be the S-car, the Kadett and the Ascona. A new Rekord with specific components could probably not be justified by the expected sales volume.

As for the problem of filling the gap between the high-volume cars and the Senator/Monza prestige models, it may disappear by itself. The Senator/Monza, new in 1979, never gained the expected popularity and Opel is losing money on this car line.

If the cars are discontinued, Opel has the freedom to build the future Rekord, if it decides to go with one, at whatever market level is favorable for a new entry.

Steel-belted most popular on '81 cars, but fiberglass gains, too

Radials are boss, but what kind?

By Joseph Bohn
Marketing Editor

With radial tires now standard equipment, the only question is what kind of radials will auto makers be using in the future?

Meanwhile, white sidewall tires continue to be very popular, although raised-letter tires appear to have very limited appeal, an AUTOMOTIVE NEWS survey of '81 model car production reveals.

Radial tires, whether of steel or fiberglass-belted construction, went onto 99.72 percent of domestic '81 cars. Except for temporary-use spares, all '82 models have radials.

However, the kind of radial mix offered on future models is still a moot point — since auto companies, although they prefer the longetivity of steel radials, are also trying to hold costs down.

In the '81 model year, 69.94 percent of domestic cars had steel-belted radials, up slightly from 68.97 percent penetration in '80.

Meanwhile, penetration of fiberglass-belted radials jumped to 29.78 percent from 26.47 percent in '80.

General Motors is still unwilling to commit itself to an across-the-board use of steel radials, as Ford Motor has done.

On the new J-cars, for example, the Cadillac Cimarron had standard steel-belted radials, but the Chevrolet Cavalier had an 87.20 percent penetration of fiberglass-belted radials.

GM will probably continue the pattern of offering versions of each, depending on the car's price range and other appointments.

Chrysler continues to be the heaviest user of fiberglass-belted radials, with an 84.17 percent penetration, up from 81.23 percent in '80.

Since cost-cutting is the name of the game these days, it remains to be seen whether Ford can continue to afford top-of-the-line steel radials as standard equipment on all future models.

Volkswagen put steel radials on 98.7 percent of domestically built Rabbits and didn't offer a glass-version of the radial last year.

White sidewall, or striped tires, went onto 81.57 percent of cars last year and raised-letter tires onto 3.19 percent. The total of 84.76 penetration of these fancier types of tires compared with a combined 85.94 percent penetration on '80 models.

Toyota Soarer honored

Toyota announced that its Soarer has been named Japan's car of the year for 1981-82. Toyota said the award is presented by a 14-member committee of experts in automotive and mass media fields. The Soarer, which is not sold in the U. S., has the basic underpinnings of the Toyota Supra.

NOTE: Figures are generally based on U. S. production. However, Canadian-only sourced cars, such as Cordoba/Mirada, are included in some instances; also, some '82-only models, such as EXP/LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,513 Chrysler models, 137,125 AMC and 179,635 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,673,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouths and 311,988 Dodges.

Study in plastic body panels more than a Fiat show car

TURIN, Italy. — Fiat has unveiled a prototype which it is using to investigate mass production techniques for plastic body panels.

Although the prototype is expected to be nothing more than a show car, the money spent on its development may have been profitable for Fiat. Introduction was timed to put pressure on the Italian government to grant Fiat a long-awaited $1.25 million for automotive R&D.

The plastic prototype project was financed by Fiat but developed by a recently established research organization here, the Institute of Automotive Development (I.D.E.A.). It is directed by Franco Mantegazza and staffed by Fiat and independent experts.

The grant that Fiat is seeking would represent 30 percent of the company's planned R&D expenditures for the 1981-85 period.

Meanwhile, introduction of the all-new replacement for the 127 has been delayed until at least winter, 1982. The decision to delay the "Modello Uno" was made more than a year ago. Its design was said to be unsatisfactory.

As a consequence, the 127 is to remain on the market and was facelifted for its December introduction.

Trade bill eyed; would give U.S. firms a break

WASHINGTON. — A broad trade bill involving changes in regulations on dumping, escape clause and reciprocity is under consideration by Senator John Heinz, Pennsylvania Republican, who is up for election this year.

Of special concern to the auto industry is a provision which Heinz says could give the President greater authority to retaliate against countries that do not provide U. S. producers with reciprocal access to their markets for goods and services.

Moreover, Senator John Danforth, Missouri Republican, who chairs the Trade Subcommittee of the Senate Finance Committee, has expressed interest in a similar move obviously aimed at U. S.-Japan auto trade.

Riviera appoints Haas

HILLSBORO, Ore. — Jeffrey W. Haas has been appointed district sales manager in western Washington for Riviera Motors, Inc. Riviera is the Volkswagen distributor for Washington, Oregon, Montana, Idaho and Alaska.

Pontiac appoints eight to product engineering posts

PONTIAC. — Pontiac has announced eight appointments on its product engineering staff.

William G. Hartmann has been named body staff engineer and assumes responsibilities for GM Design Staff liaison and interior color and trim projects.

John Seaton has been appointed staff engineer for heating, ventilating and air conditioning. He also assumes the responsibilities of GM lead division engineer of HVA/C.

Richard V. Trax has been appointed staff engineer, experimental engineering.

Robert R. Kern is the new assistant staff engineer, experimental test.

Richard T. Hartzell has been named staff engineer — project manager organization. His responsibilities include car line project managers, mass control group, export engineering and product information.

John A. Alfes has been appointed staff engineer—advanced engineering.

Edward W. Hufnagle is the new project manager for Pontiac's A-car and X-car lines.

Dean O. Hilke has been named supervisor of the product compliance, surveillance and certification group. He is responsible for engine emissions compliance with the government regulations.

Herbert E. Kadau has retired after 31 years with Pontiac and General Motors.

February schedule is 16 pct. below last year

14 plants idle; auto output drops

By Patricia Hoffman
Staff Writer

Downtime at 14 assembly points last week dragged domestic auto production down from the previous week's output, and the year-to-date total remains substantially below that of the comparable 1981 period.

Last week, the auto makers scheduled 80,141 units, off 11.86 percent from 90,925 the previous week and down 33.06 percent from 119,713 in the comparable 1981 week.

For the first four weeks of production this year, the makers have built 281,459 cars, down 38.60 percent from 458,888 in the comparable 1981 period.

For February, the makers forecast 403,368 cars, down 16.33 percent from 482,074 in the same month last year.

Checker Motors is the only company scheduling a gain for February, with output slated at 400 units, up 60.64 percent from 249 built in February last year.

February breakdown for the other companies is: General Motors, 255,000, down 14.43 percent from 298,004 last year; Ford Motor, 73,000, down 25.13 percent from 97,505; Chrysler Corp., 56,000, down 12.55 percent from 64,033; Volkswagen of America, 14,268, down 13.88 percent from 16,568, and American Motors, 4,700, a drop of 17.76 percent from 5,715.

Of the fourteen assembly points idle last week (Jan. 25), nine were at General Motors. They were: Arlington, Baltimore, Framingham, Janesville, Lansing, Lordstown, Oklahoma City, Willow Run and Wilmington. The Oklahoma City and Janesville facilities were idle for changeover. The others were down for inventory control.

GM's Fremont plant will cut production today (Feb. 1) from two shifts at 45 units an hour to one shift at 45 an hour. There will be 1,900 workers on indefinite layoff. Fremont builds Celebrity, Cutlass and Cutlass Ciera.

Also dropping a shift starting today is GM Lakewood. The plant was building 46 units an hour on two shifts and now will turn out 46 an hour on one shift. There will be 1,500 workers put on indefinite layoff. Lakewood assembles Chevette, T1000 and Acadian.

Also idle last week were Ford's Atlanta, Dearborn, Kansas City and Wayne facilities and Chrysler's St. Louis point.

Daily overtime was scheduled last week at Ford Wixom. The plant operated nine-hour daily shifts.

AMC's Kenosha point will be idle starting today. The plant is slated to resume Feb. 8, with a line-rate reduction from 510 units a day on one shift to 310 a day.

Breakdown for last week by company is: GM, 65.21 percent; Chrysler, 15.35 percent; Ford, 12.87 percent; VWoA, 4.45 percent; AMC, 2.0 percent, and Checker Motors, 0.12 percent.

Week's truck output rises; gain slated for February

The gradual line-rate increase of the new Ranger compact at Ford Motor's Louisville point and the return of American Motors' Toledo (Jeep) facility helped boost domestic truck production last week.

Production of the Ford Ranger began Jan. 18 on two shifts at Louisville. Output will increase until the full rate is reached in April. Ford would not disclose what that rate will be.

U. S. truck production was targeted at 38,563 units last week, a gain of 2.40 percent from 37,658 the previous week, and up 4.66 percent from 36,846 the comparable 1981 week.

So far this year, the makers have finished 124,548 trucks, down 14.54 percent from 145,731 in the comparable period last year.

Most of the makers forecast gains for February, with total output slated at 143,352 units, up 11.89 percent from 128,121 in the comparable 1981 month.

Only International Harvester and Volkswagen of America expect declines this month. International is slating output at 3,500 units, down 39.59 percent from 4,971 a year ago; VWoA, with 2,852, will be down 30.66 percent from 4,113.

Production by other companies is expected to be up in February with General Motors targeting output at 65,000, up 4.70 percent from 62,084 last year; Ford, 53,000, up 16.62 percent from 45,447; Chrysler, 12,000, up 140.43 percent from 4,991; and AMC, 7,000, up 7.44 percent from 6,515.

GM's Lordstown (van) facility was idle last week for inventory control. The plant will also be down this week.

AMC's Toledo (Jeep) facility will be idle this week. Operations are scheduled to resume Feb. 8 with a line-rate reduction from 395 units a day on one shift to 350 units a day.

Car production in Canada shows gain for January

The return of Ford Motor's St. Thomas facility last week helped boost Canadian auto production 9.52 percent from the previous week's output despite downtime at General Motors' Oshawa (No. Two) point.

The auto makers scheduled 20,406 units last week, up from 18,633 the previous week, and a substantial jump from 2,825 completed in the comparable 1981 week.

The estimated January output is 51,508 cars, up 12.41 percent from 45,822 in the comparable period last year.

The truck makers slated 8,947 units last week, down 16.06 percent from 10,659 the previous week due to downtime at GM's Scarborough (van) facility. The total was also down 24.66 percent from 11,876 in the comparable 1981 week.

Truck output for January is estimated at 30,056 units, down 34.05 percent from 45,574 in the comparable January, 1981.

GM will begin one-shift operations today (Feb. 1) at its St. Therese car facility. The single shift will assemble 45 units an hour, the same number as was previously produced on two shifts.

Downtime is slated for GM's Oshawa truck facility starting next week (Feb. 8). The point will be idle one week for inventory control.

Debt to banks paid off early by Chrysler

Continued from Page 3

$24 million payment in September and a $47.5 million payment in December, for a total of $190 million repaid on $618.9 million in debt. In addition, the company made a full-force, 100-cents-on-the-dollar payment of $4.2 million to a few lenders last year.

In his statement, Iacocca again mentioned the progress Chrysler has made in reducing costs while maintaining future product programs and improving current product.

"We are determined to continue our aggressive actions to move through this economic downturn," he said. "And when the upturn comes, Chrysler is ready to go."

Two weeks earlier, Iacocca told a press conference the company is financially "very close to break-even" with a monthly sales volume of 65,000 cars and trucks.

Centauri at NADA

Winnebago's $8 million gamble

A plush van conversion with a body by Winnebago, Inc., mounted on a diesel-powered chassis designed by Renault of France will make its public debut at the NADA convention and exposition in Atlanta Feb. 20-23. Winnebago said it is gambling $8 million in development costs that the unit, called Centauri, will be a big hit in the luxury van market. Story on Page 16.

UAW's demand at Ford: Replace exported jobs

By Marjorie Sorge
Labor Editor

DEARBORN.—The UAW will ask for an automatic reopener and labor content plan in its opening proposal to Ford Motor Co., according to a high-ranking official.

That proposal could come this week and will be a counter offer to one Ford has had on the table since Jan. 15. Ford talks were on the back burner while the union and General Motors negotiated.

The UAW asked for an automatic reopener at GM during talks there. The clause would have reopened the contract for negotiations if car sales improved to a specified level. If GM sales increased above the average for the 1977-80 period, the contract could have been reopened, officials said.

At Ford, no such trigger level has yet been determined. But the offer of profit sharing in the Ford proposal could make it higher than it was at GM, officials said.

The UAW will also put a labor content proposal on the table. It will be a demand that every job exported by Ford be replaced by a job imported from one of its overseas subsidiaries.

The union is also hoping to work with Ford to lower the costs of insurance during the course of the contract. UAW Vice President Donald Ephlin had said earlier that certain health care benefits are not giving the union its money's worth. Those, he said, could be eliminated, but that elimination might not be part of the contract currently being negotiated.

Some union insiders also think costs could be cut by giving workers participating in group-practice plans full coverage, while those using private medical services would co-pay.

• The Ford proposal calls for a new national contract which would expire in September, 1984. Local agreements would extend for the duration of the new contract. The current national contract expires Sept. 14, 1982.

That proposal gives workers with 15 years or more seniority guaranteed income for life if they are laid off or their plant is closed. That income would be at least 50 percent of their base hourly rate until (30-and-out) retirement or age 62.

Workers with 10 years or more seniority could get a maximum of two years supplemental unemployment benefits (SUB) pay if they were laid off.

Ford also proposed a one-year moratorium on plant closings while holding onto the right to close plants. Employes who lose jobs if plants close would have preferential hiring rights on other work within the company.

Ford has closed six parts and assembly plants since October, 1979, costing around 10,850 hourly and salaried jobs. It has also notified workers the Sheffield (Ala.) aluminum casting plant it will be phased out beginning in March, affecting 940 production workers and 166 salaried employes.

The Sheffield plant was closed because workers refused to accept wage and benefit cuts requested by Ford last November. Ford has said the plant was a losing operation.

UAW Vice President Donald

Justice Department papers tell almost all

Chrysler-Mitsubishi pact detailed

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Most of the details of the dual distribution agreement between Chrysler Corp. and Mitsubishi have been obtained by AUTOMOTIVE NEWS from Justice Department papers.

Only a few closely guarded secrets have been excluded — identities of models for 1983 and later, certain spending figures such as for advertising, and the price formula used by Chrysler to pay Mitsubishi.

Unlike the previous agreement between the firms, which was in perpetuity, the changes finalized last September expire in 1990, although they are subject to renewal.

Mitsubishi is not expected to start selling under its own banner until the 1983 model year, although dealers for Mitsubishi Motor Sales of America (MMSA) could start selling models identical to those the parent company builds for Chrysler Corp. in the 1982 model year.

Mitsubishi had long wanted its own dealer network in the U. S. After two years of negotiations, it got a new agreement last September. Chrysler, which holds a 15-percent stake in Mitsubishi, bargained away its right to be sole U. S. distributor of the Mitsubishi-built cars and light trucks.

Mitsubishi committed itself to providing financing for vehicles shipped to Chrysler (more correctly, to delay the sale or title change for vehicles held in ports for varying periods). That commitment expires in 1985.

Justice Department papers show the changes allow both distributors — Chrysler and MMSA — to sell identical models for a certain period, as well as to sell different models.

Chrysler got the blessings of both the Justice Department's Antitrust Division and the Chrysler Loan Guarantee Board to restrict Mitsubishi from dualing with Chrysler dealers or stealing Chrysler dealers for its own network.

Complex arrangements were hammered out to deal with limitations imposed by the so-called voluntary quotas on Japanese imports.

Mitsubishi's allotment of the total Japanese imports is to be shared between Chrysler and MMSA.

Chrysler wanted to be sure all its orders under a quota system would be honored. It also wanted to make sure Mitsubishi would not retain the so-called "hot" products for its own MMSA dealers, or perhaps provide them for markets other than the U. S.

• The massive and intricate agreement sets up procedures to find out in advance Chrysler's minimum commitments for each future model year. At the same time, it provides assurances that Mitsubishi will not discriminate against Chrysler in favor of its own subsidiary.

This means the prices to both distributors will not tilt against Chrysler, and will give Chrysler margin for the profit it has historically realized.

Chrysler will have access to a wide variety of models and generally to volumes at least equal to 10 percent of the total number of Japanese imported cars and 23 percent of certain Japanese imports of small trucks.

Chrysler and MMSA will have the same deal for certain advertising, promotion or sales incentive programs allowed by the factory.

The agreement also stipulates that before April 1, 1985, MMSA will not franchise any dealer who has had a Chrysler franchise during the preceding six months at the same sales or ser-

breaking news

New Jersey V-8-6-4 case is state class action

MORRISTOWN, N. J.—A lawsuit filed by Adrian Karp charging that the Cadillac V-8-6-4 engine is a safety hazard has been ruled a state class action by Superior Court Judge Arnold M. Stein. That ruling makes about 7,500 New Jersey residents who are past or present owners of '81 Cadillacs with the V-8-6-4 eligible to participate in the suit. About 150 have already shown an interest.

Ford's '81 loss put at $1 billion

DEARBORN. — Ford Motor Co. will report a loss of more than $1 billion for 1981, according to Peter J. Pestillo, vice president, labor relations. The loss figure came in response to requests by the UAW, which is currently negotiating with the company. Pestillo said Ford has not ruled out asking for a wage freeze in any new contract.

Fisher Body to close trim plant

DETROIT. — Fisher Body has announced it is permanently closing its automotive trim plant in Euclid, O., idling another 1,115 workers in addition to 300 already on indefinite layoff. The closing was said to be a direct result of the breakdown in General Motors-UAW contract negotiations on worker concessions.

Output slumps to 35-year low

By Patricia Hoffman
Staff Writer

The domestic auto makers started 1982 on shaky ground as January production was the lowest for that month in 35 years, and the lowest for any month since August, 1968.

The makers finished 280,179 units in January, a 39.39 percent drop from 462,284 completed in the comparable 1981 period, and the lowest total for the month since 1947 when only 248,657 cars were built. Production hasn't been lower for any month since August, 1968, when the makers completed only 196,823 due to model changeover.

Only one of the six auto companies showed a gain last month. Checker Motors finished 200 units in January, up 17.65 percent from 170 in the comparable 1981 month.

Losses for the other companies were: General Motors, down 36.31 percent from 300,313 to 191,267; Ford Motor, down 58.21 percent from 97,698 to 40,832; Chrysler Corp. down 11.55 percent from 41,725 to 36,905; Volkswagen of America down 45.82 percent from 12,923 to 6,996, and American Motors down 57.96 percent from 9,465 to 3,979.

With 21 assembly points idle last week, the auto makers targeted output at only 59,923 units, down 22.17 percent from 76,993 the previous week and down 51.02 percent from 122,345 the comparable 1981 week.

So far this year, the manufacturers have completed 340,102 cars, a drop of 41.83 percent from 584,629 in the comparable period last year.

There were 19 car assembly plants idle last week for inventory control, plus two which remained down for model change-

AMC sweetens pot; Chrysler response due

Ford is matching GM's rebates

By Joseph Bohn
Marketing Editor

Rebates once again have become the promotional tool with which Detroit hopes to market its way out of a sales slump.

In the wake of General Motors' rebate announcement, Ford, Chrysler and American Motors all went back to their drawing boards to come up with competitive programs.

What happens when it all ends in April is anyone's guess. But, for the time being, dealers should see a sharp increase in traffic, field stock should come down and sales should increase to the benefit of everyone.

A lot of promotional hoopla and ad support is being given the rebate programs, both on corporate and divisional levels.

Ford Motor's response to the GM rebate is a program that pretty closely matches GM's.

Ford's rebates run from Feb. 2 to April 3. They cover '81 and '82 new cars and trucks, with a 25 percent dealer contribution on all vehicles, except the Courier pickup for which there is no dealer cost-sharing.

Ford is giving dealers a choice of retaining its previous dealer cash incentive program or taking the new rebates. The vast majority of dealers are expected to opt for rebates.

In switching to rebates, Ford also dropped a previous cash-payments-to-salesmen program it had in effect.

Under its new program, Ford continues to offer rebates of 5 percent on Escort/Lynx and the two-year-warranty / free-maintenance program for those models. It has now been extended to April 3.

Ford also retained a special $500 dealer cash incentive payment on EXP/LN7, now extended through April 3. The EXP/LN7 also qualify for the two-year - warranty / free - maintenance-coverage program plus a 5 percent rebate.

• During Feb. 2 to April 3, Ford also is offering $750 rebates on Fairmont/Zephyr, Mustang/Capri and Granada/Cougar, with a 25 percent dealer contribution.

At Lincoln-Mercury, there is a $2,000 rebate on Continental, with a 25 percent dealer contribution.

LTD/Marquis get $500 dealer incentives, after a one-unit qualifier.

Ford is also paying $750 rebates on all light-duty conventional size pickup trucks, vans, Broncos and club wagons.

It has a separate program for Courier pickups.

The '82 Couriers come in for a $750 rebate.

The '81 Couriers continue to receive $750 dealer cash incentives, previously offered, through Feb. 10, plus a new $250 consumer rebate.

On Feb. 10, '81 Couriers are divided into two payment groups.

Those Couriers eligible for a $750 dealer cash incentive under a previous order provision program (dealers had to order and retail the units within 60 days of receipt) will continue to be eligible for a $750 dealer cash incentive, beginning Feb. 10, plus a $250 consumer rebate.

All other '81 Couriers, previously in dealer inventory and not subject to the order provision, qualify for a flat $750 consumer rebate. (No cash incentive.)

Ford's rebates on cars and trucks require that a unit be retail delivered between Feb. 2 and April 3; or a dealer can place the customer order by Feb. 28 (it can be received in the zone office by March 3) and the vehicle qualifies for a post-April 3 delivery rebate.

Ford also has a separate fleet rebate program.

The fleet rebates cover only '82 units and don't include any dealer cost sharing.

Ford is paying fleet buyers $500 on Escort/Lynx, $600 on Fairmont/Zephyr and $600 on Mustang/Capri and Granada/Cougar.

Also, it is paying $550 on pickup trucks, vans, club wagons and Broncos; $750 on Courier pickups and $375 on the new Ranger compact truck.

To qualify, all fleet rebate vehicles must be delivered between Feb. 2 and April 3, or orders must be received in the factory field office by March 17 for post-April 3 delivery.

Ford had previously offered a 24-month-warranty / free-maintenance program on some fleet vehicles, and this has been discontinued.

Ford will spend $15 million over a two-month period promoting its rebates and "carefree maintenance" offer, according to Philip E. Benton Jr., vice president for sales operations.

Benton anticipated the new marketing program would increase sales of covered models by 20 to 25 percent which would offset costs enough to make it profitable.

If Ford picked up only 15 percent more sales volume, that would not be enough to make it profitable, Benton said.

• General Motors earlier kicked off a "Let's Get Moving" rebate campaign, paying from $500 to $2,000 on units delivered between Feb. 1 and March 31.

The GM program covers '81 and '82 X-cars, J-cars, the new A-bodies, Chevette/T1000 and Seville, along with trucks and vans.

There is a 25 percent dealer contribution.

Payments include: $2,000 on Cadillac Seville; $750 on Chevrolet Cavalier, Pontiac J2000; Oldsmobile Firenza; Buick Skyhawk and Cadillac Cimarron.

Also, there is a $750 rebate on Chevrolet Citation, Pontiac Phoenix, Oldsmobile Omega and Buick Skylark.

The new Chevrolet Celebrity, Pontiac 6000, Oldsmobile Cutlass Ciera and Buick Century (front-drive models only) come in for $500 rebates; the Chevette and Pontiac T1000 for $500, also.

Additionally, GM has rebates on all its light trucks.

The Chevrolet and GMC light-duty trucks, including pickups,

His third store

Don Carter, right, president of the newly opened Carter Lincoln-Mercury of Bridgeton, Inc., Bridgeton, N. J., shows off the new facility to William E. Nieporte, L-M's Philadelphia district sales manager. Carter owns and operates three Lincoln-Mercury dealerships in New Jersey.

World champion is sure-footed

Hurling this Ford Escort over some of the worst roads in the world, Finland's Ari Vatanen won the 1981 World Rally Drivers' championship. The 29-year-old Vatanen won three championship rallies, in Greece, Finland and Brazil, on his way to the title. He used Pirelli P7 radials, and his victory made a total of nine World Rally Championships won in the past 10 years on Pirelli tires.

Sales problems, heavy layoffs expected

GM-UAW failure will hurt both

By Marjorie Sorge
Labor Editor

Heavy layoffs and slow sales will almost certainly result from the failure of the UAW and General Motors to negotiate a new contract which would have lowered labor costs and car prices, according to UAW President Douglas A. Fraser.

GM has already tried to perk up the dead new-car market by offering rebates on about half its car lines without any aid from union concessions. That plan would have been longer and covered more vehicles had an agreement been reached, according to GM Chairman Roger B. Smith.

But when the Jan. 28 midnight deadline came, the company and the union were still decidedly split on job security and outsourcing, Fraser said. He said GM had offered the union a better plan earlier that week but backed off on the deadline day. Other sticking points were in economics and equality of sacrifice.

Although the parties were far apart, union officials conceded it would have been difficult to sell any contract concessions to the membership.

The UAW/GM Council voted by a 57 to 43 percent margin to continue negotiations after talks had first broken off. The close margin put a cloud over talks as they resumed and showed that the workers were very cautious about concessions, Fraser said.

GM's year-end report of $333 million profit and no cut in the dividend would also have made it more difficult to sell any scaled-down contract, sources say. The profit represented a $1.1 billion turnaround from the $763 million GM lost in 1980.

The union had demanded equality of sacrifice from all non-UAW groups at GM including white-collar workers, executives and stockholders.

Also, the union's 11-member bargaining team was divided on the advisability of granting concessions and Fraser admitted there were differences in the ranks.

"There was no dissension," he said. "There was a helluva lot of debate. I'm proud of the committee, and the disagreements they had are no different than the disagreements among 11 other people."

Breaking off the talks without an agreement leaves both GM and the UAW in poor strategic and image shape. GM had promised to pass through all labor savings to the consumer by lowering prices. Since the announcement was made over four weeks ago, GM sales have fallen off as consumers waited to find out what the specific decrease would be in sticker prices.

"We knew going in that if we didn't succeed it would have a detrimental impact on the image of the UAW," Fraser has said. "It was a risk that we took. Certainly this is a setback from a public relations point of view."

Fraser said he now expects the consumer will be angry with both GM and the UAW and indicated he expects sales to remain sluggish. He said GM sales are probably softer now than they would have been if negotiations had never begun.

But GM is trying to counter-

Dealer shop business winds up a good year

By Francis J. Gawronski
Service Editor

The nation's new-car dealers had a good month of service and parts business in December to close out one of their better shop years.

According to the Automotive News Service Index, service and parts business in December amounted to 106.3 percent of the business achieved in the same month in 1980.

December also marked the 10th consecutive month in which the dealers' shop volume showed an increase over the year-earlier month.

Service and parts business for all of 1981 amounted to 105.5 of the business conducted in all of 1980 for the eighth best showing in the 21-year history of the Service Index.

The 12-month record occurred in 1978 when the service-parts volume increased 12.0 percent above the business for the previous year.

All indicators used in the Service Index, except repair orders written, made good gains in the 12-month period of 1981 and in December.

Gross profit on all labor, parts and accessory sales — the most important indicator to dealers — gained a healthy 9.2 percent over the previous 12-month period. Profits were up 4.9 percent in December.

Repair orders for the year were down 3.2 percent from the year-earlier figure. December showed a decline of 1.5 percent in the number of repair orders written in the same month the year before.

Total labor sales — customer paid and warranty — climbed 4.3 percent for the 12-month period and 8.1 percent in December.

Shop parts sales (customer-paid and warranty) advanced 6.7 percent in 1981 and 9.5 percent in December.

Sales of all parts and accessories increased 8.8 percent for the year, while December's business increased 10.2 percent over the volume recorded in the same month in 1980.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross-section of the nation's new-car dealers.

SERVICE INDEX
106.3*

	Dec., '81 vs. Dec., '80	12 mos., '81 vs. 12 mos., '80
Gross Profit on All Labor and P&A Sales	+ 4.9%	+ 9.2%
Repair Orders Written	− 1.5%	− 3.2%
Total Labor Sales (Customer & Warranty)	+ 8.1%	+ 4.3%
Shop Parts Sales (Customer & Warranty)	+ 9.5%	+ 6.7%
Sales of All P&A	+10.2%	+ 8.8%

*—Survey by Automotive News shows that dealers' service and parts business in Dec., 1981, was 106.3 percent of business in Dec., 1980. Service business in the 12 months of 1981 was 105.5 percent of business in the corresponding period in 1980.

A move to revive 2 major operations

Stempel to lead Chevy; Lund heads GM sales

By John K. Teahen Sr.
Managing Editor

Thirteen months ago, General Motors promoted F. Alan Smith to executive vice president in charge of finance, putting him in line for the chairman's job when Roger B. Smith retires in 1990.

Last week, GM may have tagged a future president: Robert C. Stempel, 48.

Stempel was named general manager of Chevrolet, GM's most important division, but one that lately has not been living up to the corporation's high expectations.

Stempel's appointment was one of a series of high-level personnel changes at GM last week.

At Chevrolet, Stempel succeeds Robert D. Lund, 62, who moved to vice president in charge of the Sales and Marketing Staff.

Stempel, a GM vice president, returns from West Germany where, for the past 18 months, he has been managing director of Adam Opel A. G. and responsible for GM's European-sourced passenger-car operations.

GM made two other vice-presidential changes last week.

Ferdinand P. J. Beickler went to Germany to replace Stempel, and Robert D. Burger was named assistant general manager of Cadillac. Beickler, a vice president since 1979, is a former Opel man who has been chairman and managing director of Vauxhall Motors, Ltd., in England. Burger had headed the Sales and Marketing Staff.

GM watchers couldn't remember when—or if—GM has ever had an assistant general manager of a car division. But Burger may be an assistant with the right of succession. Edward C. Kennard, Cadillac general manager, is 62. Burger is 57.

Chevrolet has been an important steppingstone to the top for the last three GM presidents. Edward N. Cole, Elliott M. Estes and F. James McDonald all headed that division.

McDonald, the current president, is 59. Stempel is young enough to succeed him. He may even be young enough to succeed McDonald's successor.

Stempel has been given the difficult job of turning Chevrolet around. The division has faltered the last couple years. As general manager, Lund must bear a portion of the blame, but many observers feel it's a bum rap.

Internal factors, like GM's pricing policies and product-sharing among divisions, have contributed to Chevrolet's troubles. So have external factors like the sky-high interest rates and the economic downturn.

But wherever the blame lies, it's a fact that Chevrolet's sales last year were down 17.47 percent from 1980 (which was no barn-burner) while Buick, Oldsmobile and Cadillac sales were up and Pontiac was off 10.16 percent. GM as a whole was down 7.77 percent.

Put it another way: Chevrolet car sales were down 305,253 units last year. GM's car sales (including Chevrolet) were down 319,786. Chevrolet accounted for 37.99 percent of GM's car sales in 1981, down from 42.45 percent in 1980.

If Stempel can change those numbers—and it will be a monumental task—he'll certainly be on his way to the corporate heights.

Stempel has been with GM since 1958. He was at Oldsmobile in engineering until 1973 when he became assistant to the GM president (Cole). He moved to Chevrolet in 1974 and was director of engineering for Chevy when he was named Pontiac general manager in 1978.

In August, 1980, Stempel went to Opel, gaining the overseas experience that is so necessary to top auto executives these days. Opel has been having its troubles, too, and the German operation isn't out of the woods yet. Stempel wasn't really there long enough for Opel to show the effects of his ministrations.

Opel, incidentally, is no far-flung outpost on the GM map. In recent years, it has vied with Oldsmobile for second place in vehicle production among all GM units. Chevrolet is first, of course, by a wide margin.

Lund's move to the Sales and Marketing Staff can be viewed as an effort to pump new life or a different life into that activity. Chevrolet's current troubles notwithstanding, Lund has the well-earned reputation of a super-salesman.

He's been with GM 36 years, all but two of them with Chevrolet. The two non-Chevy years (1973-74) were spent as general manager of Cadillac. He was Chevrolet general sales manager when he went to Cadillac at the beginning of 1973, and he returned to Chevrolet as general manager in November, 1974.

• GM made several other personnel changes last week, one of them overseas and a number on this side of the pond.

John M. Fleming, 51, succeeded Beickler as chairman and managing director of Vauxhall. Fleming had been Vauxhall's director of commercial vehicle operations. He's a onetime Oldsmobile marketing director and assistant general sales manager and also has been Opel sales director.

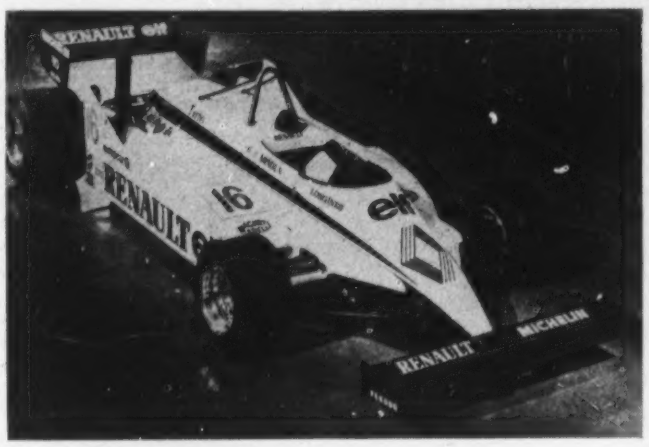
William B. Larson, 50, director of the Worldwide Product Planning Group, was named program manager of new-vehicle development, reporting to the office of the GM president.

Larson's successor was something of an eyebrow-raiser. John M. Smith Jr., 43, corporate comptroller, was named director of the Worldwide Product Planning Group.

A finance guy as GM's top product planner? Well, Roger Smith and former Chairman Thomas A. Murphy had non-finance assignments on their way up the ladder. So did F. Alan Smith. John Smith may be a name to paste in the GM future book. One thing is certain: He has the surname for it.

Robert T. O'Connell, 43, corporate treasurer, was elected comptroller, succeeding John Smith, and Courtney F. Jones, assistant treasurer, moved up to treasurer, succeeding O'Connell.

W. Gordon Binns Jr., 52, coordinator of pension fund investment and assistant treasurer, was named chief investment funds officer, reporting to the vice president in charge of the Financial Staff.



Racer from Renault

The 1982 turbocharged Formula One Renaults will be coded RE 30/Bs. Although they look nearly the same as the 1981 machines, they have a new body surrounding the 1.5-liter twin turbocharged 540-HP engine. Premiere of the Renault Formula One team in the U. S. will be at Long Beach, Calif., in April, shortly after introduction here of Renault's first production turbo, the Fuego.

Chrysler report card is less than glowing

WASHINGTON.—In the most recent report to Congress made by the Chrysler Loan Guarantee Board — unfortunately covering only the first nine months of 1981 — the board continues to stress "there is no guarantee of the company's success."

If Chrysler is to "remain viable," it adds, "steadily improving performance of actual market conditions must occur."

Moreover, even though the first nine months of 1981 are better than earlier years, "further progress may prove difficult," it said.

Although this fails to take into account several major actions taken by Chrysler since September and although it stops short of saying the company is not viable — a statement that would have the effect of eliminating any possibility of the last $300 million in federal loan guarantees — it is not a rosy picture.

Meanwhile, the board is analyzing Chrysler's new four-year plan and looking for a "reasonable prospect" of Chrysler's continuation with no more than the $1.5 billion of federal help through 1983 and its continued viability after that without further federal assistance.

The last drawdown was for $400 million and at that time, the board made its finding of viability required by the law.

Since then, Chrysler Chairman Lee Iacocca has sworn he will do everything possible rather than face the bad publicity and a possible slowdown in sales attendant with applying for the last $300 million in federal loan guarantees.

Conceivably, Iacocca is also leery of forcing the board to make once again a finding of "viability" — which becomes increasingly hard during a period of falling sales.

Moreover, the real spadework for the last drawdown was made during the Carter Administration — Jan. 19 — just one day before the swearing-in of President Reagan, whose Administration is philisophically opposed to "bailout" or any interference with market operations.

• The only retained member of the Chrysler board is Federal Reserve Chairman Paul Volcker. The new Treasury secretary is Donald Regan and the new comptroller is Charles A. Bowsher. Ex-officio members are Transportation Secretary Drew Lewis and Labor Secretary Raymond Donovan.

Since that last drawdown, the board has been exercising its authority to review asset sales in excess of $5 million and even any contract by the company in excess of $10 million.

But each time, the board has found the government's interest (chance of collecting) not endangered and the company's ability to survive not adversely affected.

It also notes in passing that the profit-sharing plan worked out in connection with the last drawdown is expected to be discussed during the coming September negotiations with the UAW to see if it should be extended beyond 1983.

The board also revealed it had allowed Chrysler to create a new subsidiary, Automotive Financial Services, as a bank of initial deposit for the company's cash draft collection system. This was needed because the

New Chevy boss has fine track record

23 years of high marks for Stempel

Robert C. Stempel is a big man (6-feet-4, 225 pounds) who has made a big — and a very favorable — impression everywhere he's been in his 23-year career with General Motors.

And he's been quite a few places. Oldsmobile, where he rose to assistant chief engineer. Assistant to the GM president. Chevrolet, where he became director of engineering. Pontiac, where he was general manager from 1978 to 1980. Opel in Germany, where he was managing director from 1980 until last week.

Now he's returning to Chevrolet as general manager.

Stempel is described as an "engineer's engineer" by many who have worked with him. Other terms that dot their evaluation are "an excellent communicator," "good-natured," "a great sense of humor," "everything he does, he does well."

And another accolade that is highly prized in Detroit: "He's a real *car* man."

Stempel joined Oldsmobile in 1958 and spent 15 years there. He held a number of engineering positions with that division and along the way became an expert on front-wheel drive — not a bad qualification to have these days.

An early associate gives him the credit for "figuring out the front-end steering geometry" of the Olds Toronado, which was the first of the current generation of domestic front-drive cars. Toronado debuted as a 1966 model.

Stempel's abilities were recognized by GM President Edward N. Cole who appointed Stempel assistant to the president in 1973. One of his assignments was acting as liaison man inside and outside GM on the catalytic converter.

GM had made a commitment to go across the board on the catalytic converter for 1975 models. Stempel was the expediter between the president's office and the divisions that were working on it. He also participated in numerous briefings on the device throughout the U. S. with the media and with government personnel.

He's remembered as a first-rate communicator, a man who could put the catalytic converter technology in layman's terms and make it understandable.

Stempel's next stop was Chevrolet engineering in October, 1974, and a year later he became director of engineering for that

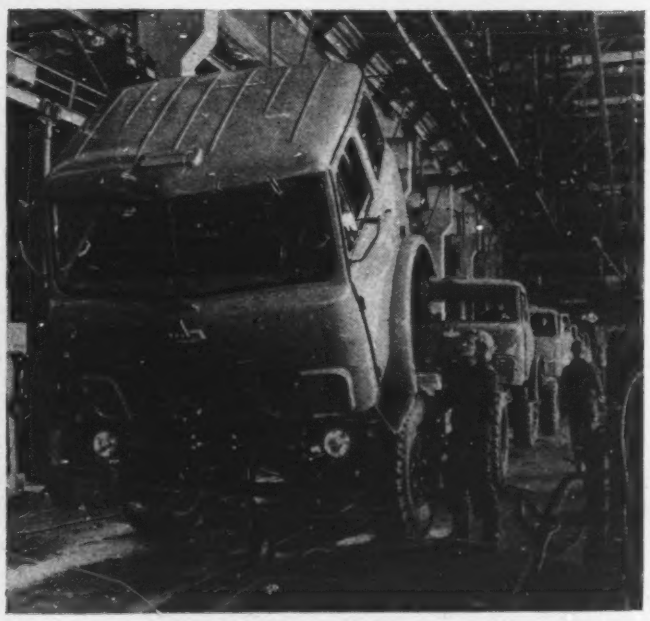
Ivan keeps on truckin'

Rolling down the assembly line at Soviet Union's Zil auto plant in Moscow, these trucks appear somewhat dated. Note the wraparound windshields.

Checking out Ladas quality

Workers at end of assembly line at Soviet Union's Togliatti auto plant check fit and finish on newly assembled Zhiguli (Lada) cars.



Coming down the line

Trucks inch down the assembly line at the Soviet Union's Kamaz Auto Plant, the newest truck factory in the nation.

Production rises; exports grow; new models due

Soviet auto industry moves ahead

By Lev Shugurov
Special to Automotive News

MOSCOW.—The Soviet Union has a developed automobile industry.

It is the world's leading bus manufacturer, the world's third-largest and Europe's biggest truck builder. It holds the sixth place in the world in output of passenger cars.

The Soviet automobile industry manufactures motor vehicles of over 300 models and modifications enabling this country to export more than 300,000 automobiles annually.

In the next few years the Soviet automobile industry will be further developed. Three factories will start manufacturing front-drive cars and a sharp increase is expected in the output of special-purpose vehicles, namely, refrigerator vans and dump trucks for open pits and farming.

Many new diesel and gas-powered trucks and buses will be made and a broader use will be made of aluminum to cut their weight.

In the next five years serial production will start of electric-powered cars, mostly wagon-type, and the Volga cars with pre-chamber combustion. This is going to reduce the consumption of conventional oil fuels and add to environmental protection efforts.

• The first Russian gasoline-burning car was built in 1896 by Yevgeni Yakovlev and Pyotr Freze. Weighing 300 kilograms and having a 2-HP engine, the car did not make a great success.

In the years prior to 1914, when domestic automobile production was stopped altogether, plants of Russo-Balt, Lessner, Puzyrev, Leitner, Freze, Duks and others put out not more than one thousand motor vehicles. Production of automobiles in this country was resumed only in 1917, after the October revolution.

Russia's automobile industry was pushed forward in the early '30s, when two modern works, ZIL and GAZ, were built in Moscow and Gorki with the aid of the American Ford Motor Co.

At the dawn of Soviet automobile-making, trucks made up the bulk of its output. Their share, however, was steadily declining from 92 percent in 1940 to 36 percent in 1980.

The 1970s-80s saw a sharp rise in the manufacture of passenger cars. To gain time the Soviet Union used the experience of Fiat and Renault, which assisted in the building and redevelopment of the three major car works, AZLK in Moscow, VAZ in Togliatti and IZh in Izhevsk.

The expected result was reached soon—today the private car fleet numbers eight million.

• Out of 1,327,000 cars manufactured in 1980, 328,900 were exported and the remainder sold to private owners and state organizations.

According to the Central Statistical Board, 1,107,000 new and used passenger cars were sold to private owners in 1980, as against 123,000 in 1970. Parallel with the growing scope of production, the assortment of passenger cars, now manufactured by eight works, was growing, too.

Geography of the Soviet Union—large distances between cities and difficulties in a fast development of a network of roads and servicing stations—is the cause of enhanced demands to the automobile design.

Soviet automobiles have a body stronger than their European counterparts, greater service intervals (normally 10,000 kilometers), are less demanding to lubricants and other service materials, and have a higher clearance (of at least 170 millimeters).

For these reasons the four-wheel drive UAZ, Niva and LUAZ are in high demand in this country, especially in rural areas.

The country's climate, too, lays its claims to the design of Soviet automobiles. All passenger cars are fitted out with heaters and easy-starting devices for winter. Trucks are manufac-

Lada 2105, a new model from Togliatti.

The Soviet system

The auto industry — like everything in the Soviet Union—is built to a giant scale. Auto plants are huge (or, as in the case of Togliatti, gigantic) and so is the Moscow service center.

Also built to oversize scale are some of the Belaz trucks. Most of the passenger cars, although they seem somewhat dated in appearance, are designed to cope with the brutal weather and tough road conditions in the Soviet Union.

The Soviet Union ranks sixth in the world in output of cars, third in trucks and first in buses. The first gasoline car in Russia was built in 1896, but real volume production did not get under way until recent years.

New model of the Volga, produced in Gorky.

Production rises; exports grow; new models due

Soviet auto industry moves ahead

Continued from Page 4

tured aso in the "Arctic version" for the extreme North and the "tropical version" for Central Asia.

Here are some design specifications of the Soviet passenger cars now in serial production:

Aluminum crankcase (Moskvich, IZh, Volga, and Chaika); balance shaft (in Zaporozhets and LUAZ); full-flow oil filter (in Zhiguli and Moskvich); hydraulic lifters (in ZIL and Chaika); pre-chamber combustion (in Volga-3102); air-cooling (in Zaporozhets and LUAZ); automatic transmission (in ZIL and Chaika); permanent four-wheel drive (in Niva); interaxle differential (in Niva); disc brakes (in ZIL, Chaika, Moskvich, and Zhiguli); independent suspension of all wheels (in Zaporozhets and LUAZ), and hydraulic light beam corrector (in Zhiguli-2107).

In the late '50s, every Soviet automobile plant began putting out vehicles of a definite design so as to rationalize automobile manufacture. A number of factories specialized in the manufacture of buses and trolley buses, while others only in dumpers or other vehicles.

Standing apart among the buses are the special four-wheel drive models PAZ-3201 and UAZ-452 for the rural areas and the LAZ intercity coaches with independent front-wheel suspension. Pneumatic suspension is used in the big LIAZ buses and the ZIU trolley-buses for cities.

A few words about the TOARZ car factory in Tallinn: Every year it turns out 50 racing cars. The last model, Estonia-20 of the Vostok formula, has a wedge-shaped body of fiberglass, side radiators and magnesium-alloy wheels.

• For decades the Soviet automobile industry relied mostly on domestic supplies of sets of equipment, semi-finished products and primary materials. It depends on foreign partners neither in metallurgy, nor the manufacture of machine-tools or ballbearings.

However, over the last few years cooperation with factories abroad began to expand. Thus, shock absorbers, storage batteries, ignition switches, headlights, brakes, and a number of other things now arrive from Bulgaria, Hungary, East Germany, Poland, Czechoslovakia and Yugoslavia.

In turn, the Soviet Union sells to these countries ready-made cars and chassis and parts such as wheels, shock-absorbers and front axles.

Exports of Soviet motor vehicles grows, too, with passenger cars making an appreciable part of them.

The bulk of the Soviet imports is made up of the Hungarian buses Ikarus, Czechoslovak refrigerator trailers Skoda, and IFA dumpers from East Germany.

The Soviet Union also purchases numbers of the West German Magirus-Deutz and Czechoslovak Tatra trucks, Polish Nysa microbuses and wagon cars, Canadian Lectra Howl and Japanese Komatsu dumpers for open-pit mining.

Only recently the USSA began importing the Czechoslovak Avia wagon and refrigerator trucks.

Designed for the Soviet boondocks

This four-wheel-drive LUAZ Volyn is popular in remote and rural regions of the Soviet Union. It uses a four-cylinder, 35-horsepower engine.

pay and the Cartermen sent him $5,800 last year to shore him up, with which he purchased a vintage Corvette which he "shows" all summer while I work each day at the dealership where I'm a commissioned salesman of 30 years' tenure.

This summer vacation program is so commonplace to his kids they think it's part of their normal vacation time and are quite surprised when the neighbors go to work all summer.

Now, Mr. Westfall, if this is your typical UAW auto worker, I sure envy them and their lifestyle. He's ruined my business, will probably ruin the entire industry and may end up ruining the nation. These people admit they would rather stay home than work, and why not?

"Job Security" should include *earning* what you get, paying your way and filling a need. Michigan is over $1 billion in debt to the federal government for unemployment, our cars are priced beyond all but the automotive worker pay scale and our government is floundering in massive debt, part of which is the gift of TRA for auto workers.

When we return to a "dollar paid for a dollar earned" rather than "how much can I get for how little can I do," then we will be approaching affordable "job security."

Meanwhile, our UAW "prima donnas" are in for some surprises or I miss my guess. The companies are as guilty as the unions in expecting this "blood out of a turnip" economic philosophy to support them. Weak company negotiators over the past 20 years have done much to get us where we are.

It is inconceivable to me that the auto dealer has any idea of the extent to which the auto worker has been subsidized in this business. The salesman reports to work six days a week and gets paid for what he does and only for what he does. Where do the dealer and salesman figure in the TRA plan? Who cares, for that matter?

Further argument is not necessary. The economics of the thing will dictate, yes, are dictating the answer.—**Kenneth C. Floria,** Smith & Doster, Inc. (Ford), Delton, Mich.

Bringing buyers back

Read your editorial about "Get 'em in the tent" (Dec. 21), and it was right on target.

For quite a few years, we in the automobile business have necessarily been so intent on producing cars with low pollution and high mileage characteristics that we have relegated automobiles to a mundane "utility" category.

Before that, customers bought new cars not only because they needed them, but because they *wanted* them. Customers were pleased with the improvements and conveniences that were *apparent*, and were particularly attracted by the fresh styling of new cars. The new cars were exciting; customers wanted them.

Now, having relegated the automobile to a utility item like a furnace, a vacuum cleaner or a washer, people are buying them on a need basis. And, of course, the American automobiles can go much farther than most customers or critics ever realized.

All this brings me to another point. How can the American automobile, which has been so downgraded in the customer's perception of quality, run over 100,000 miles?

Some people, somewhere, were wrong in their criticism of the American automobile. It has proven, in use, to be a much better car than the critics had anticipated. Is it possible our severest critics were wrong in condemning the quality of the American cars?

The American public's perception of the American automobile should be upgraded, and will be if the facts are brought out. But if our critics keep on complaining about the quality of the American car, and there is no rebuttal, eventually customers accept the criticism as fact.

"Slow traffic" in domestic car salesrooms is one of the inevitable results of this criticism (as we are now witnessing). Of course, there are other reasons why customers aren't eagerly buying new American cars, but certainly the above stated reasons are an important part of the problem.

Let's get 'em in the tent!—**James V. Mancuso,** chairman, Mancuso Chevrolet, Skokie, Ill.

'Quite simple'

May I respectfully suggest that the solution to Detroit's key problem is really quite simple. The UAW hourly pay at auto industry supplier companies is about $7/hr., whereas the same person doing essentially the same work at the auto makers gets about $12.50/hr.

So . . . let the auto makers sell the cars and have them made by suppliers. — **Midwest Reader.**

Opel launches Family 2 diesel Kadett

BRUSSELS.—General Motors' Opel launched the diesel version of its Family 2 four-cylinder gasoline engine at the auto show here in January.

The 1.6-liter, 54-horsepower engine will go into the hatchback Kadett—where it will give Opel some clout against the diesel Golf (Rabbit)—and into the new Ascona.

The engine, made at Kaiserslautern in West Germany, is said to have very good torque, and to return excellent fuel economy.

It forms part of an expansion of Family 2 derivatives. At the Geneva Auto Show in March Opel will unveil a fuel-injected, 1.8-liter version.

While this will go into the front-drive Kadett and Ascona, its first application will be in the front-engine, rear-drive Manta coupe.

Vital to public transportation

With few privately owned automobiles in the Soviet Union, buses are considered the way to go. As a result, the country ranks first in the world in bus production.

People who need *Engineers* use Automotive News' SAE Classifieds!

AUTOMOTIVE DEVELOPMENT ENGINEER
Manufacturing Engineer
ENGINEERING EXECUTIVE
Rapidly growing automotive parts producer has a challenging position to manage and direct the company's engineering activity. Position requires close liaison with Japanese corporate associates.

State capitol roundup

More states mull higher gas tax

By Mary G. Jones
Special Correspondent

This year, Georgia will reconsider a 1981 bill to increase its motor fuel tax from 7½ to 9½ cents. Bills to increase the state tax on gasoline and diesel fuel are expected to be considered in at least nine other states.

Other legislative methods of raising motor fuel tax revenues such as imposition of a sales tax on motor fuel, levying of local gasoline or sales taxes or changing the taxing mechanism to a variable method of taxation are also highly likely to be considered in many states.

In 1981, 27 states considered bills to increase their state's tax on gasoline and diesel fuel. Sixteen states and the District of Columbia actually approved these measures.

Legislative increases were approved in California, Colorado, Delaware, District of Columbia, Idaho, Iowa, Minnesota, Nevada, New Hampshire, North Carolina, South Carolina, South Dakota, Tennessee, Utah, Vermont and Wisconsin.

All of these increases, except in California became effective during the 1981 calendar year. The California increase from 7 to 9 cents per gallon is scheduled to become effective Jan. 1, 1983.

• Two of these states increased their tax by one cent per gallon; nine states and the District of Columbia by 2 cents; three states by 3 cents; and two states by 4 or 4½ cents per gallon.

STATE FUEL TAXES
(Gasoline, as of 1-1-82)

48. Washington	12
49. W. Virginia	10.5
50. Wisconsin	13
51. Wyoming	8

Delaware, Hawaii, Illinois, Michigan, Vermont and Washington will also reconsider bills in 1982 which adopt a variable method of taxation.

This method ties the tax imposed on motor fuel to the wholesale price or the average statewide retail price of fuel. Therefore, the amount of tax will automatically increase as the price of motor fuel increases.

The laws generally limit the amount the tax can be increased during a specified period, by providing maximum and minimum statutory limits. The rates are usually recalculated quarterly or semi-annually.

There are now eight states which impose a variable fuel tax. This is a relatively new concept in motor fuel taxation as the first variable fuel tax was enacted in Washington in 1977.

This was followed by New Mexico in 1979; Indiana, Kentucky, Massachusetts and Nebraska in 1980, and Ohio and Rhode Island in 1981.

The Ohio variable method of calculating tax is slightly different. The tax there is based on a formula which uses highway maintenance costs and fuel consumption patterns as factors.

• All states with variable fuel taxes increased their tax during the first part of 1981. During the last quarter of 1981, however, Kentucky and Massachusetts actually slightly decreased their tax by a portion of one cent.

In the first period of 1982, Kentucky, Massachusetts and Washington again decreased their gasoline tax. In Nebraska and Rhode Island, the 1982 tax will remain the same as it was for the last six months of 1981.

The number of states increasing their motor fuel tax has increased steadily in recent years. In 1978, only four states increased their tax; in 1979, 10 states; and in 1980, 11 states. In 1981, 25 states and the District of Columbia increased their motor fuel tax either legislatively or administratively.

The highest gasoline taxes are centered in the North Central states. The state levying the highest tax on gasoline is Nebraska at 13.9 cents. Five other states and the District of Columbia levy a tax of 13 cents per gallon.

Texas has the lowest gas tax rate at five cents followed by Oklahoma at 6.58 cents per gallon. Included elsewhere on this page is a chart which shows the state gasoline taxes of Jan. 1, 1982.

• Currently, eight states and the District of Columbia impose a sales tax on the sale of gasoline and motor fuel. These states are California, Georgia, Hawaii, Illinois, Indiana, Michigan, Mississippi and New York.

In 1982, measures will be considered in Minnesota, Ohio and Rhode Island to impose a sales tax on the sale of motor fuel. New York bills are also pending to exempt the sale of motor fuel from the state sales tax.

Bills pending in Hawaii and New York would reduce the amount of sales tax levied on the sale of motor fuel.

State highway funds are in double jeopardy. There has been a tremendous increase in construction and maintenance costs due to the effect of inflation on both materials and labor. Therefore, most states are only able to perform minimal maintenance on their roads. Few states plan new road construction projects.

The Federal Highway Administration rates less than one-third of all major roads and streets in the United States in the "good" category for pavement conditions. Sixty percent are rated "fair" and 10 percent are rated "poor." This represents a decrease of 5 percentage points in the "good" category from 1975 to 1978.

• Road fund balances have been lower in recent years as people drive more fuel-efficient vehicles and cut their fuel consumption and the total gasoline revenues fall.

According to statistics compiled by the Federal Highway Administration, the average vehicle's annual fuel usage dropped from 830 gallons in 1970 to 735 gallons in 1980. This represents a decrease of 11 percent.

Other Federal Highway Administration figures show that state tax revenues raised from motor fuel taxes decreased by $400 million from 1979 to 1980.

Two Datsun decades

Jack Heinrich, right, Heinrich Motors, Hillsboro, Ore., is presented with a plaque marking his 20 years as a Datsun dealer. Making the award is Bob Chase, Portland assistant regional sales manager for Nissan.

BODY SIDE MOLDING TAPE

GORILLA Tape™ cuts installation time in half and at the same time acts as a water tight gasket around rivet holes.
A super tack "ACRYLIC" adhesive allows installation in almost any temperature.
Stocking sizes are 1/2" X 1/32" X 72 yds. (24 rolls per case), 1" X 1/32" X 72 yds. (12 rolls per case).

But truck registrations decline 9.7 pct.

Car sales steady in Japan in '81

TOKYO. — Truck sales in Japan in 1981 declined for the second consecutive year, but car sales held steady and sales of midget cars — those powered by engines of less than 550cc— increased for the second straight year.

Vehicle sales — excluding the midgets — stood at 3,897,200 units, off 2.6 percent from the 1980 total, the Japan Economic Journal reported.

That was broken down into 2,701,156 car sales, up 0.8 of a percent from 1980; 1,173,147 trucks, down 9.7 percent, and 22,897 buses, down 2.1 percent.

The midget-car total was estimated at 1,229,821 units, up 21.4 percent from a year earlier and the second highest total ever. The best sales year for the midgets was in 1970, when sales totaled 1,255,913.

The financial newspaper reported that Honda was the only maker of full-size vehicles to show an increase in registrations for 1981. Its total of 192,646 cars and trucks was a 12.7-percent increase over 1980.

Registrations of other full-size units were reported as follows: Toyota, 1,492,699, down 0.1 percent; Nissan, 1,134,347, down 2.8 percent; Mitsubishi, 327,542, down 10.8 percent; Toyo Kogyo, 334,274, down 0.8 percent; Isuzu, 189,475, down 2.8 percent; Daihatsu, 71,546, down 22.4 percent; Fuji Heavy Industries, 56,555, down 7.3 percent; Hino Motors, 38,922, down 17.5 percent; Nissan Diesel Motor, 20,905, down 18.6 percent, and Suzuki, 179, down 52.3 percent.

Imported-car registrations were also down for the year, to 38,110 units, a 15.1 percent decline.

The story was reversed for the midgets: Only one of six major makers lost ground in '81. That was Toyo Kogyo, whose registration total of 51,650 units was off 6.1 percent.

Major makers who increased their midget-car registrations in 1981 were Honda, 141,793, up 41.7 percent; Fuji Heavy Industries, 173,685, up 33.4 percent; Daihatsu, 242,160, up 23.0 percent; Mitsubishi, 187,781, up 17.3 percent, and Suzuki, 432,721, up 16.1 percent.

Specht takes sales post at General Warranty

MVMA distributes specs booklets for crash studies

DETROIT. — The MVMA has begun distributing to accident investigators the 1981 edition of a specifications booklet.

The new edition provides 21 specifications on 1972 through 1981 domestic and foreign passenger cars. With the book, accident investigators prepare detailed accident reports that are used by MVMA researchers to learn about the performance of vehicles in traffic accidents.

More than 400 copies of the new edition, prepared with the cooperation of Automotive News, are going to investigators at DOT, the Motor Carrier Safety Bureau, NHTSA, the Canadian Ministry of Transport and private laboratory and university research groups.

MVMA has been distributing the specifications booklet for five years.

MVMA has worked with government agencies in accident investigation since 1958 to correlate accidents with impact testing and computer modeling.

Imports dip in January, but grab 31 pct. of market

Domestic sales lowest since 1954

By Jenny L. King
Staff Writer

The new-car sales recession deepened the first month of 1982, with domestics plunging to their lowest level since 1954 and imports, though down in numbers, claiming a record 31.08 percent of the market.

U. S. auto makers retailed 368,138 new cars in January, down 21.64 percent from the year-ago 469,832 and worst for the month since 355,437 back in 1954.

Import sales totaled 166,172, down 6.33 percent from 177,395 last year.

Combined sales reached 534,310 units, down 17.45 percent from 647,227 in January of 1981.

The domestic selling rate averaged 14,726 last month, based on 25 selling days. That was down 18.51 percent from 18,070 for 26 days a year ago.

General Motors sales numbered 222,544, down 24.10 percent from 293,219 in 1981 (down 21.06 percent daily rate). Ford Motor Co. reported sales of 88,806, down 9.35 percent from 97,969 (down 5.73 percent daily rate). Chrysler Corp. sales of 45,290 were down 18.33 percent from 55,452 (down 15.04 percent daily rate).

American Motors sales totaled 6,173, down 42.41 percent from 10,719 last year (down 40.11 percent daily rate), and Volkswagen of America plunged 57.31 percent, to 5,325 from 12,473 (down 55.57 percent daily rate).

GM earned 60.45 percent of the domestic market, down from 62.41 percent a year ago. Ford sales accounted for 24.12 percent, up from 20.85 percent. Chrysler climbed to 12.30 percent from 11.81 percent. AMC stood at 1.68 percent, down from 2.28 percent, and VWoA cornered 1.45 percent, down from 2.65 percent.

Only two U. S. makes, Chrysler and Lincoln, were up during the month. Chrysler edged ahead 8.89 percent and Lincoln pushed up 28.69 percent.

Fifteen imports were up in January. Volvo, Peugeot and Jaguar reported record sales. Top-selling Toyota was down 19.17 percent; Datsun was down 1.76 percent; Honda was up 9.92 percent; Subaru was up 1.39 percent, and Mazda was down 23.10 percent.

Imports claimed 31.03 percent of the month's market, up dramatically from 27.41 percent a year ago.

Third-period domestic sales were down 32.59 percent, to 137,472 from 203,948 in 1981. The daily selling rate was 15,275 (for nine days), down 25.10 percent from 20,395 (for 10 days).

UAW to seek reopener, labor content from Ford

Continued from Page 1

Ephlin, who is also director of the union's Ford department, said keeping Sheffield open will be part of the talks with Ford.

• The proposal also calls for the elimination of all paid personal holidays. There are eight scheduled for calendar 1982.

There are also reductions in relief time and phased-in benefits based on seniority. The proposal says workers should not reach full wage and benefit levels until they have five years seniority.

According to the Detroit News, the proposal also asks for a 15-month freeze on cost-of-living allowances (COLA) at the current $2.03 level. No COLA increases would be paid until June, 1983, according to Peter J. Pestillo, Ford vice president-labor relations.

The News also said paid vacation time would be reduced by one week and premium pay and COLA would not be paid for days off, such as holidays and vacations. White-collar workers at Ford already have had similar reductions.

There are no proposed reductions in pension benefits.

"It's a start," Ford's Pestillo said when questioned about the proposed contract. "We're realistic. We don't think we can come all the way back immediately."

Although parts of the new agreement would be costly for Ford, company officials say they could break new ground for more cooperation between union and management.

Ephlin said the income guarantee proposal is "interesting" to the union, but he indicated a freeze on COLA is "less appealing." He said the union might like to see the guaranteed income made available to workers with 10 years' seniority, instead of 15.

Both Pestillo and Ephlin said they hope to conclude negotiations quickly but had not set a deadline at press time. Pestillo said talks would not go on for more than two weeks.

Chrysler, UAW agree on pension-fund payments

DETROIT. — Chrysler Corp. and the UAW have reached an agreement on Chrysler pension fund payments for the 1980 calendar year.

Payments of the 1980 obligation, estimated at $187 million, will be made in April, 1982; September, 1983, and September, 1984. Chrysler agreed to begin early payments on a monthly basis on the 1981 calendar-year UAW pension fund contribution of an estimated $187 million, due Sept. 15, 1982.

Isuzu to establish Central Region for truck deals

LOS ANGELES. — American Isuzu Motors announced it will open a third regional office, this one in the Chicago area.

Its jurisdiction will be called the Central Region and will consist of 11 Midwest states. The new region will have truck-only dealers at this time Although a parts warehouse will be established in the region eventually, there will be none initially, the company said.

The Central Region includes Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota and Wisconsin.

Final site for the new office has not been selected. Temporary offices are at 1900 East Golf Road, M-100, Schaumburg, Ill. 60195. The phone number is (312) 843-7230.

The Central Region will be under the management of Jerrald G. O'Connor, who has been promoted from his position as dealer development manager. Douglas Sprague has been appointed regional sales manager, and David Corker will be regional parts and service manager.

Caldwell thanks UAW negotiators

DEARBORN.—Ford Chairman Philip Caldwell attended a main-table bargaining session last week to thank UAW negotiators for beginning contract talks early and for considering the Ford contract proposal despite the failure to reach an agreement at General Motors.

He also made it clear he will have very little to do with current bargaining. Caldwell left last week for a 3½-week tour of Ford Asia-Pacific operations.

Peter J. Pestillo, Ford vice president, labor relations, said Caldwell's trip "will not bear upon our ability to reach a decision."

EPA hears complaints on diesel exhaust proposal

Makers blast emissions averaging

By Roger Rowand
Engineering Editor

ANN ARBOR, Mich. — Manufacturers have had their first shot at telling the EPA what they think of that agency's proposal for 1985 to average light diesel particulate pollution among engine families.

They don't like it.

Averaging among light-duty diesels was offered by the EPA. It would be an alternative to rules calling for compliance to a standard by each vehicle configuration separately.

Besides particulate averaging in general, makers don't like the proposed standard of 0.2 grams per mile for cars and 0.26 gpm for light trucks. All say they can't meet it.

gine particulate standard is 0.6 gpm.

Manufacturers and others made their contentions in a highly repetitious, day-long session of testimony at the agency's laboratory here. They testified orally and in writing that there is no technology available — with or without averaging — to allow their vehicles to meet the standard, and there won't be for years to come.

The 1982 light duty diesel engine particulate standard is 0.6 gpm.

Organizations trying to make a case against averaging particulates now included Chrysler Corp., Mercedes-Benz of North America, Peugeot S.A., Volvo of America Corp., BMW, Ford Motor Co. and Garrett Corp. The California Air Resources Board (CARB), by letter, also took a swing at particulate averaging.

The Manufacturers of Emission Controls Assn. supported the standard and, with caveats, the averaging plan.

General Motors and Volkswagen of America said they like averaging — with reservations. Those two companies last year suggested the concept to EPA.

Others agreed on the concept but said gasoline engine particulates should be included or other modifications made. They said averaging helps large companies to the disadvantage of smaller companies.

GM suggested expressing particulates standards as a function of vehicle weight which it said has a strong influence on particulates.

As did all the others, GM said it could not meet a 0.2 gpm standard.

Manufacturers agreed particulate trap-oxidizers under development are far from production.

Mercedes-Benz, for example, said its most promising trap oxidizer has: Continuing backpressure problems, decreased fuel economy and engine performance, negative driveability and reduced engine durability.

The notice of proposed rule making hearing here is being followed by a 30-day comment period.

January truck production lowest for month since '63

U. S. truck production for January was the lowest for the month in 19 years, and the total dropped 11.84 percent below the comparable 1981 period.

Last month, the truck manufacturers completed 127,201 units, down from 144,284 last year. It was the lowest total for the month since 1963 when only 123,424 trucks were assembled.

Last week's truck production was targeted at 26,881 units, down 32.95 percent from 40,088 the previous week and down 14.36 percent from 31,396 in the comparable 1981 week.

General Motors' Lordstown (van) facility was idle last week for inventory control.

Also down due to high inventories were Ford's Lorain, Norfolk, Twin Cities, and San Jose plants, and American Motors' Toledo (Jeep) facility.

The AMC Toledo point is scheduled to resume operations today (Feb. 8) with daily production reduced from 395 units on one shift to 350 units, also on one shift.

Downtime is slated next week (Feb. 15) for International Harvester's Ft. Wayne facility.

In January slump

Car output at 35-year low

Continued from Page 1

over. Down for inventory reasons were:

General Motors — Arlington, Flint, Framingham, Lakewood, Linden, Lordstown, South Gate, Tarrytown, and Wilmington points. Chrysler Corp. — Belvidere, Jefferson and St. Louis. Ford Motor—Atlanta, Dearborn, Kansas City, Lorain, San Jose and Wayne. American Motors—Kenosha.

Still down for model changeover were GM's Janesville and Oklahoma City points.

Downtime is slated this week at seven GM and two Chrysler facilities. They are GM Framingham, Janesville, Lakewood, Lordstown, Oklahoma City, South Gate and Wilmington and Chrysler Belvidere and Jefferson.

AMC's Kenosha plant resumed operations today (Feb. 8) with production reduced from 510 units a day on one shift, to 310 units a day.

Production shares for last week by company are: GM, 75.49 percent; Ford, 11.89 percent; Chrysler, 6.50 percent; Volkswagen of America, 5.95 percent; and Checker Motors, 0.17 percent.

Jan. auto output climbs in Canada; truck build falls

Canadian auto production for January was considerably ahead of the comparable 1981 period, but the truck manufacturers finished the month with the lowest output in seven years.

During the first four weeks of production this year, the auto makers completed 51,920 units, a 10.59 percent gain from 46,423 built in January last year, but less than the 65,780 built in January, 1980.

The truck makers finished 30,171 units last month, down 30.83 percent from 43,620 in January, 1981, and the lowest January output since 28,767 units were assembled in 1975. The total was the lowest for any month since 26,422 units were completed in August, 1980.

Auto production last week was slated at 12,413 units, down 40.40 percent from 20,827 in the previous week, and 25.26 percent below 16,609 in the comparable 1981 week, due to downtime at all Ford Motor car facilities. Last week's poor showing cut into the year-to-date gain made by the auto manufacturers in January. So far in 1982, the auto manufacturers have assembled 64,333 units, a gain of only 2.06 percent from 63,032 in the comparable 1981 period.

The truck makers targeted output last week at 4,647 units, down 48.72 percent from 9,062 the previous week, and a 43.63 percent decline from 8,244 in the same week last year.

All of Ford's car and truck facilities were idle last week (Feb. 1) for inventory control.

Also down last week were General Motors' Oshawa (No. One) car point, and GM's Oshawa truck and Scarborough van facilities.

The GM St. Therese point dropped one of two shifts last week, but kept output at the same 45-units-an-hour rate.

Bird watching

Spotted: 1983 Ford Thunderbird

Unofficial photos of 1983 Ford Thunderbird show car's unique new styling and slotted wheels. Styling is quite similar to Ford Motor's Continental Concept 90 show car. Sources say the new T-Bird will ride on a 104-inch wheelbase. Powertrain will be a 2.3-liter four-cylinder engine with five-speed overdrive transmission. A three-speed automatic and V-6 and V-8 engines will be optional. Story, other pictures on Pages 8 and 66.

1.4 million units; 97-day supply

Car stockpile dips a bit

By Richard A. Wright
Assistant Managing Editor

U. S. auto makers trimmed the inventory of unsold new cars during January — mainly through assembly-line shutdowns—but the continuing anemic sales pace resulted in only a minor easing of the burdensome stockpile.

The industry had a 97-day supply of new cars Feb. 1, down from 107 days on Jan. 1—the highest for any month opener in history—but still the heaviest stockpile ever for a Feb. 1. A year ago, the Feb. 1 stockpile was good for 78½ days. The previous high for Feb. 1 was 92 days in 1975.

The domestic new-car inventory totaled 1,431,983 on Feb. 1, down from 1,471,053 a month earlier. A year ago, the industry had 1,421,023 on Feb. 1.

Supplies of subcompacts and intermediates were the heaviest Feb. 1, while standards and luxury cars were in shortest—but not short—supply.

All of the corporate makers cut their unit counts during January, and all but Volkswagen of America and American Motors also sliced their days-supply figures.

General Motors trimmed its inventory to a 98-day supply, down from 107 days a month earlier. Supply figures were extremely high a month earlier for the new A-body cars, not unusual for newly introduced models, but they remained very high Feb. 1. J-cars also continued in very heavy supply.

Ford Motor Co. posted the biggest inventory slash, cutting its stockpile to an 87-day supply from 113 days on Jan. 1. None of Ford's lines were short, but the supply of Escorts was cut in half from 140 to 70 days — mainly because sales were almost doubled.

Chrysler Corp. opened February with a 103-day supply, off slightly from 104 days a month earlier. Stocks in all lines were more than adequate.

VWoA saw its inventory of U. S.-built Rabbits leap from an 83-day supply Jan. 1 to 165 days Feb. 1, while AMC opened

Table on Page 66.

February with a 112-day supply, up from 97 days a month earlier.

The Feb. 1 domestic inventory was divided this way: GM, 61.20 percent; Ford Motor Co., 21.44 percent; Chrysler Corp., 12.98 percent; VWoA, 2.45 percent, and AMC, 1.93 percent.

A month earlier, the domestic inventory was divided as follows: GM, 61.13 percent; Ford Motor Co., 21.41 percent; Chrysler Corp., 13.09 percent; VWoA, 2.40 percent, and AMC, 1.97 percent.

• By size class, the industry had a heavy 120-day supply of subcompacts, but this was in fact an improvement over the 149-day stockpile on hand Jan. 1.

The 92-day supply of compacts was also down from 106½ days a month earlier, while intermediates were up to a 127-day stock from 120½ days on Jan. 1.

Standards were up slightly to 72½ days from 66 days, but continued to be leanest among the size segments. The industry had a 77-day supply of luxury cars, off a bit from 81 days a month earlier.

The Feb. 1 inventory was divided this way by size segments: Subcompact, 29.53 percent; compact, 23.47 percent; intermediate, 30.23 percent; standard, 10.73 percent, and luxury, 6.04 percent.

A month earlier, the inventory was divided as follows: Subcompact, 30.45 percent; compact, 23.81 percent; intermediate, 29.54 percent; standard, 10.69 percent, and luxury, 5.51 percent.

• The Feb. 1 days-supply figures by market segment were:

Subcompact — Escort, 70; Eagle SX/4, 85; Lynx, 93; Chevette, 97; Omni, 119; 024, 120; Horizon, 124½; TC3, 127; T1000, 140½; Spirit, 151; Rabbit, 165; LN7, 179½; EXP, 194; J2000, 259, and Cavalier, 266.

Compact—Firebird, 50; Zephyr, 59; Eagle, 74; Camaro, 76; Omega, 81½; Fairmont, 82; Citation, 85; Aries, 87; Reliant, 94; Skylark, 99; Phoenix, 112½;

Company, dealers seek OK in Louisiana

GM rebates run into Texas twister

By Joseph Bohn
Marketing Editor

General Motors challenged a Texas law prohibiting dealer-subsidized factory rebates and was slapped with a temporary restraining order last week.

The restraining order basically said that GM (1) couldn't refuse to pay the rebates, (2) couldn't charge back part of its costs to dealers, and (3) couldn't modify or terminate its program in Texas.

At presstime, hearings were being held in a state district court on whether to make the injunction permanent. GM might end up paying $2,000 for every violation of the Texas Consumer Protection Act and $1,000 for every transgression of the Texas Motor Vehicle Commission Act, as well as the extra 25 percent portion of the dealer rebate.

Meanwhile, GM dealers in Louisiana (joined by the company) were also in court, trying to get the rebate program approved for advertising and promotion purposes.

It had apparently been considered deceptive advertising, and Louisiana dealers were trying to get a new ruling so the program could be offered.

Texas and Louisiana consider GM's rebates deceptive because the 25 percent that dealers contribute ends up getting charged back to customers in the form of lower dealer discounts.

In essence, customers really only get the 75 percent factory portion, according to the Texas attorney general.

• Ford Motor circumvented the problem by offering just the factory portion of its rebate in Texas. Chrysler has no dealer participation in its rebates.

GM could have followed Ford's tactic, just lowering the amount, but decided to test the law.

Russell Harding, executive director of the Texas Motor Vehicle Commission, and Gene Fondren, of the Texas Automobile Dealers Assn., among others, told AUTOMOTIVE NEWS they both warned GM of the legal risks it was running, early on.

But GM apparently felt its program could fly, because this time suppliers and employes, as well as dealers, were chipping in to help defray overall costs.

Many GM dealers in Texas back the suit. They want GM's rebate program intact, but they want the company to pay for the full costs of the rebates.

But, meanwhile, dealers like John Snell, Snell Cadillac, Dallas, Glen Goode, Taylor Pontiac, Dallas, and Jack Mitchell, Superior Pontiac, San Antonio, said business had dried up in the wake of consumer confusion, and they didn't know what to say in their ads.

GM called the Texas attorney general's suit "most unfortunate and untimely."

GM added, "The suit appears to be more concerned with bene-

FWD designed by Giugiaro may bow in '84

Japan to build baby car for Chevy

By Paul Lienert
Contributing Editor

Chevrolet, whose subcompact Chevette was America's best-selling car last year, plans to strengthen its position in the economy-car market by introducing a new Japanese-built minicompact in the mid '80s that will be smaller than any vehicle presently sold in this country by General Motors.

The "baby" Chevy, which reportedly will be developed jointly by Suzuki and Isuzu (both are GM affiliates) and assembled by the latter, is said to be an all-new design, smaller than Chevette but larger than the new GM S-car that will be introduced in Europe this fall.

It will be designed, according to sources, by Italy's Giugiaro, who previously has done several designs for the Japanese companies, including the Isuzu Piazza and the original Suzuki Fronte.

Sources in Japan indicate the car is a front-drive design, with a small single-overhead-camshaft engine, four-cylinder, displacing 1.0 to 1.3 liters, coupled with a five-speed overdrive transmission.

The tiny two-door hatchback will seat four persons and carry several bags of groceries, while its light weight (estimated at 1,600 pounds) and 50-HP engine should enable it to deliver well over 40 MPG in city driving.

The car reportedly will have a wheelbase of about 90 inches and will measure about 150 inches overall; the Chevette two-door, in comparison, has a wheelbase of 94.3 inches, overall length of 161.9 inches and curb weight of 2,000 pounds.

Timing of the car's American launch is unclear; sources pre-

Toyota, Mazda try truck incentives

Rebate fever spreads to Chrysler and Fiat

By Joseph Bohn
Marketing Editor

Chrysler has revised its consumer rebates, while Toyota and Mazda have launched dealer incentives on trucks. Fiat has a new rebate.

The Chrysler changes are in response to the current General Motors and Ford Motor Co. rebates.

In what it calls the "February bonus program," Chrysler increased rebates on '81 and '82 Omni/Horizon, excluding '82 Miser models, to $500 from a previous $300. The '82 Miser models don't qualify for any rebates.

It increased rebates to $500 on the '81 TC3 and 024, including the Miser versions. The '82 TC3/024 still get $300 rebates.

It also increased rebates on '81 and '82 Ramcharger/Trail Duster models to $2,000 from a previous $1,000.

These changes affect models sold or delivered from Feb. 8 to Feb. 28. Previously ordered units delivered during the time frame also qualify for the higher amounts.

Other Chrysler models, except Imperial, continue being covered as before. Chrysler has not required any dealer contribution under its new or previous program, but continues requiring dealers to replace what they sell with fresh orders.

Chrysler's new Imperial program has three phases.

Chrysler is issuing dealers rebate certificates worth $2,000 for the Feb. 8 to May 31 period, good on any '81 or '82 new Imperial model ordered or delivered during the time frame.

At the same time, it is giving salespeople $300 on every sale or lease of a new '81 or '82 Imperial during this period.

Finally, it is giving dealers $1,000 off on any '82 Imperial they order from Feb. 8 to March 31.

Chrysler's $2,000 Imperial rebate pre-empts the previous rebate of $1,000 it was offering on Imperial under a program due to end Feb. 28.

Chrysler's other rebates are due to end Feb. 28, and some followup program is anticipated. However, there is no indication whether Chrysler will extend any of its current programs, or modify them.

The company is promoting its rebate changes with new advertising and a direct-mail program.

The direct mail on Imperial, telling customers of the rebate certificates, will go out to 600,000 prospects, beginning in early March.

Prospects will receive a Cartier gift for visiting dealer showrooms.

Chrysler ran a newspaper ad Feb. 9 in 33 markets, with the headline, "Lower prices on more rebated car models than GM or Ford."

It is also running radio spots in the same 33 markets, with the theme "You can do better at Chrysler."

Most of Chrysler corporate TV schedule for February will be devoted to the new rebates, and car-line spots will be tagged with new prices.

In its TV, Chrysler names competitive makes, citing Omni/Horizon as being less than Cavalier, even with its rebate, and the K-car less than Granada.

Commercials stress that "only Chrysler gives you all the cash back, while the other two (Ford, GM) depend on participating dealers," a Kenyon & Eckhardt ad agency spokesman said.

• Meanwhile, Fiat launched a Feb. 8-May 8 dealer incentive. Dealers receive $1,500 on every '81 Brava and Strada and $750 on every '81 X 1/9 they retail during the period.

They also receive $1,500 on '82 Stradas. There is no '82 Brava in the U. S.

Dealers also receive $300 on '81 Brava and Strada sedans they order from cars still left at the port and $600 on '81 X 1/9 models. This special "purchase incentive" is in addition to money paid on retail sales. Port-purchased cars also qualify for the retail portion of the program.

William P. Rude, director of marketing and sales planning, Fiat Motors of North America, said there were few units left in port inventory.

He added that Fiat had gone to a new ordering system beginning with October production, in which dealers specified the color, options, etc., they wanted on cars they ordered and committed to accepting the units.

He added that the current incentive program was not being nationally advertised by Fiat, but the company was co-oping to the tune of $100 per car for local dealer and association advertising as well as providing ad mats, radio scripts, etc., for dealers.

He said ads were written to promote the incentive program along the lines of the factory

Chevy, Pontiac add price-leader J-car coupes

Chevrolet and Pontiac will each add a third price-leader model, a coupe, to their J-car lineups to supplement existing lower-priced sedan and wagon versions of the car introduced in January.

At $6,278, the Chevrolet Cavalier Cadet coupe will be the lowest-priced of all J-car models. That's a $738 reduction from the base coupe's price of $7,016. The prices do not include a $355 destination fee.

The Cavalier Cadet coupe is expected at dealerships in mid-April.

The new Pontiac J2000 S coupe will have a list price of $6,734, a $315 price cut from the base coupe's price of $7,049. Prices do not include a $355 destination fee. The J2000 S coupe will be at dealerships in mid-March.

Standard equipment pulled from the price-leader models includes rear defogger, radio, power remote-opening decklid and various trim pieces. Interior and exterior color choices are limited.

Salt Flats speedster

Fueled by two Holley brand Model 4150 carburetors, this turbo-charged Corvette raced across the Bonneville Salt Flats recently to notch a speed record for a stock-bodied automobile: 240.738 MPH. The turbo-carburetor package produced 1,100 HP from a 430-CID Chevrolet engine. Gale Banks Engineering, San Gabriel, Calif., built the turbo system for Bob Kehoe's Corvette. It was driven by Duane McKinney.

Ford, UAW discuss three major issues

By Marjorie Sorge
Labor Editor

DEARBORN. — Outsourcing, job security and plant closings are major issues in any new contract between the UAW and Ford Motor Co.

The UAW and Ford have been negotiating steadily for about two weeks and a decision seemed near at presstime. There was no indication if a new contract could be reached, but Peter J. Pestillo, Ford vice president, labor relations was "cautiously optimistic."

The company put a proposal on the table Jan. 15 but it remained on the back burner while talks continued with General Motors. Those negotiations fell apart even though the parties were close to an agreement.

The Ford proposal offers workers with 15 years or more seniority guaranteed income for life if they are laid off or their plants are closed. That income would be at least 50 percent of their base hourly rate until retirement or age 62.

It also offers a 12-month moratorium on plant closings although Ford maintains the right to close plants for volume-related reasons or product changes.

UAW President Douglas A. Fraser said the union needs a better plan on plant closings and guaranteed income. Donald Ephlin, UAW vice president and director of the Ford Department, has said the union would like to see the guaranteed income made available to workers with 10 years seniority. If the program's seniority were lowered, it would make it more difficult for Ford to close plant because of the expense of paying those workers.

However, the union also wants a longer moratorium on plant closings, Pestillo said.

The Ford proposal also called

Lyles prepares to assume presidency at Atlanta convention

Strong views from next man at NADA helm

By Robert M. Lienert
Editor

He sells Chevrolet and Rolls-Royce, but not from the same showroom.

He says the industry needs a "severe" price cut.

He says dealers have more clout with their congressmen than with their factories.

He says a lot of dealers can afford a domestic franchise only because their import franchise pays the bills.

He says there are too many dealers still in business.

He says the fully equipped car has bombed.

He says the entire industry is in a downhill trend and he doesn't see how anybody can go into the car business today.

Who is he?

He is George W. Lyles, and if you are a member of NADA he is going to be your president this year.

• Lyles, whose dealerships are in High Point, N. C. (with a second Chevrolet deal in Tryon, N. C.), will accept the NADA gavel next week during the NADA Convention and Exposition in Atlanta.

Despite some of his rather surprising views on this business, he seems very much the prototype successful dealer who learned the business at his father's side and who is passing the expertise along to his son.

He views the auto industry as "interesting and exciting," though he is quick to recognize and point out its problems.

For that reason he is, perhaps, precisely the man NADA needs at the helm at this point.

"This is a severe business if not looked after on a daily basis," Lyles said.

He implies that at General Motors, the most severe problems are in Chevrolet's lap. That, he said, is a situation that has developed quite recently.

During the 1974 oil embargo, he said, Chevrolet did rather well because the dealers had small, efficient cars, while the other General Motors divisions did not. At that time, he said, Chevrolet accounted for 48 percent of GM's business. He said it is considerably less than that now.

• Since 1974, he said, the prices of Buick, Oldsmobile and Pontiac have moved close to Chevrolet stickers "and have exposed the entire Chevrolet line to other divisions."

"You can't sell Chevrolets when you have other GM cars in the same showroom," he said.

Yet, he said, when this problem was brought up at a Chevrolet Dealer Council meeting, GM President F. James McDonald said, "What you fellows are telling us is that we are not charging enough on Buicks and Oldsmobiles."

Lyles said Chevrolet dealers left that meeting feeling that GM executives had got the mes-

He urges FDA members to learn to survive without Ford

Mullane touts dealer self-reliance

By John A. Russell
New York Staff Writer

PORTCHESTER, N. Y. — Trumpeting the theme that survival of Ford dealers is not necessarily tied to the survival of Ford Motor Co., Ed Mullane, president of the Ford Dealers Alliance, urged FDA members at the annual meeting here to look to themselves for their survival and to develop their businesses independent of the factory.

Mullane blasted the company with many of the issues he has developed during the year, centering on the quality of management and product at the company. And he proposed to the membership his concept of how dealers can survive.

"We're going to do it by starting with the idea that our survival is not necessarily tied to that of Ford, by working on the theory that even if the company went broke, we dealers could still survive," he said.

He stressed to the membership that new-car operations are not keeping dealers alive. Dealers' other operations — including service, parts, leasing, daily rentals and used cars — are accomplishing the feat, he said.

"Our other operations are carrying our new-car departments. Ford isn't carrying us, we're carrying them," he said.

Mullane urged that dealers "sever the psychological support line that Ford is using to drag us down with them" and take definite steps in their own interest.

• He urged dealers to stop carrying inventory in traditional volume — especially of cars that are not selling. He cited as an example the Ford EXP, with its 207-day supply.

He urged dealers to put their floor-plan money into used cars.

"Perhaps the ratio should be two-thirds used and one-third new," he said, stressing that "this is the one growth market we've got." He added: "Here's where inventory works for you, in used cars and trucks."

Coming back to a theme he has used for several years, Mullane urged a radical approach to overdealering.

"We've got to start merging and combining deals in areas where there are too many of us for anyone to make money," he said.

He also urged that dealers dual.

"Dual with an import if you can possibly get one — with or without permission."

In other business at the meeting, Bob Webster was named a lifetime director. He is a past dealer leader, dealer council representative and former chairman of the New York Ford Dealer Advertising Fund.

Elected vice presidents were George Purvis, Charlotte Ford District, and Bob Smith, Pittsburgh District. They join Dick Wagner, Boston District; Mannie Pombo, New York District, and Frank Nappa, Newark District.

Bob White, Robert Motor Sales, Attleboro, Mass., was elected a director.

Reelected were Mullane, president; Jim Peirce, Boston District, chairman; Peter Griffin, New York District, treasurer, and Bill Stevens, New York District, secretary.

Smaller Mercury Marquis planned

The new fullsize Ford Motor cars, due in 1983, will be based on the current Fairmont package, sources say. This model, with vertical grill, is the new Mercury Marquis. Wheelbase will be about 105 inches.

New-model launch its most ambitious ever

Ford looks to '83s for market boost

Continued from Page 8

company lost a staggering $1.5 billion in 1980, and its losses for '81 were more than $1 billion, bringing the company's two-year deficit to more than $2.5 billion.

In comparison, the ailing Chrysler Corp., which was forced to seek financial aid from the federal government two years ago, lost $1.7 billion in 1980, but its '81 deficit may be only about $500 million —a two-year loss of $2.2 billion.

• Ford's precarious financial position apparently has convinced company leaders already that they can't pay for the tremendous overhaul of the company's car lines that will be necessary to carry the firm through the tumultuous '80s.

Consequently, Ford has turned overseas for assistance, to independent companies like BMW (for diesel engines), as well as its own subsidiaries and affiliates, like Japan's Toyo Kogyo, which is supplying the company with transaxles and engines and may even build a new minicar for its U. S. partner.

Talks with Toyota over joint production of a minivan in Ford's U. S. facilities fell through last year, as did discussions with several other smaller Japanese companies, including Daihatsu and Suzuki.

But Ford is pursuing any avenue it can to save money and share expenses on future new-car programs, and the possibility still exists that it may import some car lines in the mid '80s from its European subsidiaries.

Beyond '83, Ford will launch two major programs in 1985-86. (A smaller Lincoln Mark VII will debut in '84 as a sister car to the recently introduced Continental.)

In mid-1984, the company is planning to begin selling a new front-drive minicompact being developed in Japan by its partner Toyo Kogyo (Mazda), under the code name "Minx."

The car will be smaller than Escort; it will seat four passengers and should deliver over 40 MPG in city driving. The car will be assembled in Japan by Toyo Kogyo and exported to the U. S., where it will be sold in different versions through Ford and Mazda dealerships, according to present plans.

In mid-1985, Ford will introduce the first of its new "Taurus" models to replace the Lincoln Mark, Town Car and Continental.

Taurus is a small front-wheel drive model, about the size of today's Fairmont, with a base four-cylinder engine and five-speed overdrive transaxle. A turbocharged four-cylinder diesel (imported from BMW) and four-speed automatic overdrive transaxle also will be available, along with an optional 3.0-liter V-6 gas engine.

Ford originally envisioned Taurus as the successor to the present "Panther" series — the big LTD, Marquis and Lincoln cars — but there is some question now as to whether the next-generation Ford and Mercury sedans should be smaller even than the Taurus, which will be available in two wheelbases (105.7 and 108 inches).

• The company had planned to convert virtually all of its U. S. car lines to front-wheel drive by the mid '80s, but that program looks less certain, given Ford's poor financial picture and the uncertainty over future automotive demand.

Ford is fearful that a major shift in the market to significantly smaller cars will begin around 1985-'86, accelerating in the late '80s, and that the new cars it had planned to introduce at mid-decade might not be small enough to carry it to 1990.

Ford still wants to convert Mustang and Thunderbird to front-drive around 1987, but it may seek help in developing and building its larger family sedans from overseas — from its Japanese partner, Toyo Kogyo, or through its own European subsidiaries.

The Japanese firm has a reputation for building excellent small cars, but wants to move upmarket into the class now occupied by Toyota (Cressida) and Nissan (Maxima) with its own Mazda Luce sedan. Sources say Toyo Kogyo is considering selling the car in the U. S., perhaps with a rotary engine, as the Mazda RX-9.

In addition, Ford of Germany is developing a modern sedan to replace the European Granada under the code name "Scorpio," and some Ford executives in North America feel the new car could be marketed successfully in this country as the successor to the LTD and Marquis. It is believed Scorpio is a rear-drive model, with engines to include four-cylinder and V-6 gas, diesel and turbodiesel units.

Japan to build baby Chevy; stylish FWD due in 1984

Continued from Page 1

dict GM may import the car from Japan in late 1984 as an '85 model. That timetable is about the same as for Ford, which plans to bring in a fully assembled minicar from Toyo Kogyo, its Japanese partner.

• Speculation about a joint venture between GM and the two Japanese companies arose last year when GM bought into Suzuki, which in turn inked a cooperative pact with Isuzu (GM owns 34.2 percent of Isuzu).

GM originally planned to build an American version of the European S-car in 1984-85, with three-cylinder gas and diesel engines to come from Chevrolet and Buick.

But the corporation apparently believed the domestic minicar would be too costly to assemble, compared with an imported model from its Japanese partners, and ultimately scrapped the American S-car project and engine programs.

Insiders say the joint venture makes sense for all parties, especially since Isuzu's management has been reluctant to get into the minicar market in Japan, and Suzuki, a minicar specialist, has little plant capacity with which to supply GM in the American market.

GM presumably would reap additional savings since labor costs are considerably lower in Japan than in the U. S.

Initial reports say Isuzu will supply about 200,000 cars a year to its American partner.

Meanwhile, the Chevette continues to sell well in this country, despite its age (the basic design is more than 10 years old) and lack of innovative technology, and the Chevette diesel (the engine comes from Isuzu) is among the EPA mileage leaders in the U. S.

And since the tooling has long since been amortized, Chevrolet is most likely to continue building its popular rear-drive subcompact well into the '80s — as long as demand warrants.

Austrian ATV

For about $50,000, the ultimate in all-terrain vehicles will soon be available in the U. S. The mostly hand-built 4x4 Pinzgauer is being imported from Austria by a Texas firm which plans on distributing about 1,000 a year here.

Texas firm to market Austrian-built ATV

DALLAS, Tex. — A company has been formed here to distribute an Americanized version of the Austrian-built Pinzgauer, an all-terrain, four-wheel-drive vehicle (ATV).

Pinzgauer franchises will be made available first to Mercedes-Benz, Porsche-Audi and BMW dealers in the U. S., according to Ed Russell, president of the newly formed Pinzgauer of America, Arlington, Tex. He said the suggested sticker price will be approximately $50,000.

Russell is the founder of Good Times, Inc., which marketed customized vans between 1973 and 1980, and also is the former owner of Prestige Vehicles, manufacturers of emergency vehicles. He currently is president of Custom Vehicles, Inc., of Arlington.

Originally designed as a military vehicle, the Pinzgauer, which resembles a high-slung van, has the power and maneuverability to make it effective under virtually any kind of highway or off-highway conditions, Russell said.

The first public showing of the vehicle is planned in conjunction with the annual NADA convention in Atlanta Feb. 20-23.

• The Pinzgauer is manufactured in Graz, Austria, by Steyr-Daimler-Puch, which also produces Steyr buses and trucks, Puch mopeds and Steyr-Mannlicher firearms.

Since most of the work done is by hand, only about seven Pinzgauers leave the factory each day, Russell said.

"The Pinzgauer is not for everyone," he said. "The price will appeal only to a certain class of people who appreciate the best

Trucking income, tonnage drop to lower levels

WASHINGTON.—A survey of 208 motor common carriers of general freight operating throughout the U. S. indicates that the trucking industry remains locked in a recession.

The survey, conducted by the Regular Common Carrier Conference (RCCC), showed that truck tonnage (tons of freight) carried by the 208 trucking companies is below past levels.

For the third quarter of 1981, the surveyed firms carried 31.6

truck industry news

Compact-pickup volume soars 33.6 pct. over '81

Big 3 January sales up 13.3 pct.

Retail sales of trucks produced by the Big Three in the first month of 1982 were 13.3 percent higher than a year ago, and the compact-pickup volume was up a whopping 33.6 percent.

Franchised Big Three dealers and factory outlets sold 148,272 units in January, compared with 130,878 the previous year. Compact pickup sales, domestic and imports, totaled 44,871, as against 33,574 in 1981.

Chevrolet was No. 1 in retail volume for the third consecutive month, with its all-new S-10 compact pickup providing the spark.

During the month, Chevrolet dealers sold 62,771 units, compared with 51,329 for Ford. The Chevrolet total included 11,672 S-10 pickups, bringing to 27,145 the number of these vehicles sold since they were introduced in November.

Chevrolet's January sales were 15 percent higher than last year's 54,580 units, but its sales of the Japanese-built LUV continued in steep decline following the debut of the S-10. Only 2,750 LUVs were retailed in January, down 56.8 percent from the year-earlier 6,366.

• Ford sales for the first month were 5.1 percent higher than the 48,846 units retailed in January, 1981. Courier deliveries were off 9.3 percent, from 4,659 a year ago to 4,228.

Dodge and Chrysler-Plymouth dealers retailed 19,084 light trucks during the month, an increase of 56.4 percent over last year's 12,201 units.

Sales of the Japanese-built Dodge Ram 50 in January were up 60 percent over a year ago, from 2,182 units to 3,481. This year's count included 232 of the new Ram 50 4x4 vehicles introduced in January.

The new Dodge Rampage front-wheel-drive compact pickup, based on the Omni/Horizon auto chassis, also made its debut in dealer showrooms in Jan-

'Twins' could save millions of gallons of fuel, ATA ays

WASHINGTON. — Nearly 230 million gallons of diesel fuel could be saved in the U. S. if 65-foot twin-trailers were permitted in all states, according to the department of energy and economists of the American Trucking Assns.

Roger Kolins, ATA's senior economist, told the 61st annual meeting of the Transportation Research Board here the study uses the bridge formula B to define the gross-vehicle-weight limits of five-axle trucks as is the case in many states.

This formula, when applied to 65-foot twin-trailer operations, permits them to operate under or up to 85,500 gross-vehicle weight-limits as opposed to the arbitrary federal ceiling of 80,000 pounds now used for tractors-semitrailers, Kolins said.

The ATA study was based on operations in 16 states which allow the operation of the 65-foot twin-trailer at the 85,500-pound weight limit. Findings are based on nearly 200,000 trailer movements samples of carriers' line-haul operations data.

Kolins said this information was used to estimate the average payload weights a general freight carrier will experience under given size and weight limit.

The study concludes that if the remaining 34 states and the District of Columbia permitted the operation of the 65-foot twin-trailer at 85,000-pound limits, a total of 229,927,000 gallons of diesel fuel — based on 1979 diesel fuel consumption rates— would be saved.

Wider use is forecast for tandem trailers

TEANECK, N. J. — Tandem truck trailers will be in much wider use within the decade, according to heavy-duty fleet executives and owner/operators polled by the Heavy Duty Division of the Motor & Equipment Manufacturers Assn.

The respondents are members of nationwide panels used by MEMA's Heavy - Duty Division in periodic studies of component buying, maintenance practices and other heavy-duty trends.

The question of future rig size was included in a 1981 study, according to William A. Raftery, MEMA president, because members sell to both the original-equipment truck market and to the heavy - duty aftermarket, making the question of future rig size significant to MEMA member production planning.

"Increased use of combinations," he observed, "will mean increased demand for Class 8 tractors, reduced demand for medium-weight units and a shift in trailer requirements such as axles and brakes.

"Medium and light - duty trucks are characteristically assembled by vehicle makers with more of their own parts and components than the Class 8 vehicles, which are more subject to customer specification and therefore represent more opportunity for the independent manufacturer," he added.

In addition to the impact of shifting tractor and trailer sizes, Raftery noted, the heavier load-hauling will affect wear on a wide variety of parts and components, stepping up demand for

Daimler to buy Freightliner's credit company

STUTTGART, West Germany. — Daimler - Benz, which last summer purchased Freightliner Corp., said it has received U. S. approval to buy Freightliner Credit Corp., a subsidiary of the U. S. firm.

Daimler-Benz did not provide details about the purchase price.

A spokesman for the German firm said Freightliner Credit will provide financing for Daimler, Freightliner and Euclid products in the U. S.

Eventually, the credit firm is expected to offer wholesale and retail financing to dealers and customers of Mercedes-Benz Truck Co.

Federal Reserve Board approval of the purchase of Freightliner Credit was required because West Germany's largest bank, Deutsche Bank, is a Daimler-Benz shareholder. This places the U. S. credit firm under the indirect influence of a foreign bank.

4-WAY Plate called versatile

E. R. Buske Mfg. Co., Pocahontas, Ia., said it uses 4-WAY Plate in its 14 models of wreckers because of its versatility. The floor plate made by Inland Steel Co. looks good and its raised lugs provide traction for walking and keep items from sliding around on the truck, Buske said. The plate also is offered on running boards as an option.

Streamlining to cut fuel consumption

Attaching the fiberglass Airgo air deflector to the blunt face of a cargo van can result in improved truck handling at freeway or highway speeds and increase MPG in the 10 to 15 percent range, according to the manufacturer, Fiber-Tech, 114 S. Cedar Rd., Kalispell, Mont. Options permit Airgo's interior to be used as additional cargo space, with entry from side-mounted doors or a port in the van's face.

Golden anniversary for Scott Motor

William Keith Scott, right, founder and president of Scott Motors, Reno, is presented with a plaque of appreciation by W. E. Kindley, zone manager for Cadillac. Scott has completed more than 50 years of service as a Cadillac dealer in northern Nevada. This is his 52nd year with Cadillac and his 53rd with Buick.

Compact-pickup volume soars 33.6 pct. over '81

Big 3 January sales are up 13.3 pct.

Continued from Page 1

uary, and 973 units were retailed.

Sales of the imported Plymouth Arrow compact pickup during the month totaled 653 units, a decline of 9.3 percent below the 720 retailed in the same month in 1981.

GMC Truck & Coach Division reported that its dealers retailed 15,088 vehicles during the month, a drop of 1.1 percent below the year-earlier 15,251. The count included 1,772 S-15 compact pickups.

• Sales of Jeep four-wheel-drive vehicles in January were down 1.7 percent from a year ago to 4,363 units, compared with 4,437 last year. The total included 577 Scramblers, the compact pickup introduced in the second quarter of 1981.

Volkswagen dealers retailed 1,115 compact, front-wheel-drive Rabbit pickups during the month, a decline of 45.6 percent from last year's 2,049 units.

Mercedes-Benz Truck Co. reported that its dealers sold 152 medium-range diesel vehicles in January, down 44.3 percent from the 273 units retailed in the same month a year ago.

January sales were down for two of the four independent distributors of Japanese-produced compact pickups.

Toyota dealers retailed 8,468 units during the month, a decline of 12.3 percent from last year's 9,658. Datsun deliveries were off 13.9 percent, from 7,250 units in January, 1981, to 6,245.

Sales of Mazda pickups were up 152 percent, from 690 vehicles a year ago to 1,739 units. Isuzu dealers retailed 1,198 compacts during the month.

During the month, sales of the non-captive compact pickups totaled 17,650 units, up 52 from the year-ago 17,598. The captives — LUV, Courier, Ram 50 and Arrow — were off 20.2 percent from last year, 11,112 versus 13,927.

Trucking income, tonnage drop to lower levels

Continued from Page 18

million tons. Highest third-quarter tonnage was recorded in 1973, at 45.6 million. In fact, third-quarter 1981 tonnage was the second lowest in the 15 years of survey the RCCC said.

Carrier operating margin (operating income divided by operating revenue) during the third quarter of 1981 was 3.6 percent, compared with 4.5 percent in the third quarter of 1980, and 5.3 percent in the third quarter of 1979. The 1981 figure is the lowest for any third quarter in the survey. The average margin for the third quarter between 1967 and 1980 was 5.7 percent.

Expenses rose to new highs despite the depressed tonnage levels. Operating expenses for the third quarter of 1981 were 13.2 percent higher than in the third quarter of 1980, while revenues were only 12.1 percent higher.

New C-P deal opens

service management

Volvo cited for service performance

John C. Theis, left, general manager, Service Division, Volvo of America Corp., Rockleigh, N. J., receives the first Volvo Car Corp. Award for Service Excellence, while Bjorn Ahlstrom, president of Volvo of America, holds the trophy presented to him as head of the winning importer company. The award was presented in Gothenberg, Sweden, during Volvo Car Corp.'s international marketing conference.

FPSD programs beefing up dealership service training

DEARBORN. — Service training received by technicians employed by Ford and Lincoln-Mercury dealerships has increased 128 percent during the past four years, according to E. L. Riley, manager, Training and Publications Department, Ford Parts and Service Division (FPSD).

This increase in service training, according to Riley, has made "a valuable contribution to customers' satisfaction with their Ford and L-M products."

In 1981, FPSD's 29 district offices provided more than 650,000 hours of technical training in 97 subjects to Ford and L-M dealership service personnel, Riley said.

The training sessions were conducted either at one of the division's 38 service schools or in field locations across the country, Riley said.

"From an average of 16.5 hours per technician in 1980, the average amount of training per technician rose to 18.5 hours last year," Riley said. "This compares with an average of 8.1 hours per technician four years ago.

"These figures indicate our

Computer helps VW dealers pool their service records

ORANGEBURG, N. Y.—One hundred twenty-seven Volkswagen, Porsche and Audi dealers in this area have tied into a computer network that provides fast, individualized service histories for cars sold and serviced by any of the participating dealers.

The computer network was launched in 1979 by World-Wide Volkswagen here, the distributor for New York, New Jersey and Connecticut.

It has been expanded from three dealerships which participated in the pilot program to the 127 dealerships with 450 IBM computer terminals conducting 120,000 transactions a day. The main computer is based at World-Wide offices.

By keying in a car's vehicle identification number, its service history and warranty status flashes onto a television-like screen within seconds.

The service file was added to an existing computer system that handled dealer accounting. It developed from a 1978 review of dealership profits, said Rainer Josenhanss, executive vice president of World-Wide Volkswagen.

"I noticed dealers were selling less service and fewer parts than in 1977," he said. "More than 31 percent of the total profits from our dealers are derived from the sale of parts.

"It's critical that our dealers hold onto their customers three or four years, until they are ready to buy new cars."

Josenhanns said he wanted a system that would enhance dealers' reputations for honest service.

"Also, I wanted a system that would tell us which customers

13.5 pct. gain annually through 1985 is forecast

Auto service seen rising

By Francis J. Gawronski
Service Editor

With gloomy car and truck sales reports being issued at regular intervals and indications that the automobile industry may be hard pressed for some time to achieve the sales volume of a few years ago, it is heartening to come across a forecast that projects growth—and more profits—for at least one segment of the automotive business.

The encouraging appraisal is for the domestic market for automotive service — both labor and parts — where the increase is projected at an average 13.5 percent annually in current dollars from $48.7 billion in 1981 to $80.8 billion in 1985.

This represents an acceleration in growth over the 1977-1981 period, during which revenues rose an average 12.2 percent per year, according to a study by Frost & Sullivan, Inc., a New York-based marketing research firm.

• The study predicts above-average growth for the repair-specialist sector, tire stores, auto supply stores, garages, body shops, jobber retailers and mass merchandisers, while below-average growth is forecast for new-car/truck dealers and service stations.

F&S said automotive service currently accounts for about two-thirds of the total automotive aftermarket, the remainder going to the do-it-yourself sector.

In its study, Automotive Service, Parts and Test Equipment Market, F&S noted that within the service field, labor charges presently represent 48.4 percent of total receipts, down from the 60 percent level of a decade ago.

Analyzing the service market by trade groups, F&S said the repair specialist sector will be the fastest growing, with receipts forecast to grow 16 percent annually from $6.35 billion in 1981 to $11.5 billion in 1985.

With that, the specialist sector's share of the overall market is seen expanding from 13 percent to 14.2 percent.

"Benefitting from a thoroughly business-minded approach to promoting traffic and achieving high utilization of facilities and hours of service, their revenues per day have been substantially higher than those of other trade groups," F&S said.

"These specialists will encounter stiffer competition in 1981-1985 from other businessmen who intend to increase their share of the automotive service market," F&S said.

• "These include auto supply chains, tire dealers, mass merchants, and jobber-retailers, plus major tire company chains and oil companies and car dealers who are attempting a resurgence

Auto chemicals sales grow

Aided by motorists who are holding onto their vehicles longer and the trend to more do-it-yourself jobs, sales of automotive chemical specialties reached $1.6 billion in 1981, according to a survey by Charles H. Kline Co., Inc.

Kline noted that 1981 sales were up substantially from the $800 million recorded in 1974 when a similar survey was completed.

Although dollar value doubled in this seven-year period, unit volume grew by only 3 percent. According to results from the new survey conducted by the Fairfield (N. J.) marketing consultants, price increases contributed to the major part of the increase.

Radiator antifreeze was by far the dominant product category, Kline said after a preliminary investigation of the market before beginning its detailed field work this winter.

Antifreeze brought sales of $535 million in 1981. Kline said Union Carbide Corp.'s Prestone remains the dominant national brand but regional marketers and mass merchandisers with their private-label products are making inroads in this field.

• Waxes and polishes, with 1981 sales of $120 million, have been one of the most dynamic categories in recent years, according to the survey.

Kline said the introduction and popularity of long-lasting and easy-to-apply products, also known as "poly" waxes, has spurred dollar sales of all waxes and polishes far above the inflation level.

Oil additives, once the fastest growing category in the automotive chemical business, were hurt by bad publicity in the mid-1970s and have shown limited unit growth since that time, Kline said.

However, the oil-additive category has increased in dollar volume with inflation and now represents $90 million in marketers' sales to the aftermarket.

According to Kline, a preliminary survey breakdown of the market by other product categories is as follows:

Automatic transmission fluids, $75 million; lubricating greases, $70 million; brake fluid, $60 million; filling patching compounds, $55 million; gasoline additives, $35 million; touch-up paint, $30 million; and all other, $530 million.

Historical and future growth of chemicals, according to Kline, varies inversely with sales of new cars. As consumers keep their current automobiles for longer periods, maintenance expenses rise, thus spurring sales of such products as antifreeze,

Time-saving diesel timer

Designed for timing General Motors' 5.7-liter V-8 and 4.3-liter V-6 diesel engines, the MT 480 diesel timing meter, introduced by Snap-On Tool Corp., Kenosha, Wis., and approved by GM, allows a mechanic to check just how far the timing is off, rotate the pump accordingly and use the meter to check results instead of approximating timing as with the old static method. The setup, testing, adjustment and retesting steps can all be done in 30 minutes or less, according to Jim Phiel, above, Snap-On test and application specialist. With a probe soon to be available, the meter will be compatible with GM's new 6.2-liter engine. As probes are developed, the meter's usage will be expanded to other diesels.

shop talk

Continued from Page 20

radiator additives, automatic transmission and brake fluids and touch-up paint.

Kline said the trend to more do-it-yourself tasks also will continue to aid the automotive chemical business in the future. Even such projects as lubrications are now performed by do-it-yourselfers.

Taking these and other factors into account, Kline predicts a modest growth for the overall industry but a rosy future for some categories of the auto chemical specialties.

The firm forecasts that unit sales of the entire industry will increase only 2.3 percent annually from 1981 to 1986. Sales will be $1.9 billion in 1986, as measured in constant dollars or $3 billion on inflationary price increases averaging 10 percent a year.

Kline said the overall market will be held back by the large market size of some slow-growth categories like antifreeze, oil additives, automatic transmission fluids and brake fluid.

By contrast, Kline said, some of the fast-paced product groups, such as spray penetrants and vinyl protectors and cleaners, will continue to grow rapidly.

According to early results for the survey, even the $120-million market for waxes and polishes will increase at a good rate, spurred by the popularity of high-priced products.

The survey, Automotive Chemical Specialties, which is the fourth edition of this market study, will be based on an analysis of 1,450 interviews with consumers, retailers, suppliers, wholesalers, distributors, government agencies and other trade factors, according to Kline.

The study will be published in late 1982. The subscription price of $13,500 includes access to all data, one day of consultation and five copies of the report.

Estimated U. S. Sales of Automotive Chemicals Specialties 1981

Millions of Manufacturers' Dollars

Radiator antifreeze	$ 535
Waxes and polishes	120
Oil additives	90
Automatic transmission fluids	75
Lubricating greases	70
Brake fluid	60
Filling patching compounds	55
Gasoline additives	35
Touch-up paint	30
All other	530
Total	$1,600

hadn't come in for warranty work or routine maintenance because then we would be able to send out a mailing to bring them back to the shop," he said.

"I looked at the manual filing system we were using back then and almost every dealer I talked to told me the files were hard to keep up to date and that a lot of clerical time was required."

The computer system also was designed to help target customers for promotional mailings on service specials.

One of the network's first participants, Enzo Montesi, Montesi Motors, West Haven, Conn., said he is pleased with the results at his dealership.

He said that even though the auto industry is in a down cycle, there was an improvement in his service-repair sales.

• Favorable customer response to the instantaneous information is one benefit, he cited. Some of his customers are traveling salesmen who use the computer printouts detailing a year's service work as part of the tax documentation submitted to IRS, he said.

Frank J. Schaffeld, World-Wide VW's vice president—service, cited another plus of the new system: "The equipment provides for quicker entry of all accounting data, easier entry of warranty claims and easier recovery and corrections of errors."

World-Wide's host computer is an IBM System/370 Model 158-3. Participating dealerships have IBM 3278 vidio display terminals and IBM 3287 printers, which replaced older typewriter-like terminals.

Because the system is used so heavily, World-Wide is testing five IBM 3863 modems that are better able to diagnose problems within the computer system and communications lines that transmit data.

product that money can buy. And initially, there will be only about 1,000 available in the U. S."

He said the vehicle will appeal not only to sportsmen and enthusiasts, but also to such businesses as oil-production and oilfield-service companies, seismic crews, surveyors, construction companies, snow ski resorts and logging companies.

Named for an Austrian work horse that is highly prized for its strength and sure-footedness, the Pinzgauer was originally developed for the Swiss army as a personnel carrier to meet the demands of cross-country travel in the rugged Alps.

• Weighing about 4,300 pounds, the Pinzgauer has a load capacity of 1,700 pounds, an 87-inch wheelbase, a top speed of 70 MPH and carries five people.

The vehicle can climb a 45-degree slope, has a 13-inch ground clearance, and can ford 24 inches of water, Russell said.

It features four-wheel independent suspension with swing axles; four-wheel, power assisted disk brakes; 2.7 liter, 100 HP air-cooled, in-line four-cylinder engine; portal axles for increased bottom clearance; two-speed, full synchronized transfer case providing 10 forward gears and two reverse gears; hydraulically-locking front and rear differentials; single coil front springs and double coil rear springs.

Hydraulic controls enable the driver to shift to four-wheel drive while the vehicle is moving at any speed, Russell said.

The American version will be equipped with dual overhead instrumentation consoles, Recaro seats, Blaupunkt AM-FM radio, carpets, Cibie quartz-halogen headlights, fluorescent interior lighting and VIP steering wheel.

Auto output rises as 6 plants return

By Patricia Hoffman
Staff Writer

The return of six car assembly points plus daily and Saturday overtime at Ford Motor's Wixom facility helped boost last week's domestic auto production substantially from the previous week's total.

The auto makers scheduled 79,501 units last week, a gain of 51.75 percent from 52,389 the previous week, but down 21.33 percent from 101,054 the comparable 1981 week.

So far this year, the makers have finished 412,069 cars, down 39.76 percent from 684,008 the comparable period last year.

Eight General Motors, two Chrysler Corp., and six Ford Motor assembly points remained idle last week (Feb. 8). They were:

GM Framingham, Janesville, Lakewood, Lordstown, Oklahoma City, South Gate, Tarrytown and Wilmington; Chrysler Belvidere and Jefferson, and Ford Atlanta, Dearborn, Kansas City, Lorain, San Jose and Wayne.

American Motor's Kenosha facility resumed operations last week with a reduction in the daily line rate from 510 units to 310, on one shift.

Also returning last week were GM's Baltimore, Flint, Linden, and Tarrytown plants and Chrysler's St. Louis plant.

Ford's Wixom point worked two-hour daily overtime last week, plus eight-hours on Saturday (Feb. 13).

GM reported that due to the storm the week of Feb. 1, there was a one-day loss of one shift at all its Michigan and Missouri assembly points.

Downtime has been scheduled this week at GM's Framingham, Janesville, Lordstown, Oklahoma City, South Gate, Tarrytown and Wilmington facilities.

Truck output up despite downtime at Ford, Chrysler

Despite downtime at all Chrysler Corp. truck facilities and two Ford Motor points and a line-rate reduction at American Motors' Toledo (Jeep) plant, domestic truck production last week was well ahead of the previous week's output.

Last week, the truck makers targeted output at 36,029 units, up 52.56 percent from 23,617 the previous week, and up 8.90 percent from 33,085 the comparable 1981 week.

So far this year, the truck manufacturers have completed 186,847 units, a drop of 9.92 percent from 207,427 the comparable period last year.

Ford's Kansas City and San Jose truck facilities were both idle last week for inventory control.

Chrysler's Belvidere point was down last week for the last of a two-week shutdown, halting production of the Dodge Rampage.

Also idle last week was Chrysler's Warren truck facility. Operations are scheduled to resume today (Feb. 15).

AMC reduced the line rate at its Toledo (Jeep) facility last week, cutting output from 395 units a day on one shift to 350 units a day.

International Harvester's Ft. Wayne facility will be idle starting today. The point is slated to return March 1.

Auto production in Canada jumps 90 pct. for week

Operations at all but one car assembly point and Saturday overtime at Chrysler's Windsor plant, helped boost last week's Canadian auto production 90 percent from the previous week's total.

Last week's estimated car output of 17,268 units rose from the previous week's 9,088, and the total was also up substantially from 6,569 in the comparable 1981 week.

Year-to-date, the auto manufacturers have built 78,276 cars, a gain of 12.88 percent from 69,343 in the comparable period last year.

Truck production last week was targeted at 8,154 units, more than double the 4,039 built the previous week, but down 29.14 percent from 11,507 in the comparable 1981 week.

So far this year, the truck makers have finished 42,364 units, a drop of 32.71 percent from 62,956 in the same period last year.

General Motor's Oshawa (No. One) car facility returned last week (Feb. 8) after being idle two week's for inventory control. The point is scheduled to go down again today (Feb. 15) for another two weeks of inventory adjustments.

Also back last week was Ford Motor's Oakville car point. The facility was idle due to heavy inventories.

Chrysler's Windsor car and truck facilities returned to normal operations last week after production was halted for two days the previous week due to a storm. Both shifts at each facility worked Saturday (Feb. 13) to make up for the loss of production.

Ford's St. Thomas car point and Oakville truck facility remain idle this week (Feb. 15) for the last of a three-week shutdown to control inventories.

EPA grants NOx waivers to seven more diesel users

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—Ruling that technology does not yet exist for diesel-powered vehicles to meet the statutory oxides of nitrogen standard of 1 gram per mile, the EPA has decided to grant waivers from the standard to seven more diesel users.

Such waivers, to a level of up to 1.5 grams per mile NOx, are available through the 1984 model year under provisions of the Clean Air Act amendments of 1977.

Receiving waivers were:

1. BMW, for its innovative 2.4-liter turbo diesel (effective the 1984 model year and up to 1.5 gpm).

2. Chrysler, for a 1.9-liter naturally aspirated diesel it will buy from Peugeot in 1984 (again to the 1.5-gpm level).

3. Ford, for the 2.4-liter turbo diesel it will buy from BMW in 1984 (also to the 1.5-liter gpm level).

4. Peugeot, for its XD2S/XD3S turbo diesels, its 2.3-liter naturally aspirated diesel and a new 1.9-liter naturally aspirated diesel it will offer in 1984 (the level is 1.5 gpm and is effective for the 1983 and 1984 model years).

5. Volkswagen, for turbocharged and naturally aspirated versions of its 1.6-liter and 2.0-liter diesel engines (for the 1.6-liter engine the waiver is to 1.3 gpm and 1.4 gpm depending upon whether it goes in the 2,250 GVW chassis or the 2,500/2,750 GVW chassis; the 2-liter engine gets the waiver to the 1.5-gpm limit).

6. Volvo, for naturally aspirated and turbocharged versions of the in-line 2.4-liter six-cylinder diesel it buys from Volkswagen (the limit is 1.5 gpm for the 1983 and 1984 model years).

7. Vehicle Technology, Inc., a New York firm that wants to put Italian-built VM diesel engines in Ford vehicles for use as taxis and in the Mark VI for personal use. The engines are turbocharged 2.2 and 3.6-liter models. The waiver is to the 1.5-gpm level and is effective from 1981 through the 1983 model year. These engines are the same as those Jaguar plans to use.

Previously, EPA granted waivers to General Motors, Mercedes-Benz, Nissan, Isuzu, Renault and BL Cars, Ltd., for various of their diesel models through the 1984 model year.

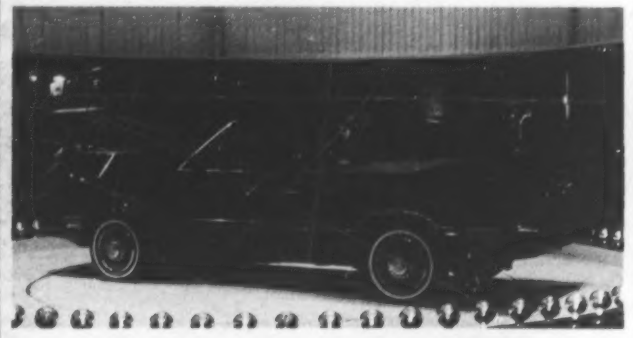
Ragtop revival

Spring brings Riviera convertible

The convertible is back and domestic auto makers are hoping the allure of open-air motoring will thaw out stubborn buyers as the spring selling season approaches. In addition to the Buick Riviera and others shown on this page, Ford Motor Co. is readying a ragtop Mustang for summer introduction. The Buick Riviera convertible goes on sale April 15. The Riviera's glass rear window folds away with the power top. Estimated price is below $25,000. About 500 Riviera convertibles will be built through the '82 model year.

Cavalier convertible in the works

This Chevrolet Cavalier convertible was originally built and shown as a concept car but former General Manager Robert Lund confirmed that Chevy will build a version of it, perhaps late in the year. The show car features a power top, plexiglass-covered headlights, the new 2.0-liter inline four-cylinder engine and a five-speed transmission.



Jim Piegue photos

LeBaron flips its lid

Chrysler LeBaron (shown) and Dodge 400 convertibles are scheduled to bow in mid-April. The LeBaron/400 convertible has four-passenger seating and power-top with a zip-out rear window. Chrysler has the capacity to build up to 12,500 convertibles through the model year. The last domestic-built convertible car was the 1976 Cadillac Eldorad

Is there pent-up demand? Many factors cloud issue

By Edward Lapham
Financial Editor

More than at any time in recent automotive history, pricing and the pricing policy of the domestic auto makers are an important topic.

The recent flurry of rebates by all the domestic producers suggests that they, too, realize the price sensitivity of the current U. S. auto market.

There is some question, however, about the long-term value of rebates: Do they merely steal sales from the future or can they actually be used to stimulate a recovery back to a "normal" sales trend line?

Those market analysts who believe, or hope, that rebates will stimulate a real recovery generally accept two basic facts. First, they believe that U. S.-made cars really aren't all that overpriced. They also believe that there is a massive pent-up demand for automobiles just waiting to explode like an overripe melon.

On the first assumption, there is some evidence that there is at least some element of truth.

Maryann Keller, vice president and auto analyst for Paine Webber Mitchell Hutchins, Inc., said she believes the overpricing discussion, involving so - called "sticker shock" is really the perception by U. S. consumers that there is more value per dollar in imports.

She said, however, that because of domestic rebate programs plus sticker premiums and "phantom" options tacked on by import dealers, the transactional price of imports was actually higher than that of domestic makes in 1981.

Keller totally discounts the pent-up demand assumption.

"Income is the most important factor influencing sales," she said. "I don't think economic conditions in the U. S. for the next five years will allow fulfillment of pent-up demand."

• Even the NADA is leery of pent-up demand projections.

A February Automotive Executive Article prepared by the NADA Industry Analysis Division said "the idea of significant pent-up demand waiting to be unleashed is fiction."

The article did, however, say that sticker shock is real and that the market has become increasingly price sensitive.

"The public reaction to manufacturer incentive and rebate programs demonstrates this fact," the article said. "The strength of the used-car market provides additional evidence. As individuals have been priced out of the new-car market, they have increasingly entered the used-car market."

To provide some sort of empirical analysis without getting pulled too far to one side or the other of either controversy, AUTOMOTIVE NEWS asked a reputable economic analysis firm to provide some insight into the impact of pricing on the sales of large and small cars against the backdrop of the coming recovery.

The accompanying chart graphically depicts the results. The analysis assumes that there is some borrowing of future sales by rebate programs, a moderate recovery rate for the economy and that, generally, smaller models will not pull out of the slump as quickly some of the larger models.

The analysis also assumes a positive impact from the mid-year tax cut, no strike by the UAW in the fall and moderate price elasticity.

In the first scenario, assuming no permanent price reduction for either large or small cars, there is a modest market upturn in the second half of the '82 model year, with a slightly faster recovery for large cars.

In the second scenario, which

Problems galore, but few solutions as NADA meets

By Robert M. Lienert
Editor

ATLANTA. — Members of NADA, gathered here for their 65th convention and exposition, are playing a reprise of last year's rather gloomy affair in Los Angeles.

It is doubtful whether at any time in those previous 64 conventions the outlook was any less rosy than it is right now. Problems that have bedeviled the industry in recent years have not been solved. Nor do they show any signs of going away.

Thus, the reprise. A year ago, the convention watchword was "survival." This year, the theme is still survival but that, of course, applies only to those that have survived so far.

Dominant issues for discussion here are the stagnant market, which appears to be resisting all efforts to revive sales; lofty sticker prices, which frighten potential customers, and sky-high interest rates, which chill the intentions of prospects who aren't driven away by the bottom line of the price stickers.

While inflation has doubtless shot some of the holes in the suffering market, it was not generally a convention topic.

• This is the first time NADA's annual extravaganza has been held in this bustling Southern metropolis. Southern hospitality lives up to its reputation and the convention facilities are first-rate, but dealers meeting here are caught up in a world of their own. Not of their own making or choosing, just their own burden.

Early registrations indicate that attendance will be about the same as last year's. About 10,000 persons, including 3,000 dealers, are expected to sign into this convention before it goes dark on Tuesday. NADA expects some last-minute, over-the-counter registrations, though not so many as last year in Los Angeles. More managers are expected this year.

Wendell H. Miller, who will turn over the president's gavel to George W. Lyles at Tuesday afternoon's general session, is expected to touch briefly on NADA programs and activities of the past year.

Miller last week, in referring to last year's convention, recalled that delegates had urged makers to roll back prices to

Viva, Bolero!

Mustang converted to two-seater

The Bolero, built by California Custom Coach, Pasadena, starts life as a Mustang, but evolves into a two-passenger, targa-top fiberglass-and-steel model that is expected to sell for under $18,000 when it goes on sale in mid-March. Powered by a 4-, 6- or 8-cylinder engine, production is forecast at several hundred per year. The Bolero is to be sold through Ford dealers only.

Dealer total drops 984 to 20,788 selling Big 3, AMC

By John K. Teahen Jr.
Managing Editor

The number of dealerships handling Big Three and American Motors cars declined by 984 during 1981, the annual AUTOMOTIVE NEWS census shows.

The four companies had a total of 20,788 retail outlets at the beginning of this year, compared with 21,772 on Jan. 1, 1981.

Last year was a bad one. Not as bad as 1980 when 1,607 outlets faded from the scene, but it still showed a severe loss.

In the last 20 years, there has been only one decline that was greater than those of 1980 and 1981. That was in 1966, when Studebaker withdrew from the auto business. The downturn was 1,856 that year.

For Jan. 1, 1982, Volkswagen is included in the domestic dealership total in the table accompanying this article. The total for the five U. S. companies is 21,680. Had VW been included a year ago, the count would have been 22,672 at the beginning of 1981. (Figures have been adjusted to reflect intercorporate duals.)

Prior to this year, Volkswagen has been included in the Automotive News Imported Car Dealership Census.

Last year, AMC and each of

UAW council OK's contract; would save Ford $1 billion

By Marjorie Sorge
Labor Editor

CHICAGO. — The UAW Ford Council has approved a new Ford contract for rank and file ratification. The contract offers the union workers guaranteed income and a 24-month moratorium on plant closings in exchange for more than $1 billion in concessions.

The 144 delegates attending the meeting here approved the contract by about 95 percent. UAW Vice President Donald Ephlin, director of the Ford Department, said the union hopes to have the rank-and-file vote wrapped up by Feb. 28 with the new agreement taking effect March 1.

Officials at both General Motors and Ford said the new agreement is designed to boost sales and save jobs.

That new pact also provides a profit-sharing agreement while asking for a nine-month freeze on cost-of-living adjustments (COLA) and no wage increases for the length of the 31-month agreement. It will expire Sept. 14, 1984.

There is an automatic reopener if sales reach a specified level.

In addition, Ford and the UAW have agreed to an experimental pilot plant where lifetime employment would be guaranteed for 80 percent of the workforce. The plan would be similar to those in Japan where 80 percent of the workers are permanent company employes and the other 20 percent are temporary and are laid off if times are tough.

No plants have yet been chosen for the pilot program, but UAW President Douglas A. Fraser said "there are a lot of volunteers."

The new contract also abolishes all paid personal holidays (PPH) six from the time the agreement takes effect until the end of 1982, and a extra paid bonus Sunday holiday in December.

There were no changes in the

breaking news

DeLorean enterprise stays afloat

LONDON. — John Z. DeLorean's sports car enterprise is still in business. Late last week, the Belfast-based car-making unit, DeLorean Motor Cars Ltd., went into voluntary receivership following a British Government decision to cut off funds. The plant will build cars under the guidance of receiver Sir Kenneth Cork. The U. S. firm, DeLorean Motor Co., was not affected and will continue to sell cars.

Ford asks suppliers to cut prices 2 pct.

DETROIT. — Ford Motor Co. is asking its suppliers to reduce their prices by 2 percent. General Motors made a similar request earlier this month. Ford asked that the rollback be applied to supplier billings from Feb. 1 to July 31.

See BREAKING NEWS, Page 8, Col. 1

Time names Strauss Quality Dealer of Year

ATLANTA. — Time Magazine has named Richard E. Strauss, president and general manager of Dick Strauss Ford, Inc., and Dick Strauss Isuzu, Richmond, Va., as the 1982 Time Magazine Quality Dealer of the Year.

He will serve as official national spokesman during the year for all 64 recipients of Time Magazine Quality Dealer Award (TMQDA) honors.

Strauss' award was announced Feb. 20 at the NADA convention in Atlanta. Strauss and the other winners received their awards at the opening business meeting of the NADA convention.

Strauss was one of 20 franchised new-car dealers named earlier by Time as TMQDA win-

Industry seminar scheduled Aug. 22-25

Smith to keynote World Congress

Roger B. Smith, chairman of General Motors, will deliver keynote remarks for the seventh annual Automotive News World Congress.

This leading industry seminar, a part of Automotive Week in Detroit this year, will be held Aug. 22-25 at the Westin Hotel (formerly the Detroit Plaza), site of the 1979 gathering in Detroit's Renaissance Center. It was at Dearborn's Hyatt Regency last year.

As part of Automotive Week, the Automotive News World Congress will run in tandem with Automotive News World Expo. The latter will be staged Aug. 24-27 at Detroit's main exhibition center, Cobo Hall.

Sites of the two events are conveniently located on Detroit's downtown waterfront.

Smith, as keynoter of the Automotive News World Congress, is expected to deliver a "state of the industry" report to those attending the opening of the 3½-day affair.

"This year's Automotive News World Congress has more of an international flavor than ever before," said Keith E. Crain, publisher and editorial director

But truck inventory climbs to 132

Import-car supply dips to 56 days

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. dipped a bit in January and stood at a 56½-day supply Feb. 1, down from a 60½-day stock a month earlier.

The decline in days supply was the result of both a decrease in the unit count and an increase in the sales pace during January.

The inventory of new imported pickup trucks jumped sharply during the month, however, to a 132-day supply, compared with a 108-day stockpile on Jan. 1.

The inventory of new imported vehicles Feb. 1 totaled 375,784 cars and 156,574 trucks, a combined 68-day supply, which was unchanged from a month earlier when the inventory included 383,228 cars and 133,256 trucks.

The Feb. 1 imported-car stockpile of 56½ days is close to the ideal for imports — if anything, a bit lean. At the same time, the Feb. 1 supply of U. S.-built new cars was still heavy at 97 days.

• A sales surge by Honda during January propelled it into second place among import deliveries for the month and also trimmed its inventory to a 22-day supply from its Jan. 1 level of 39 days.

Number one import seller Toyota was also in a very lean inventory position with only a 25-day supply, off from 26 days Jan. 1. Datsun was in the strongest inventory position of the leaders with a 76½-day supply, up from 67 days a month earlier.

Subaru had a 44-day supply of new cars Feb. 1, up from 36 days a month earlier. The 80-day supply of Mazdas was up slightly from 79 days on Jan. 1, while Isuzu's stockpile jumped to 100 days from 92 days.

Chrysler Corp. had a heavy 123-day supply of Mitsubishi-built cars on hand Feb. 1, which was actually down from 152 days a month earlier.

The combined inventory of Japanese-built new cars in the U. S. Feb. 1 totaled 268,131 units, a 49-day supply, down from a 52½-day stock Jan. 1.

The stockpile of West German-built new cars totaled 59,233, a 91½-day supply, up from 77 days a month earlier.

This included supplies of Mercedes-Benz good for 64 days; BMW, 66 days; Porsche, 78½ days, and German-built Volkswagens, 118 days. VW also had a 165-day supply of U. S.-built Rabbits and a 170-day supply of U. S.-built Rabbit pickup trucks.

Days-supply figures for imported pickup trucks in stock Feb. 1 were: Toyota, 92; Ford Courier, 113; Chrysler/Mitsubishi, 118; Chevrolet LUV, 148; Mazda, 165; Datsun, 181, and Isuzu, 194.

Electric Electrek bows

Unique Mobility, Englewood, Colo., introduced its Electrek—a $24,000 EV hatchback with 20 cubic feet of carrying capacity, but with a passenger seat that can be removed to bring total capacity to 35 cubic feet. First auto dealer to carry the hand-built car is Brooks Cadillac, Scottsdale, Ariz.

Dealers told of steps to meet competition from Mitsubishi

Chrysler outlines product and marketing plans

By Joseph Bohn
Marketing Editor

Chrysler recently outlined its future product plans, and some of its marketing strategy, to dealers.

It answered one puzzling question: Why step up Mitsubishi advertising and have Kenyon & Eckhardt staff up a big Los Angeles office after all these years, particularly when Mitsubishi is starting its own distribution channel?

As long as voluntary import quotas are in effect, Chrysler said, Mitsubishi's new dealers, who start selling at the beginning of the '83 model year, are limited to 2,500 units a month. But only if Chrysler sells the cars allocated to it.

If Chrysler sales are below the negotiated allocations, those allocations will go to Mitsubishi Motor Sales of America dealers, the company said.

"One of the major objectives of the Import Operations Group is to position Mitsubishi products as imports and the dealers who sell them as import dealers," Chrysler said. "The full thrust of Import Operations will be targeted at this objective," Chrysler said.

Chrysler also plans to focus Dodge dealers as its primary truck retailers, with future product plans.

Dodge dealers will get a new T-115 front-wheel-drive van from Mitsubishi as an exclusive, beginning in '84.

They will have both rear-wheel-drive Ram vans and wagons, as well as front-drive vans and wagons. Plymouth dealers are to get only the front-drive version of the passenger van, and it is to replace the current Voyager.

Chrysler took great care to explain, however, that these are its current plans. Given the topsy-turvy nature of the market, it could well continue additional rear-drive Plymouth models, if demand is there.

Vehicles that combine the qualities of a car and truck but are more car-like would be given Plymouth and Dodge dealers, Chrysler said.

Thus, Plymouth dealers will get a version of the Rampage, called Scamp, in '83.

Chrysler also said it was negotiating with Mitsubishi on a more competitive retail price for the imported D50 pickup truck.

• Chrysler noted that when the new Mitsubishi channel starts up in '83, MMSA and Dodge dealers, for example, would be competing in different market segments with different products.

MMSA dealers will have sporty two-door and conventional four-door compacts and a high-priced sports car.

Dodge dealers will continue to sell the high-volume Colt two-door and four-door models and the Challenger specialty model. Plymouth dealers will continue to sell Champ and Sapporo.

Chrysler's first diesel will be a 1.9-liter Peugeot-supplied diesel for the L-body Omni/Horizon in '84½.

In other future product changes, the company said:

1. The Dodge Ram's head ornament will become standard in '83 on all pickup truck series, except the low level pickup.

2. Luxury options, like a 60/40 seat, do not support the price-oriented, volume sales strategy for K cars, but a bucket seat center armrest would be available as an option on '83 K models.

3. A driver-controlled right hand remote mirror will be made available for LeBaron and Dodge 400.

4. The Aries/Reliant instrument panel will be upgraded to a fully padded level for '83.

5. A high-altitude 2.6-liter engine will be offered for '83 (along with the low-altitude version).

On advertising, Chrysler said:

1. It has been testing new engineering lines and expects to have an engineering theme ready shortly for advertising.

2. It will step up van advertising, but only regionally. Since vans are not a major product in certain areas of the country, increased van advertising will be regionalized and accomplished through improved advertising in major van markets.

Chrysler acknowledged that its announcement show for salesmen on '82 models (via Satellite) was too long and, in some cases, repetitous.

Future shows will be strictly motivational/announcement activities, and training sessions will be deleted, it said.

Extra day is the reason; no rebate surge noted

Early-month car sales inch upward

By Jenny L. King
Staff Writer

Early-February new-car sales responded only slightly to the most recent round of customer rebates. The total was up from its year-ago counterpart and the daily selling rate was best so far this year although it was down from the Feb. 1-10, 1981, average.

This year, dealers retailed 142,273 new U. S.-built units, up 4.96 percent from 135,554 the preceding year. The daily average was 15,808, down 6.70 percent from 16,944. There were nine selling days this year, eight last year.

General Motors and Chrysler Corp. were up on a year-to-year basis; everyone was down on the daily-rate scale. GM sales totaled 88,131, up 12.02 percent from 78,674 in 1981 (off 0.43 percent daily rate). Chrysler reported sales of 16,384, up 7.50 percent from 15.241 (down 4.47 percent daily rate).

Ford Motor Co. reported sales of 33,824 new cars, down 4.16 percent from 35,294 last year (down 14.82 percent daily rate). Volkswagen of America was down 51.15 percent, to 1,634 from 3,345 (down 56.49 percent daily rate). Estimated sales of American Motors passenger cars numbered 2,300, down 23.33 percent from 3,000 (down 31.72 percent daily rate).

GM earned 61.94 percent of the Feb. 1-10 market, up from 58.04 percent a year ago. Ford stood at 23.77 percent, down from 26.04 percent. Chrysler edged ahead to 11.52 percent from 11.24 percent. VWoA dropped to 1.15 percent from 2.47 percent, and AMC had an estimated 1.62 percent of the domestic total, down from 2.21 percent.

Seven domestic makes reported sales increases on a year-to-year basis. Chrysler was up 62.98 percent, Lincoln was up 56.79 percent, Buick was up 34.10 percent, Chevrolet was up 20.62 percent, Pontiac was up 20.29 percent, Cadillac was up 16.17 percent and Dodge was up 0.50 percent.

On the wrong side of breaking even were: VWoA, down 51.15 percent; Imperial, down 24.28 percent; AMC, down 23.33 percent; Oldsmobile, down 17.68 percent; Mercury, down 6.65 percent; Ford, down 6.54 percent, and Plymouth, down 4.14 percent.

Sales thrcugh Feb. 10 totaled 510,411, down 15.69 percent from 605,386 in 1981.

Nissan Sentra to lead gas-engine MPG race

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Look for a new leader in the fuel economy derby this year.

Taking over from Honda in the gasoline-powered passenger-car category will be Nissan's Sentra, the replacement for the Datsun 210.

EPA testing indicates the vehicle will deliver 43 miles per gallon in city driving and an impressive 58 MPG in highway driving.

Honda's Civic FE previously held the mileage crown for gasoline-powered vehicles with 41 MPG City and 55 MPG highway numbers.

The Sentra is a front-wheel-drive, five-passenger model powered by a 1.5-liter four-cylinder engine mated to either a four- or five-speed manual transmission or an automatic.

To get the 43 MPG city number, however, the vehicle would need to be ordered with the five-speed transmission and the feedback fuel system similar to that used on GM's vehicles.

In the more conventional trim the Sentra will deliver mileage in the 35 MPG range for city driving and the high 40s for highway driving.

• Having knocked off Honda, Nissan will also take aim at the alltime mileage leader, Volkswagen Rabbit diesel.

In 1983 it will offer for sale a dieselized version of the car powered by a 1.8-liter diesel that is expected to equal or better the 47 MPG city number the diesel Rabbit now offers.

A "go, no go" decision awaits final word from EPA, however, as the vehicle needs a waiver from the oxides of nitrogen standard if it is to sell here. EPA has indicated such a waiver is in the offing.

Fuel economy is not the sales hook it used to be but is still important. Nissan, seeking to catch import leader Toyota, would appear to be going after every potential.

1981 dip is less than 1,607 in 1980

Dealer total down 984 for Big 3 and AMC

Continued from Page 1

the Big Three saw their dealer totals decline. For Chrysler Corp. and Ford Motor Co., the 1981 dips were much lighter than in 1980. GM and AMC lost more outlets in 1981 than they did the previous year.

For 1981, the falloffs amounted to 405 for GM, 276 for Ford Motor, 139 for Chrysler Corp. and 116 for AMC. That's a total of 936. A change in the number of intercorporate duals raised the aggregate figure to 984 for the four companies.

By comparison, the 1980 losses were 365 for GM, 553 for Ford, 596 for Chrysler and 38 for AMC. That total of 1,552 became 1,607 after adjusting for the change in intercorporate duals.

Thus, Ford cut its loss in half in 1981, while Chrysler's drop was less than one-fourth as heavy as it was the previous year.

• Volkswagen is not included in the above comparisons for the domestic industry, but its dealer totals are interesting. VW was amazingly steady during a difficult year. There were 1,006 VW outlets at the beginning of 1982, down only 12 from 1,018 a year earlier.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

Last year was the 26th consecutive year that the domestic dealership total has declined. The count was 41,018 at the beginning of 1956. The dip to today's 21,680 (including VW) represents a drop of 47.15 percent.

An especially discouraging note in the 1981 picture is the fact that the dealership decline was greater in the second half than in the first. In 1980, the mortality tapered off a bit in the second half.

The fourth quarter of 1980 saw the smallest decline of the year. The fourth quarter of 1981 brought the largest decline of the year.

For AMC and the Big Three, the first quarter dip amounted to 221 dealerships. The toll dropped to 104 in the second quarter for a first-half loss of 325.

The second quarter was a good omen, but the favorable situation did not continue. The dropoff jumped to 260 in the third quarter and to 399 in the fourth. The second-half regression was 659 dealerships, making the full-year loss 984.

Following are the quarter-by-quarter aggregate totals for the four companies during 1981:

Jan., 1981	21,772
April 1, 1981	21,551
July 1, 1981	21,447
Oct. 1, 1981	21,187
Jan. 1, 1982	20,788

It's hardly necessary to dwell on the reasons for the decline in the number of dealerships. Dealers are an integral part of the auto industry and they are sharing in the sorry state of the industry. Depressed sales and nonexistent profits are every bit as apparent at the retail level as they are at the factory level.

• A check of Big Three franchise totals finds that all GM and Ford Motor makes were down for the year, while three of the four Chrysler Corp. lines were up.

Chevrolet and Ford, the industry's two largest dealer organizations, suffered the greatest declines during 1981. Chevrolet was down 245, and Ford was off 236. In each case, most of the dropouts were single-line outlets.

Elsewhere at GM, there were dips of 75 franchises for Pontiac, 60 for Oldsmobile, 35 for Buick and 10 for Cadillac. At Ford Motor, Mercury had a slip of 53, and Lincoln was off 12.

Dodge posted a gain of 102 franchises for the year, and there were advances of 55 for Plymouth and 10 for Imperial. Franchises for the Chrysler nameplate were down by 29.

The gain in franchises coupled with the decline in the number of dealerships means that Chrysler Corp. is doing more dualing among its four car lines.

Chrysler Corp. opened 1981 with 3,823 car dealerships and wound up with 3,684, a dip of 139 for the year. It was a far better performance than in 1980 when the corporation's loss was 596 outlets.

After losing 51 locations in the first quarter, Chrysler posted a gain of 10 in the April-June period. It was the only quarterly upswing of the year in the domestic industry.

The second half was not as kind to the company, however, with quarterly dips of 42 and 56. By comparison, the quarterly losses in 1980 were 152-261-135-45.

*—Volkswagen was included in the Automotive News Imported-Car Dealer Census for Jan. 1, 1981. If VW had been included in the domestic total at that time, the domestic total would have been 22,672 on Jan. 1, 1981.

Copyright, 1982, Automotive News

Year-end franchise totals were Chrysler, 2,639; Plymouth, 2,537; Dodge, 2,453, and Imperial, 421.

In addition to its 3,684 car dealerships, Chrysler Corp. has nine that handle only Dodge trucks. They are not included in the corporation's car-dealership total or in the Dodge car-franchise total.

For Ford Motor Co., each quarter of 1981 showed a smaller loss in outlets than the corresponding period of 1981. The quarterly dips last year were 63-78-100-35, compared with the year-earlier figures of 97-234-181-41.

For the year, Ford's decline was 276 vs. 553 in 1980. Ford Motor had 5,685 car dealers at the beginning of 1982, down from 5,961 as 1981 began.

Franchise totals for Jan. 1, 1982, were Ford, 4,834; Mercury, 2,663, and Lincoln, 1,465.

There are 94 dealerships that handle only Ford heavy-duty trucks. They are not included in the company's car-dealership figure or in Ford Division's car-dealership count.

General Motors had a decline of 405 car dealerships during 1981. Its year-end total was 10,655, down from 11,060 at the beginning of the year.

By quarter, GM's dips were 55-80-120-150. In 1980, GM had a decline of 365 outlets on quarterly downturns of 30-155-105-75.

Franchise totals for the GM makes at the beginning of this year were Chevrolet, 5,430; Oldsmobile, 3,190; Pontiac, 3,040; Buick, 2,950, and Cadillac, 1,595.

American Motors had a lighter loss than any of the Big Three last year, but its dip of 116 outlets was three times as heavy as its 1980 decline of 38. Quarterly declines for AMC in 1981 were 17-11-43-45. The dealer count was 1,547 on Jan. 1, compared with 1,663 a year earlier.

AMC had 737 duals with Big Three makes of cars at the beginning of 1982 (a couple also have VW), compared with 706 a year ago. AMC also is twinned with Volkswagen in 38 other stores.

As noted Volkswagen fared best of the domestic manufacturers in dealer retention last year. It was down only 12, to 1,006 from 1,018 at the beginning of 1981. VW has an estimated 76 duals with Big Three makes plus the 38 with AMC.

In the table accompanying this article, all AMC and VW dealerships are listed under the heading "Exclusives within corporation." This is because each company produces only one line of domestic cars.

Both AMC and VW have many duals with each other and with Big Three makes (as detailed above). AMC also has hundreds of duals with Renault, and VW has 226 with Porsche and Audi and about 300 more with other imports. But looking only at their domestic products, all AMC and VW outlets are exclusives within their own corporations.

The same explanation applies to the Big Three exclusives. They may also handle a line produced by another domestic corporation or they may handle an import, but "exclusive" means they carry only one line of domestic cars manufactured by their corporation.

Option bargains on Rabbits and pickups

VW begins its Black Tie discounts

By Joseph Bohn
Marketing Editor

Volkswagen's new "Black Tie" celebration, with specially equipped and discounted Rabbits and pickups featured alongside the new Quantum and Scirroco, begins today (Feb. 22).

It will dominate VW advertising to April and include a big multi-media effort in TV, newspaper and magazine, as well as a big direct-mail program, full in-dealership merchandising kits and trip contests for sales managers and salespeople.

The promotion is an effort to set VW apart from competitors who are simply offering big discounts and rebates, said Charles R. Hughes, newly named manager, VW marketing services. Hughes, former manager, Porsche Audi marketing, handles VW advertising and used car merchandising and auto shows.

"We wanted to inject some positiveness . . . some good news to intrigue the consumer . . . to offer more than just another rebate," Hughes said.

VW is offering factory-paid rebates of $350 on the Rabbit and pickup. But they won't be part of the national ad program. And rebate Rabbits and pickups won't be eligible for the Black Tie packages.

Black Tie models will offer various extra cost items, such as five-speed manual, larger tires and rims, special black bumpers and interior items and trim, for $200 on a package valued at $350. There are some small equipment variances between the Rabbit and pickup models.

Ads kick off in TV and newspaper Feb. 22. TV consists of network and spot. An average of 150 Gross Rating Points of network will run each week, with variances, backed by 200 GRPs of spot in 42 markets, Hughes said.

• Newspaper on Feb. 22 will run with full-page ads in 62 markets, plus a followup Wall Street Journal ad Feb. 26 and two smaller ads running in limited markets the weeks of March 1 and March 8.

Additionally, early-March editions of Time, Newsweek, U. S. News, Sports Illustrated and New Yorker will carry black-and-white pages.

VW will supplement its advertising with a direct mailing to one million VW owners, featuring the full line of its vehicles, as well as Black Tie models.

And dealers will receive full merchandising kits, such as window banners, car toppers, and even new price stickers on Black Tie models.

"The dealers are enthused," said Hughes, who was holding meetings last week. "And we want to get the public enthused with our celebration of new models and limited edition models."

VW is running a sales managers contest from Feb. 11 to April 30, in which 150 trips for two will be awarded to Maui, Hawaii, for a five-day/four night stay. Sales managers will compete in groups based on unit sales objectives.

At the same time, VW is also running a contest for salespeople in which 300 trips will be awarded for Caribbean cruises, based on group competition toward unit objectives.

Doyle Dane Bernbach, New York, is VW's agency.

Industry sales in January up 7.5 percent

Franchised dealers and factory outlets in the U. S. retailed 179,085 new trucks of all types in January, an increase of 7.5 percent over the year-earlier 166,579, according to preliminary reports.

Sales were up in two of the three market segments for the first month of 1982—the lights and heavies — and were down sharply in the medium category.

In January, dealers retailed 163,662 light trucks — including 17,650 non - captive Japanese compact pickups—an increase of 10.8 percent over the previous year's 147,699. The 1981 total included 17,598 Japanese units.

Sales of heavy trucks during the month were 3.9 percent higher than last year, rising from 12,043 to 12,507 units.

Mediums dropped from 6,837 sales in the first month of 1981 to only 2,916 units this year, a decline of 57.3 percent.

January sales were higher in all three light-truck classes and Class 7 of the heavy segment. They were down in two of the three medium classes—five and six—and in the heavy's Class 8. There were no sales in Class 4 this year or last.

Sales of compact pickups during the month, domestic and imports, totaled 44,871 units, a

Kaine to be keynoter at fleet-chief parley

CHICAGO. — J. Patrick Kaine, president, International Harvester's Truck Group, will deliver the keynote address at the Private Truck Council of America's 43rd annual meeting at the downtown Hyatt Regency Hotel here April 14.

Reece Taylor, Interstate Commerce Commission chairman, will be the featured speaker at the three-day meeting for managers of private fleets.

Holmes mounts wrecker on IVECO chassis

A Holmes Commander Model 1200 fully hydraulic wrecker is being mounted on an Italian-built IVECO Z-100 diesel-powered chassis for recovering and towing cars and light trucks. The engine is a five-cylinder, air-cooled Deutz diesel. The wrecker unit, with a basic power capacity rating of seven tons, features two five-ton winches designed and manufactured by Holmes.

Rockwell reorganizes field sales, marketing

TROY, Mich. — A new approach, designed to improve service to North American fleet and dealer customers, is under way at Rockwell International's Automotive Operations.

"Our goal is to develop closer contacts and better working relationships with our customers, and to provide better and faster response to customer needs," said James F. Lambert, vice president of Rockwell's recently reorganized North American field sales and marketing organization.

"We plan to accomplish this through a new regional arrangement which places customer-service management and decision-making in the field, closer to truck fleets and dealers and not at the home office," he said.

He added that while regionalization is not a new term to the industry, Rockwell's approach to the concept is a complete change from the way it traditionally dealt with this important customer group.

"In the past, the field sales and service teams functioned independently, reporting to separate management groups based in Troy," said Halden L. Booth, newly appointed director of field operations.

"Under the new arrangement," he said, "we are establishing six regional offices, each headed by a regional manager with direct

Record '81 production tops previous high by 25 pct.

Toyota truck-bed output peaks

TORRANCE, Calif.—A shift to the "just-in-time" system of parts supply and the results of a $25 million expansion and improvement program helped Toyota's California truck bed plant set a production record in 1981, according to Toyota Motor Sales, U.S.A., Inc.

The plant and its more than 400 employes produced about 130,000 Toyota pickup-truck beds during the year, an increase of nearly 25 percent over the previous high set in 1979.

The expansion and improvement program, completed in late 1980, increased the plant's production area by about 50 percent, bringing total production area to about 300,000 square feet and Toyota's total investment in the facility to more than $50 million.

"The program increased assembly-line automation and efficiency," said Donald V. Haller, general manager of Toyota Motor Mfg. (TMM), U.S.A., Inc. "Paint operations also were greatly improved."

• Haller said the adaptation of the "just-in-time" method of parts supply also contributed to the increased production.

The method, basically, calls for the right number of the more than 150 separate parts used in the truck bed assembly to be delivered to the right location on the assembly line at the right time, Haller said.

The system links TMM's highly specialized production and assembly buildings to a single coordinated production schedule, he added.

"Of course our demands and requirements are on a smaller scale than a complete auto assembly plant," Haller said, "but even on a limited basis, the 'just-in-time' principle helped us eliminate the problems caused by over-inventory and allowed us to make immediate ad-

Toyota's new oval tube bumper

A new oval tube bumper, designed to increase side-to-side and ground clearance over conventional box - type bumpers, is available at all of Toyota's nearly 1,100 pickup-truck dealers in the U. S. Applicable to 1980-82 model 4x2 and 4x4 compact models, the bumper is made of aluminum, is offered in black and chrome and features an integrated step grip.

Redesigning products to meet demand

Kenworth sees big gain in Class 8 sales in 1983

By Roger Rowand

PHOENIX. — With an eye on an upcoming revitalization of the heavy-truck market, Kenworth Truck Co. is positioning itself with a redesigned product line.

First of the newly redesigned Kenworths to be introduced late this spring will be the W900 conventional because that configuration is going to be the sales leader in the years ahead, the company said.

In 1981, some 65 percent of the trucks sold in the U. S. were conventionals, the firm noted, and Kenworth expects that share of market to grow to 80 percent by 1985 as more states go to 60-foot overall length laws.

The W900 fits neatly into the 60-foot limit with trailer lengths averaging 45 feet, said Michael O'Byrne, general manager.

The Kenworth official said his company believes retail sales of Class 8 trucks bottomed out in 1981. There will be a gradual pickup through 1982-83, but then the sales curve will turn upward dramatically, O'Byrne said.

This is the heavy-truck sales picture as seen by Kenworth:

Class 8 sales	
1981	100,000
1982	104,000
1983	139,000
1984	170,000
1985	170,000 plus

O'Byrne's remarks came here at a media conference and introduction of the W900.

Kenworth executives said the price of the W900 has not been raised. Price stability has been maintained in spite of the fact several items that were optional have been made standard and the warranty has been upgraded, they said.

For example, 100 percent coverage has been extended to 25,000 miles from 10,000 miles, and frame coverage has been increased to five years or 50,000 miles.

Kenworth now has 140 dealers and soon will have its products sold exclusively through independent dealerships. It is closing the sale of its last com-

'84 debut slated for Chrysler's compact FWD van

BLOOMFIELD, Mich. — An all-new compact, front - wheel-drive van, which Chrysler Corp. has had in the works for more than a year, will be introduced as a 1984 model, according to Joseph Campana, general manager, Chrysler Truck Operations.

The vehicle, called the T115, "will fill the bill for those who want car-like ride and comfort in a seven-passenger vehicle—a vehicle that has all the features of today's full-size wagons, plus the advanced technology that offers 25 miles per gallon in fuel economy," he told the Detroit SAE Section here.

The van also will be offered as a van for commercial and recreational purposes.

Chrysler recently added two new models to its line of compact pickups—a 4x4 version of the Japanese-built Dodge Ram 50 and the domestically produced, all-new Dodge Rampage, a sporty truck based on the front - wheel - drive Omni 024 chassis.

Eaton opens sophisticated gear lab

The tiny feeler gauge of this high-precision measuring instrument can detect minute variations on the surface of gear teeth. The device is one of several sophisticated new machines at Eaton Corp.'s new truck-axle gear lab in Cleveland. It is used to design and develop high-precision gearing for quieter, longer-lasting medium and heavy-truck axles.

Redesigning products to meet demand

Kenworth sees big gain in Class 8 sales in 1983

Continued from Page 12

pany store—in St. Louis—within 90 days. Earlier this month, it sold its Omaha company-owned point.

Another phase of the truck business in which Kenworth is predicting rapid growth is leasing, O'Byrne said.

The company has a leasing arm, the one-year-old PacLease franchise operation. However, the firm does no direct leasing and offers no discount to fleet buyers.

"We've thrown our hat into the dealer's court," O'Byrne said. "You can't bypass your dealers once you've made that commitment. We sell to leasing companies only through our dealers."

Of leasing, O'Byrne said "It's a very tough business. We can hand them the package, but they've got to go out and do it."

• Fleet business has risen rapidly to 65 percent of the firm's sales in 1981 from just 30 percent in 1965, he said.

Contrary to a popular notion, Kenworth sales recently have been greater east of the Mississippi than in the West.

Its retailers are served by five warehouses in the U. S. and two in Canada. There are three manufacturing plants in the U. S., two in Canada, one in Mexico and one in Australia.

A husky 15 percent of sales are made overseas, O'Byrne said. One reason for that strength abroad is Kenworth's deep penetration in worldwide oil-field sales, he said.

Within a couple of months, PACCAR, parent of Kenworth and Peterbilt Truck Co., will open a test center in Skagit Valley, Wash., about 80 miles north of Seattle.

That facility will include a durability track, high-speed track, hills, skid pads, laboratories and 10 drive-through bays. Both truck makers will share test-center services.

Kenworth expects its spending on advertising this year to reach a record high. The kick-off for the W900 will be in March with fold-out in magazine spreads. That will be followed by the usual Kenworth testimonial advertising quoting initial purchasers or those who used prototype vehicles.

Part of this year's promotional activities will be a show-going trailer carrying the Kenworth story and a fully restored 1932 Kenworth truck.

McKenzie, Donnelson join Mitsubishi

FOUNTAIN VALLEY, Calif. —Mitsubishi Motor Sales of America, Inc., has appointed David B. McKenzie as director of service and Richard Donnelson as service training manager.

McKenzie joins MMSA after serving more than 11 years with Nissan, where he was most recently national consumer relations manager. Donnelson also comes to MMSA from Nissan, after working since 1976 in both parts and service training functions.

Auto suppliers in Detroit area get assistance

Continued from Page 174

house where business retention teams, composed of retired business executives, will contact firms and begin interviews, then follow up as requested by owners of firms accepting assistance.

7. Setting up "lending pools" to service suppliers with financial assistance and augment private lending with Small Business Administration and Industrial Revenue Bond financing.

8. Coordination with regional and state, city and township programs to expand industrial-commercial activity.

• According to Harbour, Wayne County's 1,336 automotive plants and offices employed 291,630 workers in 1978. He estimated employment currently at just over 190,000, some 101,000 or 35 percent less than four years ago.

He said auto makers in the U. S. have programs under way to substantially reduce their raw and in-process inventories.

"In the U. S. we've always been taught that mass production requires massive inventories," Harbour said. "But Japanese auto makers have all but destroyed our production system by producing 11 million vehicles with minimum inventories. They operate their mass production facilities with a minimum of two hours and a maximum of two days in-process inventory. The Japanese achieve in-process inventory turnovers in excess of 200 times a year, while the U. S. industry averages 10 a year."

Harbour said North American auto makers may not be able to reduce their in-process inventories to the same extent as the Japanese, "because our supply plants are widely dispersed and can't be easily relocated."

But he added that domestic auto makers' adoption of "just-in-time" type production systems will substantially reduce

NO LEADING IMPORT IS HIGHER THAN SUBARU IN OWNER LOYALTY.

Subaru owners have a lot in common. Including the habit of trading in one Subaru for another Subaru.*

If that isn't the best endorsement any car can earn, we don't know what is.

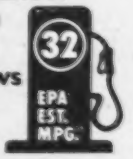
One good reason people stick with Subaru is for its day in, day out reliability. The last time Road and Track surveyed Subaru owners, they reported "... one of the most trouble-free cars we ever surveyed."**

Another reason is the wide choice of models. There's the sporty 2-door hardtop. The luxurious 4-door sedan. The versatile hatchback. And the roomy station wagon.

Every Subaru has full-time front wheel drive. In addition, three of our models — Hatchback, Station Wagon, Brat — are also available with *On Demand* Four Wheel Drive. Which is four wheel drive at the flick of a lever. Without stopping.

(Any other 4 wheeler around requires a full stop before switching. And stopping is exactly what you can't do sometimes.)

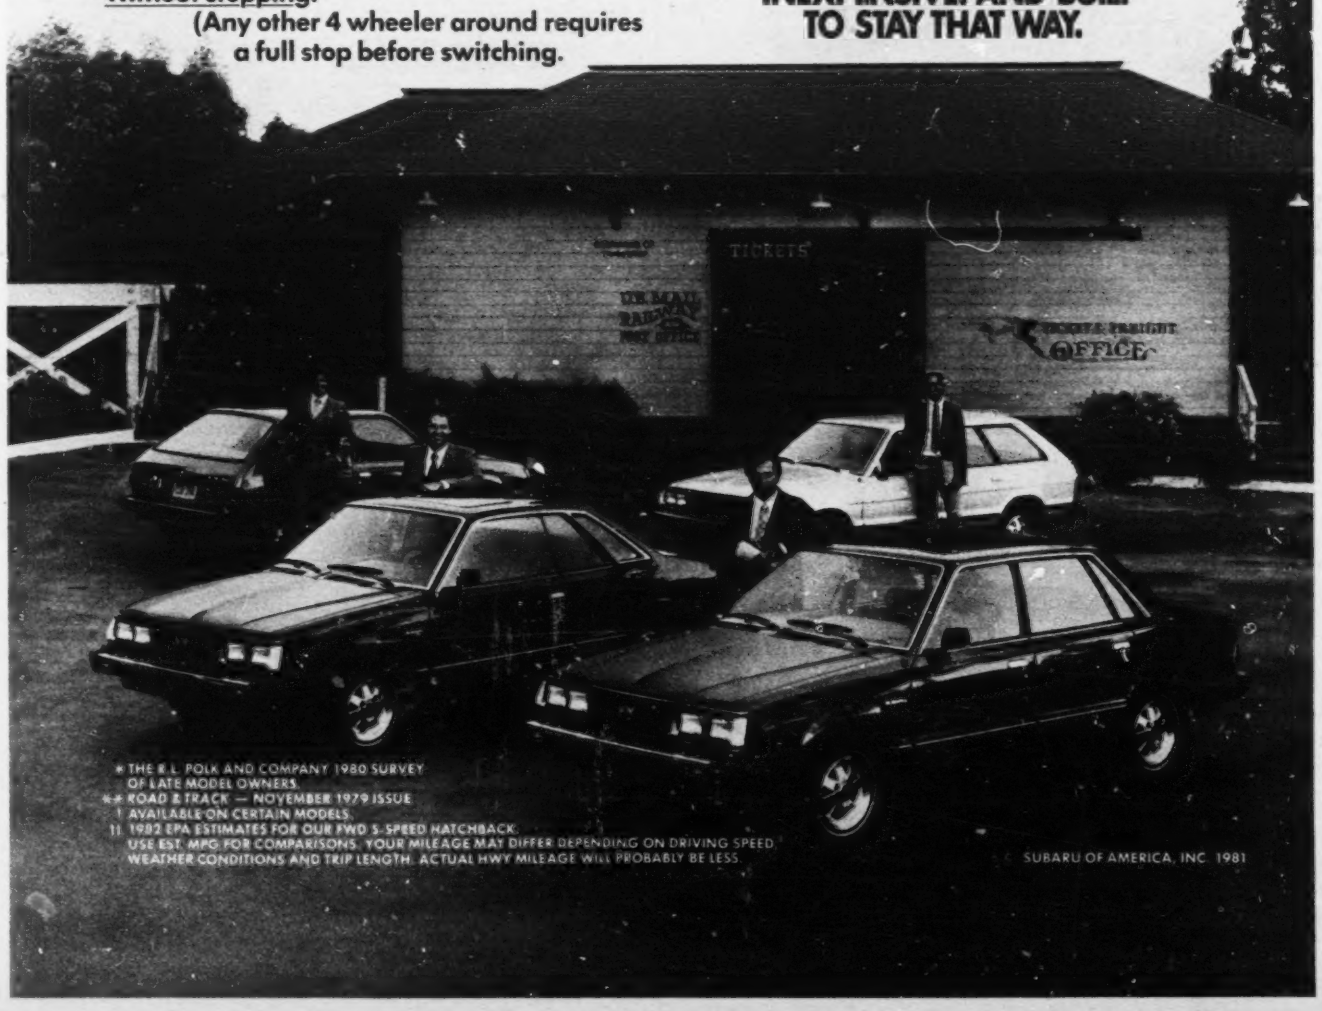
Some attractive options we offer are the Hill-Holder™ (a device on our manual transmission models† that keeps you from drifting back after stopping on steep hills), as well as power windows and power steering, AM/FM stereo, cassette deck, cruise control. All the wonderful unnecessities of driving.



Plus one huge necessity: outstanding gas mileage. Our cars are designed to squeeze every last mile out of every last drop. Year after year.

Just remember that it's quite easy to find an inexpensive car. The trick is to find one that stays that way.

SUBARU®
INEXPENSIVE. AND BUILT TO STAY THAT WAY.



* THE R. L. POLK AND COMPANY 1980 SURVEY OF LATE MODEL OWNERS.
** ROAD & TRACK — NOVEMBER 1979 ISSUE.
† AVAILABLE ON CERTAIN MODELS.
†† 1982 EPA ESTIMATES FOR OUR FWD 5-SPEED HATCHBACK. USE EST. MPG FOR COMPARISONS. YOUR MILEAGE MAY DIFFER DEPENDING ON DRIVING SPEED, WEATHER CONDITIONS AND TRIP LENGTH. ACTUAL HWY MILEAGE WILL PROBABLY BE LESS.

All-time high vehicle sales in Australia

Motor vehicle sales in calender year 1981 reached an all-time high for Australia.

Sales of 606,284 passenger and commercial vehicles topped the previous record established in 1976 and were 5.4 percent above 1980 figures.

Some industry analysts believe 1982 will see a further increase in sales, despite the world recession.

General Motors Holden led the industry with sales of 134,266 units, some 10,000 more than Ford. Toyota was third with 93,131 units, Nissan fourth, Mitsubishi fifth and Mazda sixth.

Nissan enjoyed its best year in Australia. The company's light-commercial vehicles recorded a 16 percent increase over its previous best year.

Australian Motor Industries, the Toyota subsidiary, is aiming to make the new Corolla Australia's top-selling small car. The new rear-drive Corolla is longer, wider and roomier than its predecessor.

Combined sales of Datsun passenger and commercial vehicles have grown from 58,200 units in 1979 to 78,500 in 1981.

The Datsun Bluebird contributed substantially to the rise, with a 32 percent rise in monthly sales during 1981. Datsun passenger car sales in 1981 equaled the firm's previous record set in 1978, with just over 56,000 units retailed by the company's distributors.

Australia's 1981 record market was a surprise in view of labor disputes which had plagued the industry. GM Holden reported there were only five days throughout the year when its operations were not affected by external industrial disputes.

Ford had consistently outsold GM, but a six-week-long strike prevented Ford from gaining market leadership for the full year.

Total Australian industrial sales of light commercial vehicles and trucks were the highest ever last year, with a 22.1 percent increase over 1980.

The nation's top-selling model was the Holden Commodore, followed by Ford Falcon, Mitsubishi Sigma, Datsun Bluebird, Holden Gemini, Ford Laser and Toyota Corona.

Sales are up, profits down at Renault

Last year was the toughest since the fuel crisis of 1974, according to one of Europe's most successful car makers.

Renault was reviewing a year in which its production volume dropped by 11.8 percent from the record 2 million of 1980. At the same time it expects profits to be substantially lower than 1980's $120 million.

"The decline in volume, the intensification of competition due notably to the effects of exchange rates and a big increase in financial costs, entailed a decline in the level of results which the first quarter did not see," reports the French company.

Group sales will be around $14.6 billion, a rise of seven percent over 1980. Car division sales rose by a similar amount to around $9.1 billion. Definitive consolidated accounts will not be available until May.

Renault's worldwide production last year amounted to 1,811,626 units, with 84 percent made in France. The company reports it held its place as No. 1 French producer.

In France, Renault accounted for 40.2 percent of the private car and light commercial vehicle market (up to five tons) with 853,517 units.

Through the end of November last year, Renault claimed a leading share of the EEC (13.4 percent) and 13.5 percent of the Western Europe market as a whole.

Florida, Texas, Colorado on top

Study rates states' business climates

CHICAGO. — Florida, Texas and Colorado — in that order — head the list of states with the best general manufacturing business climates among the 48 contiguous United States in 1981, according to a study by Alexander Grant & Co., an accounting firm based here.

The other seven states in the top 10, in order, are Kansas, North Dakota, Mississippi, New Mexico, Arizona, Louisiana and Georgia.

Of the 10 top states, eight are in the south or southwestern areas of the U. S. The bottom three states were Rhode Island, New York and West Virginia.

Grant's study, done in cooperation with the Conference of State Manufacturers' Assns. (COSMA), was an expanded update of similar studies conducted in 1979 and 1980. The 1981 study departed from the previous two in the number of factors covered and in the methods in which they were weighed.

The 1981 study examined 22 factors in five categories: State and local government fiscal policies; state-regulated employment costs; labor costs; availability and productivity of labor force; other manufacturing related issues.

• Here is a summary, by category, of the 22 factors and the states ranked by Alexander Grant & Co. as having the best score and the worst score for each factor:

State and local taxes per $1,000 of personal income — Indiana, best; New York, worst.

Percentage change over three years in state and local taxes per $1,000 of personal income — California, best; New Mexico, worst.

State and local government general expenditure growth over three years versus state and local government general revenue growth over three years — Delaware, best; Kentucky, worst.

State and local government debt per capita—Idaho, best; Nebraska, worst.

State and local government public welfare expenditure per capita — Arizona, best; New York, worst.

Average unemployment compensation benefits paid per covered worker per year — Texas, best; New Jersey, worst.

Net worth of state unemployment compensation trust fund per covered worker—Wyoming, best; Connecticut, worst.

Maximum weekly payment for temporary total disability under workers' compensation insurance — Mississippi, best; Iowa, worst.

Average workers' compensation insurance rate, per $100 of payroll, of selected manufacturing occupations—North Dakota, best; Michigan, worst.

Annual average hourly manufacturing wage — North Carolina, best; Michigan, worst.

Percentage change over three years in annual average hourly manufacturing wage — North Dakota, best; Oklahoma, worst.

Non-agricultural labor union membership per 100 non-agricultural workers—North Carolina, best; New York, worst.

Percentage change over two years in non-agricultural labor union membership per 100 non-agricultural workers — New Mexico, best; North Dakota, worst.

Vocational education enrollment as a percentage of population—Arizona, best; South Carolina, worst.

Percentage of population 18 years old and over who have completed four years of high school—Utah, best; Mississippi, worst.

Average percent of estimated non-agricultural working time lost due to work stoppages over two years — South Carolina, best; West Virginia, worst.

Value added by manufacturing employes per dollar of production payroll — Louisiana, best; Michigan, worst.

Annual average hours worked per week—Montana, best, Idaho, worst.

Fuel and electric energy costs per million BTUs for manufacturers—Louisiana, best; Connecticut, worst.

State expenditure on environmental control as a percentage of total state expenditures — Louisiana, best; Ohio, worst.

Population density per square mile—New Jersey, best; Wyoming, worst.

Absolute change in population over three years—California, best; New York, worst.

California data analyzed

Bad drivers kill more, study shows

SACRAMENTO. — The California Department of Motor Vehicles has concluded that people with bad driving records, including those with a high disregard for traffic regulations, are more apt to be involved in fatal accidents than those with blemish-free records.

DMV Director Doris V. Alexis said that "we began an intensive study to determine whether fatal accidents for individuals can be predicted. We found that only bad drivers, as a class, are more likely to be involved in a fatal accident and a higher frequency of fatal accidents can be predicted for this class, when compared with the general driving public."

The study report, by Marilee Garretson and Raymond C. Peck, of the agency's Research and Development Office, used statistics taken from a data base of 1970-1971 fatal-accident drivers.

Ronald Coppin, chief of the office, explained that DMV decided to analyze the data in greater scope and depth than originally planned "because of the recent increased public and legislative concern over fatal accidents caused by alcohol."

"The major conclusion," Coppin added, "was that drivers involved in fatal accidents are different than the driving population in general and that primary difference rests in prior violations. Such drivers have a considerable disregard for traffic laws in general."

• Males and females, the report asserted, tend to become involved in fatal accidents due to different types of driving errors.

"The males," according to Peck and Garretson, "had more violations and accidents of all types and also had received DMV licensing actions more often than females. The men were older and tended to be more often in possession of conditional or invalid licenses."

The most common violations of the male drivers were speeding, passing or overtaking, incorrect reading of signs or signals and equipment violations. Men also had more often been drinking, were traveling at higher speeds when the accident occurred and died more often as the result of the accident.

Females tended to accumulate primarily speeding and sign and signal violations and, more often than males, had not granted the right of way to other drivers.

Drivers who had been drinking prior to the accident, who were considered at fault for the accident, or whose accidents had occurred at night had worse prior driving records than other drivers involved in fatal accidents.

Also, drivers with a previous history of major violations, such as drunk and reckless driving, were more likely to have fatal accidents at night and fatal accidents involving alcohol.

The study involved a sample of 3,473 fatal-accident-involved drivers, obtained from accident reports submitted to the California Highway Patrol, and a comparison group of 3,487 drivers taken from the state's driving population.

Notchback headed for U. S.

Mitsubishi is to begin exporting its new notchback Mirage to the U. S. this summer. Built off the same platform as the hatchback Colt and Champ sold by Chrysler Corp. dealers, the new sedan has an overhang 8.9 inches longer for the trunk. Overall length is 161.6 inches.

Mitsubishi adds sedan, cylinder cutoff and turbo

TOKYO. — Mitsubishi Motors Corp. has facelifted its Mirage hatchback, added a sedan to the lineup and introduced two powertrain twists: Cylinder cutoff and turbocharger.

The new models are likely to be exported this summer. Although MMC is supplying four-door versions of the hatchback to Chrysler Corp., an MMC spokesman here emphasized there are as yet no firm plans to send the new models to Chrysler.

The implication is that the new sedans will be sold through Mitsubishi's own dealer network that is to be in place for the 1983 model year.

The cylinder cutoff system is said to improve fuel consumption 25 percent in Japan's 10-mode city cycle.

An electro-hydraulic system cuts two of the four cylinders at low speeds. The system consists of a number of sensors, an electronic controller, a special idling circuit, a hydraulic pump and hydraulic actuators built into the rocker arms of cylinders number 1 and 4.

The sensors detect inlet manifold pressure, water temperature, the gear in use and engine and road speed. The engine is converted to two-cylinder operation at speeds below 43 MPH on deceleration and during idling.

• In the end of each rocker for No. 1 and 4 cylinders is a plunger.

Normally, this plunger is held rigidly against a shoulder. However, when the two-cylinder operation is instigated, the hydraulic cylinder in the rocker pushes a forked plate forward so that the plunger can move up and down inside the rocker end and the valve is not operated.

MMC claims an improvement in fuel consumption to 47 MPG on the Japanese 10-mode city cycle, against 37 MPG for the normal engine. At a steady 37 MPH, the mileage is quoted as 70 MPG against 61 MPG for the standard unit.

Only the three-door, 1.4-liter hatchback will be available with turbocharger. Power output is boosted from 82 to 105 bhp at 5,500 RPM.

All the models in the expanded Mirage range have a new sloping front grille and plastic bumpers and a revised interior.

Basic dimensions of the front-wheel-drive cars remain the same. The four-door notchback versions, however, have a rear overhang 8.9 inches longer to provide for a trunk.

Thus, the overall length of the sedan is 161.6 inches, almost the same as the new Nissan Sunny (to be called the Sentra in the U. S.) and the Honda Ballade.

The rear seat is split and folds forward to give the carrying capacity of a hatchback.

Webber elected

PAWTUCKET, R. I. — Christine M. Webber, vice president and secretary of Webber Chevrolet Co., West Warwick, has been elected a corporator of the Pawtucket Institution for Savings.

Turbo Mirage unveiled

The facelifted Mitsubishi Mirage three-door hatchback is offered with a turbocharger that boosts power from the 1.4-liter engine from 82 to 105 BHP. The new Mirage line is expected to be sold in the U. S. only by Mitsubishi's own dealers, not by Chrysler dealers.

Australian unit to get practical evaluations

Makers support orbital engines

BULCATTA, Australia. — It is nearly 10 years since West Australian inventor Ralph Sarich hit the headlines with his award-winning orbital engine design, but the promise has not died.

The 42-year-old self-taught engineer has completed a tour of European, Japanese and U. S. car firms, demonstrating the latest version of his unique engine.

He said that of the 16 companies visited, nine have signed letters which commit them to undertake a practical evaluation of the design. He is selling experimental prototypes at prices up to $1 million a unit, to help cover developmental costs.

Sarich owns half of the company, Orbital Engines, which has $20 million backing from one of Australia's largest public companies, BHP. BHP executives have followed his progress closely, and some accompanied Sarich on his recent tour of major car firms.

Other than the engine, Orbital Engines is working on a number of Sarich ideas.

One is a light-weight, simplified fuel-injection system, small enough to hold in the palm of the hand. Sarich designed it to overcome carburetor problems experienced with the orbital engine, but found that it worked extremely well with conventional piston engines. Fuel savings of 15 percent are claimed, as well as reduced emission levels.

BHP recently announced that it will inject a further $3 million in the Orbital Engines company, which also receives government grants.

Some 15 prototype orbital engines have been built since 1972. The latest, a five-chamber, two-liter design, is claimed to be half the weight of a 2-liter piston engine but to develop more power. Lower exhaust emissions, especially NOx, are claimed.

The design is not perfect.

"We know the engine's shortfalls," Sarich has said. "But we also know its benefits, and the reactions we have had from overseas engineers shows they can see benefits, too."

The original Sarich engine, a 3.5-liter, seven-chamber orbital unit, proved controversial, receiving both high praise and criticism from eminent automotive engineers.

Sarich said the latest prototypes exceed the tough Australian exhaust emission laws and produce superior fuel economy when subject to the Australian 2077 checks.

He said fuel efficiency is currently 15 percent higher than a piston engine but that will rise to 40 percent with further developments. Significant improvements in sealing and combustion have been achieved since the first prototype.

Orbital Engines now works out of ultra-modern facilities in this Perth suburb, with a full-time staff of 60. It is also engaged in government research and development work.

Derrick celebrates silver anniversary

NADA Secretary-elect H. E. Derrick Jr., center, president of Lexington Motor Sales, Inc., Lexington, Va., was recognized for more than a quarter-century of service as a Pontiac dealer. Presenting him with a plaque are W. E. Enockson, left, zone manager, and Julie Jones, district manager. An NADA director since 1978, Derrick has served as president of the Virginia Automobile Dealers Assn., chairman of the Pontiac National Dealer Council and is now a member of the GMC Zone Dealer Council.

FTC is asked to drop charges in antiknock case

WASHINGTON. — The four major producers of lead-based antiknock compounds in gasoline have asked the FTC to throw out an antitrust violation against them for price signaling, on the grounds it is common industry practice and violates their First Amendments rights.

At a hearing here, representatives from Ethyl Corp., PPG Industries, Nalco Chemical and E.I. du Pont de Nemours & Co., asserted that if what they did was outlawed, American business would have to change many of its common practices.

"Any action to prohibit industry from releasing pricing information to the news media raises serious First Amendment questions and may conflict with corporate obligations to disclose such information to investors," they said.

The FTC last year accused the firms of violating antitrust laws by signaling price changes to each other. In August, an FTC administrative law judge forbade the firms from:

1. Announcing price changes before their effective date.
2. Using a pricing formula that systematically matches a competitor's price.
3. Providing sales information to any of its competitors except in connection with a legitimate sale between them, and
4. Using "most-favored-nation" clauses in contracts.

The judge's orders do not go into effect until the firms have exhausted all their appeals.

New Opel Rekord now scheduled as an '87 model

BERLIN. — A new Opel Rekord, originally scheduled to go into production in the fall of 1983 as a 1984 model, has been delayed rather than canceled, as Automotive News reported earlier (Feb. 1).

The Rekord, German sources say, will be facelifted for 1983, with a new front, rear and interior. Mechanicals will be unchanged.

The all-new Rekord has been pushed back from production startup in the fall of 1983 to the fall of 1986, as a 1987 model. It is unclear whether it will have front-wheel or rear-wheel drive.

Opel plans to facelift its prestige models, Senator and Monza, for 1984. One or two years later, the independent rear suspension from those models could be adapted to the Rekord.

November total is poorest since 1974

Car registrations dip to 1981 low

By Jenny L. King
Staff Writer

U. S. new-car registrations in November reflected a weak domestic market as the total slipped to its lowest level for the month since 1974 as well as its lowest point for any month in 1981, according to figures compiled by R. L. Polk & Co.

New-car registrations for November totaled 613,740, down 6.20 percent from 654,330 the preceding month, and down

Table on Page 136

15.89 percent from 729,719 a year earlier.

The record for the month is 946,917, posted in 1972.

Though down in actual numbers, imports increased their share of the soft market, climbing to 27.57 percent from 25.61 percent a year earlier. Import registrations totaled 169,227, down 9.44 percent from 186,869 in November of 1980.

Registrations of new domestic-built cars numbered 444,513 for the month, down 5.81 percent from 471,920 in October, and down 18.11 percent from

Texas town finds car sales run ahead of other years

By Jess F. Blair
Staff Correspondent

BIG SPRINGS, Tex.—Despite depressed car sales in other parts of the country, both cars and trucks are moving more rapidly here than they have in several years.

Jack Lewis, Jack Lewis Buick and Cadillac, said that his sales were up 20 percent over this time last year, and he expects the trend to continue. He said larger cars were selling well.

Sales at Highland South Pontiac-Datsun are "fantastic" after a slow period, according to Bill Lassater, sales manager. Used cars are selling very well and at present are the most profitable department.

Gary Galloway, sales manager at Mesa Valley Toyota, said sales were up 15 to 20 percent from last year.

Two dealers who sell a large number of pickups and trucks in the area report a real boom in such sales. Bert Hilger, sales manager at Bob Brock Ford, said that 65 to 70 percent of sales were in pickups and trucks, with most of the pickups being sold to farmers who made a bumper cotton crop in 1981. Oil-drilling activity has also increased truck and pickup sales.

Larger cars such as the LTD and Grand Marquis are selling better than in the past, Hilger said.

At Pollard Chevrolet sales were higher in 1981 than ever before, reported Sales Manager Tony Ginnetti, with pickups and trucks outselling cars by three to one. He said small-car sales were down but mid-size and full-size car sales have taken up the slack. The company is now considering an expansion of the car lots.

Big cars are also selling better at Shroyer Motor Co., according to Sonny Shroyer, with the Oldsmobile 98 and 88 and Cutlass models doing well. People are buying the larger cars for safety reasons, Shroyer said, not just because the newer models are getting improved gasoline mileage.

Hutt leaves Gilmore

KALAMAZOO, Mich. — Hilbert Hutt, executive vice president and general manager of Jim Gilmore Cadillac-Pontiac-Datsun has announced his retirement from the automobile dealership after nearly 20 years of service. Jim Gilmore III will assume the title of general manager.

Gilmore said, "We wish Hilbert Hutt much happiness in his retirement. He has developed a strong management team which will continue our tradition of quality product sales and service to our customers."

November total is poorest since 1974

Car registrations dip to 1981 low

Continued from Page 134

542,850 in November of 1980.

Registrations of new cars in the U. S. for the first 11 months of 1981 totaled 7,832,399, down 2.70 percent from 8,050,116 a year earlier. The domestic year-to-date figure of 5,585,001 was down 3.18 percent from 5,768,681 in 1980. Import registrations for the 11-month period were 2,247,398, down 1.49 percent from 2,281,435.

• Among the major U. S. car makers, Ford Motor Co. and Chrysler Corp. registered domestic market share gains in November, while General Motors and American Motors lost ground.

Ford accounted for 23.90 percent of the month's domestic new-car registrations, up from 23.00 percent a year earlier. Chrysler shot up to 11.82 percent from 9.75 percent. GM dipped to 62.12 percent from 64.84 percent, AMC had 2.08 percent compared with 2.35 percent and miscellaneous domestics earned 0.08 percent, up from 0.06 percent.

Of the total November market, GM earned 44.99 percent, down from 48.23 percent in 1980. Ford products accounted for 17.31 percent, up from 17.11 percent. Chrysler stood at 8.56 percent, up from 7.26 percent; AMC dropped to 1.51 percent from 1.75 percent, and the miscellaneous makes accounted for 0.06 percent compared with 0.04 percent a year earlier. Imported cars grabbed 27.57 percent of the total, up from 25.61 percent.

By size segments, subcompacts, luxury models and the imports increased their shares as the compacts, intermediates and standards were off for the month.

U. S. subcompacts progressed 1.63 percentage points, to 15.69 percent of the market from 14.06 percent a year earlier. Luxury cars climbed to 5.79 percent from 5.04 percent, and imports were up 1.96 percentage points, to 27.57 percent from 25.61 percent.

U. S. compacts slipped to 19.94 percent from 21.21 percent, intermediates were down to 20.46 percent from 23.16 percent and standards dipped 0.37 of a percentage point, to 10.55 percent from 10.92 percent.

In the domestic market alone, subcompacts accounted for 21.66 percent in November, compacts were 27.53 percent, intermediates were 28.25 percent, standards were 14.56 percent and luxury models were an even 8.00 percent.

Registrations by market class in November were: Subcompact, 96,288; compact, 122,353; intermediate, 125,592; standard, 64,722; luxury, 35,558, and imports, 169,227.

In the top-ten lineup year-to-date, Toyota skipped over Pontiac to gain fifth place, and Plymouth replaced Volkswagen as the number-ten make. In order, the best ten were: Chevrolet, Ford, Oldsmobile, Buick, Toyota, Pontiac, Datsun, Honda, Mercury and Plymouth.

Peugeot expands ski sponsorship to national level

LYNDHURST, N. J.—Peugeot Motors of America's involvement in professional skiing has been expanded to include a national final this year. The company is sponsoring the only professional downhill ski races in the U. S. this year.

Anthony Aldarelli, Peugeot's general sales manager, said the national effort, called the Peugeot Gran Prix, originally had not been in the company's game plan for this year. But when another tour was canceled, this became the "only game in town."

There will be 35 races throughout the country on this circuit, he said, adding that Peugeot's "main goal this year is to make these races the most professional anyone has run."

The company began its involvement with professional skiing several years ago. It limited its activity at first to the Northeast, and gradually expanded it to other areas of the country.

This slow growth had been expected to continue this year, Aldarelli said, but when the opportunity arose to create a national effort, the company decided to take advantage of it.

Since this is the only professional circuit, Peugeot expects it will get heavy coverage by the media, which will increase the effectiveness of Peugeot's promotional effort.

Sponsorship of sports is an effective method of promotion for auto companies, Aldarelli said. The two sports Peugeot sponsors—skiing and tennis—are especially effective because they are "social sports" and participants fit the demographics of Peugeot's buyer profile, he said.

Aldarelli said the tour final will offer the biggest purse for a single event: $10,000. The winner of each regional tour gets a car plus aggregate winnings, he said.

Because of GM's rebate program

Olds Firenza ads appear early

By Joseph Bohn
Marketing Editor

Oldsmobile's new Firenza ads broke a little early, Feb. 17, because of General Motors' unanticipated rebate program.

The division had to begin advertising rebates on the car, in fact, before it was even properly introduced.

But formal introduction came on TV last week via two commercials, one for the hatchback coupe, another for the four-door sedan.

Commercial messages on both are pretty much the same, although the coupe is cast in a sportier, fun-to-drive type setting, acording to John Hamill, ad manager.

TV for the coupe uses a lot of quick camera cuts in a driving situation, telling the story of a man leaving home and ending up doing a little guitar-picking with a group of people on a weekend.

"What makes a car right for the times shouldn't make it wrong for Saturday night. Introducing Firenza. It's what a small car can be when it's an Oldsmobile. Firenza. The newest, smallest Oldsmobile," says a voiceover.

The same theme carries into print.

"Introducing Firenza. It's what a small car can be when it's an Oldsmobile . . . this is the newest, smallest Oldsmobile" say single-page ads, calling attention to various standard features.

"The new Olds Firenza. Hatchback or four-door sedan. It's proof of what a small car can be when it's an Oldsmobile," the single-page ad continues.

Sixteen magazine insertions are planned for March, concentrated in mass circulation and news weekly magazines, aimed at upscale audiences.

Only the hatchback coupe is featured in the March magazine run, but Hamill said high-tech and buff books will be added as future ads get into more specifics, like the five-speed manual transmission to be offered.

Firenza will also be part of a spring newspaper run, beginning in March, which Oldsmobile is co-oping with dealers.

Within that newspaper ad, the Ciera, V-6 diesel and the GM rebates will also be featured.

The theme, "There's a lot of news from Olds today" is flexible enough to allow different adaptations to dealers' purposes.

Leo Burnett is the agency.

The smallest Olds

Oldsmobile is introducing Firenza in TV and magazines as its "newest, smallest Oldsmobile," setting it apart from other small cars. Sixteen single-page magazine insertions run in March, with dealer co-op newspaper also planned. Leo Burnett is the agency.

Auto auction open in Philadelphia, but with new twist

PHILADELPHIA. — A new wrinkle in car auctions was staged here by the Philadelphia Auto Auction (PAA) at its first sale. The new company sells dealers' overstock, fleet vehicles and bank repossessions, but also handles cars from private individuals.

PAA is conducting one sale a week, and officials expect to sell 100 to 150 cars per session. Auctions are conducted under near-assembly line conditions. The cars go into the company's building and in front of the auctioneer's stand. The building has been remodeled into a structure not unlike a car wash. Allen Gross, the company's auctioneer, announces the kind of car being sold and its condition if anything obvious is wrong with it. Basically, sales are as is.

A bidder must register before he can bid on the cars or even look at them. To register, buyers must pay a fee of $50, which PAA officials said may be applied to the cost of the car purchased. It will be refunded if the bidder does not make a purchase. Bidders are encouraged to register in advance and may do so by telephone.

The auction charges a flat purchase fee rather than the percentage premium common at most auctions.

Baer Ford is sold; it's now Bear Ford

WILKES-BARRE, Pa. — Baer Ford in suburban Huntington Mills has become Bear Ford. Former owner Marguerite Baer sold the dealership to Allyn Griffith.

The dealership will be managed by Tom Piercy, who said the subtle name change was made to retain the identity of the dealership because of the Baers' excellent reputation in their 26-year ownership.

Collection adds Clenet

MIAMI, Fla.—A Clenet franchise has been given to the Collection, a Miami dealership owned by Joe DeMaria.

Tops 100,000 for 1st time, but trails year-ago week

Auto production is highest of 1982

By Patricia Hoffman
Staff Writer

For the first time this year, domestic auto production reached 100,000 units, putting last week's total well above that of the previous week. All plants except seven General Motors facilities were working.

The auto makers scheduled 105,140 units last week, a gain of 41.31 percent from 74,403 the previous week due to the return of two Chrysler Corp. facilities and six Ford Motor assembly points.

The total, however, was 21.27 percent below the 133,543 cars built in the comparable 1981 week, and the year-to-date output of 512,111 units was 37.01 percent below 813,028 in the same period last year.

Seven GM facilities remained idle last week (Feb. 15), five for inventory control and two for model changeover. They were Framingham, Lordstown, South Gate, Tarrytown and Wilmington, all down for inventory adjustments, and Janesville and Oklahoma City, idle for changeover.

Operations resumed last week at Chrysler's Belvidere and Jefferson assembly points. Both facilities had been idle for inventory control since Feb. 1.

Also back were Ford's Atlanta, Dearborn, Kansas City and Wayne points, all idle since Jan. 25, and Ford's San Jose and Lorain facilities, both down since Feb. 1.

Downtime is scheduled this week at 10 GM facilities. They are: Arlington, Baltimore, Detroit, Framingham, Janesville, Lordstown, Oklahoma City, South Gate, Tarrytown and Wilmington.

Volkswagen of America's Westmoreland point begins a two-week shutdown today to reduce inventory. The facility is slated to resume operations March 8 and will be idle again for one week starting March 22. The repeated downtime is due to slumping sales of the VW Rabbit.

On March 1, GM will increase production of the Chevrolet Camaro and Pontiac Firebird from one shift to two shifts at Norwood. About 1,700 workers will be called back from indefinite layoff.

Also on March 1, GM will cut production at Lordstown from two shifts at 75 units an hour to one shift. There will be 3,400 workers put on indefinite layoff.

GM's Fremont facility will be closed March 5 when it discontinues production of the Chevrolet Celebrity and Oldsmobile Cutlass Ciera. There will be approximately 2,500 workers on indefinite layoff.

On April 2, GM will halt production of the Chevrolet Cavalier and Cadillac Cimarron at its South Gate facility, putting 2,500 workers on indefinite layoff. Assembly of those cars will be moved to Janesville, which has been idle since Jan. 18 for changeover from the Pontiac J2000 and Buick Skyhawk.

According to GM, Janesville, which currently assembles Chevrolet and GMC light-duty trucks on one line, will use the open car line to accommodate Cavalier and Cimarron production once the changeover is complete.

Japanese buy fewer imports

TOKYO. — Sales of imported cars in Japan declined 15 percent in 1981 to 38,110, according to the Japan Automobile Importers Assn. The year-earlier total had been 44,871.

For December alone, the count was 3,370, down 20 percent from 4,338 a year earlier.

Leading imports in December were: Volkswagen, 1,051; Mercedes-Benz, 565; BMW, 342; Audi, 278; BL Mini, 131, and Buick, 129.

Truck production up 15 pct.; 41,558 scheduled for week

With only one truck assembly plant idle last week, domestic truck production rose 15.11 percent above the previous week's output, and the total also was up substantially from the comparable 1981 week.

The truck makers scheduled 41,558 units last week, a gain from 36,104 the previous week, and up 26.99 percent from 32,725 the comparable week last year.

Year-to-date, the makers have finished 228,480 trucks, a 4.95 percent drop from 240,369 completed in the same period last year.

International Harvester's Ft. Wayne facility began a two-week shutdown last week (Feb. 15) for inventory control. The plant is scheduled to return March 1.

Operations resumed last week at Ford Motor's Kansas City and San Jose facilities. Both points were idle for inventory control.

Also back last week were Chrysler Corp.'s Belvidere and Warren points, which also had been down for inventory adjustments.

Volkswagen of America will halt production of pickups at its Westmoreland facility starting today (Feb. 22). The plant will be idle for two weeks, with operations slated to resume March 8. Another shutdown has been scheduled at the facility starting March 22, for one week.

VWoA reported that the repeated closings at the Westmoreland point are due to a decline in sales. The facility has been in operation only eight of the past 14 weeks.

General Motors' Lordstown (van) facility will be idle this week.

GM announced that on March 1, the Pontiac (GMC Truck & Coach) facility will reduce production of the Chevrolet and GMC light-duty utility trucks from two shifts to one shift. This will result in approximately 1,050 workers being placed on indefinite layoff.

Also at GM, the Lordstown (van) plant (Chevrolet and GMC vans), and the Janesville facility (Chevrolet and GMC light-duty trucks) will increase production from one shift to two shifts, starting April 5. Approximately 1,000 workers at each point will be called back from indefinite layoff.

Car output dips 20 pct. in Canada; GM line down

Downtime at General Motors' Oshawa (No. One) car facility and a one-day holiday closing at Volvo's Halifax point pulled last week's Canadian auto production down 20.12 percent below the previous week's output, but the year-to-date total remained ahead of the comparable 1981 period.

The auto makers targeted output last week at 13,921 units, down from 17,427 the previous week, and down 8.68 percent from 15,244 in the comparable week last year.

Year-to-date, the makers have finished 92,356 cars, a gain of 9.35 percent from 84,457 in the same period last year.

The truck manufacturers scheduled a gain last week due to the return of Ford Motor's Oakville plant. Output was estimated at 11,038 units, up 37.49 percent from 8,028 in the previous week, but the total was 9.69 percent below 12,223 in the comparable 1981 week.

So far this year, the truck makers have assembled 53,276 units, down 29.38 percent from 75,436 in last year's comparable period.

Volvo's Halifax facility was idle last Monday (Feb. 15) due to the Heritage Day holiday.

Downtime continued last week at Ford's St. Thomas car point. The facility, idle since Feb. 1, is scheduled to return today (Feb. 22).

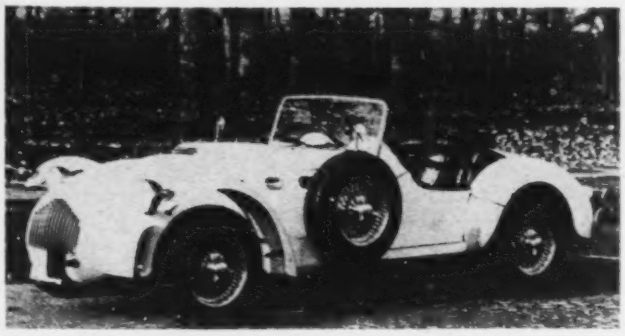
Allard redux



Chrysler-powered replicar

Allard Motor Co., Ltd., Mississauga, Ont., has begun production of the J2x2 Chrysler-Powered Allard. The drive train and major mechanical components are of Chrysler origin, as were many of the original Allard racing and sports cars in the '50s. The company said Chrysler Corp. dealers will get sales preference.

Unexpected optimism erupts at NADA despite worry over high interest and price policy

By Robert M. Lienert
Editor

ATLANTA. — A rainbow of optimism appeared as if by magic from the retail auto industry's clouds at NADA's 65th Convention & Exposition here last week.

With no apparent foundation except early, scattered reports of healthy retail new-car sales on the Presidents' Birthday weekend (Feb. 12-15), optimistic talk permeated corridor conversations and official sessions and punctuated executives' comments.

A similar tide of optimism flowed strongly through the exposition, with heavy traffic found at booths featuring items perceived to be profit-builders or profit-savers. Computer business was particularly brisk.

This is not to say, of course, that there were no areas of concern. There were plenty. Leading the list, from the dealers' viewpoint, were high prices and high interest. NADA officials made it abundantly clear that they intend to continue pushing aggressively for a rollback of prices.

Factory officials were equally blunt in saying that this is not likely to happen.

F. James McDonald, president of General Motors, said at a press conference that GM considers "competitive pricing" not necessarily the same thing as lower prices.

Both dealers and manufacturers tend to view rebates as a rather unpalatable way of moving the market in a minor and temporary way.

NADA wants to make the rebates permanent in the form of a reduction in the sticker price.

• Surprisingly, the issue of Japanese competition, which dominated the NADA conclave two years ago, got very little attention this time around. In fact, Isuzu and Mitsubishi received a torrent of franchise applications in Atlanta. Isuzu reportedly increased the number of its franchise applications by 50 percent during the convention.

As for the optimistic attitude, a seat-of-the-pants feeling of better times ahead was expressed succinctly by one dealer who said things had been so rotten for so long they probably couldn't get any worse — they had to get better.

Pointing up this new era of optimism was a prediction by George W. Lyles, incoming NADA president, that new-car sales would increase 5 percent this year to 8.9 million units. But Lyles listed a couple of caveats.

"The projected improvement,"

First step in rearranging the shape of labor relations

UAW-Ford pact changing the game

By Marjorie Sorge
Labor Editor

DETROIT. — The new UAW/Ford Motor Co. contract is just the first piece of a giant puzzle that will totally rearrange the shape of labor relations when completed.

The pact will have far-reaching ramifications. Several of the new principles will provide the basis for the union's revised game plan where economics are not the entire strategy, Donald F. Ephlin, UAW vice president and director of the union's Ford Department, said in an AUTOMOTIVE NEWS interview.

These include:

1. The UAW can address the Ford board of directors twice a year on relevant matters. This could be the first step toward a seat on the Ford board.

2. Business decisions, general operations and finances of a plant will be discussed by both sides on the local level. While it is not an opening of the books, Ephlin said the exchange of information will benefit the union and the company.

3. On the national level, the company and the union will also work more closely together.

4. The UAW is hopeful blue-collar workers can move up the ranks into white-collar non-supervisory jobs as more training and education plans develop.

5. Laid-off high seniority workers can "bump" probationery workers at UAW-represented plants throughout the Ford network and are given preferential hiring rights for available work. This could lead to a more mobile workforce and to corporate seniority, but unless the economy picks up, it could almost eliminate new hires.

Profit sharing and the guaranteed income stream (GIS) which provides income security for laid-off workers with 15 years or more seniority also play a big role in the new game plan.

"We must be flexible, we must be creative and find new approaches," Ephlin said. "We must change from being just adversaries . . . grievance handlers . . . to representing the people in a broader spectrum of

DeLorean explores options, eyes financing

By Edward Lapham
Financial Editor

John DeLorean and his lieutenants spent last week exploring options and tactics available to the DeLorean sports car enterprise.

Included in the week's activities were meetings with potential investors, creditors and Sir Kenneth Cork, who had one week earlier been appointed receiver of the Belfast-based DeLorean Motor Cars, Ltd., when the car-building unit went into voluntary receivership.

The U. S. parent and marketing company, DeLorean Motor Co., was not included in the receivership. The company's 344 U. S. dealers continued to sell the stainless steel DeLorean sports cars with gullwing doors last week.

C. R. Brown, president of DMC's DeLorean Motor Cars of America marketing division, said the company still has about 40 candidates for dealerships, although any dealers signed now will not be investors like the early dealers, but will be signed to a standard franchise agreement.

Brown said there have been "mixed results" from the publicity received as a result of the voluntary receivership of the overseas unit.

"Things still look pretty good," he said, "But we need a shot of good publicity and an upturn in the market."

• DeLorean and Brown met with Bank of America officials last week to discuss the company's $30 million revolving credit line, of which DMC used more than $20 million to finance shipment of cars from Belfast to the U. S.

DeLorean also met with Citi-

Congress again considers veto of FTC rule

Second used-car battle opens

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Round one of the second match between Federal Trade Commissioner Patricia Bailey and used-car dealers occurred before a House Commerce subcommittee chaired by Rep. James Florio, New Jersey Democrat.

This time, Tom Greene, NADA's executive director of legislative affairs, testified. Greene was accompanied by Mark Grisler, a Woodbury (N. J.) dealer. Representing the National Independent Automobile Dealers was Joseph Eikenberg, president emeritus, accompanied by Charles Nicholson, current NIADA president.

Arguments were very much the same as during the first session of this Congress. Just a few days before that session was due to adjourn, the expected two-House veto of the FTC rule failed because Senator Robert Packwood, Oregon Republican, blocked Senate passage and thus mooted any House action.

The vote in the Senate Commerce Committee was 12 to 4 (with one abstention) for the veto; the House Committee vote was 27 to 14.

The Used-Car Rule in exactly the same form was resubmitted to Congress on Jan. 28, and the 90 legislative-day period for a two-House veto started to run. Since the issues and the lawmakers are precisely the same, the Senate may forego hearings and merely vote it up or down on the floor.

• Commissioner Bailey testified that dealer fears about the extent of their liability are "greatly exaggerated." She scored "major misconceptions" that inspections would be needed or that dealers would face large fines.

She released a new document of FTC's enforcement policy that says flat out that "no dealer will ever be subjected to an

Relaxation of standards run into heavy seas in the House

Governors oppose clean-air changes

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The first appearance of domestic auto industry witnesses pleading for quick changes in the Clean Air Act was completely overshadowed by West Virginia Gov. Jay Rockefeller IV, who said the National Governors Assn. opposed relaxing auto emission standards.

House Subcommittee Chairman Henry Waxman, California Democrat, meanwhile, was putting in his own Clean Air bill—one that makes some changes but which retains the current auto emission standards — in opposition to HR 5252, supported by the industry and the Administration.

Waxman thus was squaring off against his own committee chairman — John Dingell, of Michigan — in hopes he could garner support from higher-ranking Democrats and offer a measure closer to the hearts of his environmentally oriented colleagues in the Senate.

Which bill — the "fine-tuning" Waxman effort or the "moderate" and "bipartisan" Dingell measure — will make it out of the subcommittee is not clear. While the outlook in the House is more optimistic than in the Senate, it is not at all certain that any change will be made this year, much less in the "next few months" needed for production scheduling of '84 models and EPA certification.

Gov. Rockefeller, chairman of the Governor's Energy and Environment Committee, renewed the governor's support for most provisions dealing with stationary sources, but pointed out that the governors also want retention of current auto standards.

Even in the area of state implementation plans, the governors want limits set on delays and on any area wanting an extension beyond 1987 for carbon monoxide or ozone to put vehicle inspection-maintenance programs into place. (The Dingell bill would require I/M for extensions of both CO and ozone; the governors want I/M for either one or the other factor.)

The governors are concerned that relaxing the auto emission standards would adversely affect meeting ambient air quality standard and make additional controls on smokestacks necessary.

State and local air pollution officials were queried by governors about the impact of relaxing auto standards. Rockefeller stressed that the results were not scientifically valid since each state used its own assumptions to project growth and some were obviously better than others; moreover, 11 states did not respond.

But Rockefeller was firm in believing the trend — as determined by the officials on the spot — was important and accurate.

• For example, using the proposals in the Dingell bill—first, relaxing the auto and truck standards and then providing for innovative waivers—the survey showed average total loading of CO will rise above levels otherwise projected to occur by 9.4 percent to 17.3 percent in 1987 and by 14 to 56 percent in 2000.

Using the same proposed changes in the Dingell bill, the survey showed average total loadings of NOx will rise above the levels otherwise projected to occur by 13 to 16 percent in 1987 and by 28 to 39 percent in 2000.

Further, using those same Dingell bill assumptions:

1. Even with an inspection-maintenance program in place, 14 areas of the country are esti-

Auto makers lose $1.34 billion in '81; '80 was worse

The four domestic auto manufacturers suffered a combined net loss of $1.34 billion in 1981. Bad as that figure is, it was considerably less than their 1980 performance when the combined deficit was $4.22 billion.

General Motors was the only maker to show a profit in 1981. Its $333 million net income represented a turnaround of more than a billion dollars from 1980's loss of $763 million.

The other three companies were in the red, but each fared better in 1981 than in 1980.

Ford Motor Co. cut its deficit to $1.06 billion from $1.54 billion in 1980.

Chrysler Corp.'s loss was $476 million in 1981, down from $1.71 billion the previous year.

American Motors had a loss of $137 million in 1980, compared with a loss of $201 million in 1980.

Dollar sales increased 7.3 percent in 1981. The total for the four companies was $114.4 billion, compared with $106.6 billion in 1980.

Makers' Financial Results, 1981 vs. 1980

Rebates help, but mid-February total is slightly below 1981

New-car sales are highest of year

By Jenny L. King
Staff Writer

Domestic new-car sales in mid-February almost matched the year-ago level — they were down less than one percent.

But although they were not spectacular, sales were at their highest level so far this year. Generous rebates were a major stimulus to the lethargic '82 market.

Dealers retailed 167,395 units Feb. 11-20, down 0.82 percent from 168,787 in 1981. It was the best total to date, and the daily selling rate of 18,599 was the strongest since late November's 19,913 average.

General Motors and Ford Motor Co. turned in improved totals, while Chrysler Corp., Volkswagen of America and American Motors leaned in the other direction. GM, Ford and Chrysler sales were the highest to date this year.

GM reported sales of 103,743 new cars in mid-February, up 3.90 percent from 99,853 last year. Ford sales of 42,206 were up 4.55 percent from 40,368. Chrysler dropped to 16,556 from 19,294, a 14.19 percent decline. VWoA stood at 2,090, down 61.81 percent from 5,472, and estimated sales of 2,800 AMC units were down 26.32 percent from 3,800 a year ago.

GM earned 61.97 percent of the domestic market, up from 59.16 percent in 1981. Ford climbed to 25.22 percent from 23.92 percent. Chrysler slipped back to 9.89 percent from 11.43 percent — its smallest share of the market to date this year and smallest since third-period November, 1981.

AMC sales accounted for an estimated 1.67 percent of the total, down from 2.25 percent last year, and VWoA held the remaining 1.25 percent, down from 3.24 percent.

Nine domestic makes, including all Ford and GM makes, were up during the mid-month period. Lincoln soared 48.23 percent, Mercury was up 7.24 percent and Ford was up 1.01 percent. Cadillac climbed 9.58 percent, Chevrolet was up 5.18 percent, Pontiac was up 3.02 percent, Oldsmobile was up 2.27 percent and Buick was up 1.82 percent.

Chrysler was the only Chrysler Corp. make to exceed last year's sales. It was up 40.48 percent, while Dodge dropped 22.99 percent, Plymouth was down 20.85 percent and Imperial was down 7.89 percent.

With nine selling days this year and last, the daily average of 18.599 was down 0.82 percent from 18,754.

Year-to-date sales reached 677,806, down 12.45 percent from 774,173.

Buick's newest and smallest

Two-door notchback version of the new Skyhawk, Buick's version of the J-car, has made its debut. The sharply wedge-shaped design gives the Skyhawk the lowest coefficient of drag of any Buick model. Standard is a 1.8-liter four-cylinder engine.

Buick's smallest debuts —the Skyhawk J-car

FLINT. — The 1982 Buick Skyhawk, the newest and smallest in the Buick lineup, makes its debut this month.

Bearing a family resemblance to the new Buick Century, the front-wheel-drive Skyhawk's aerodynamic wedge shape gives it the lowest coefficient of drag of any Buick.

The Skyhawk series is available in coupe and sedan and Limited coupe and sedan.

Three engines are offered: A standard 1.8-liter four, an optional 1.8-liter fuel-injected overhead-cam four and a 2.0-liter four. Standard transmission with the standard engine is a four-speed manual. An automatic is available on all engines and a five-speed manual will be available with the OHC four.

In the automatic transmission, a 2.4-ratio torque converter will give greater torque multiplication for acceleration. The transmission also has a converter clutch which is engaged in third gear.

The Skyhawk instrument panel features a complete set of gauges (on Limited models), including voltmeter and oil pressure and fuel and temperature readings. A tachometer is available.

Other features include fingertip rocker switches for headlamp, parking and turning lamps and available rear window defogger. The in-dash vent system includes separate vents for slide window defogging.

The Skyhawks come with underhood, glove box and trunk lights, front console, custom color coordinated seat belts, trunk trim, AM radio with dual speakers and mast antenna, front and rear passenger assist handles, full wheel covers, body side moldings and power brakes.

Standard on coupe models is an "easy entry" passenger side front seat. When the seat back is tipped forward, the entire seat moves forward. The seat also has a memory feature, allowing it to return to the last fore/aft position.

Limited models are available with cloth interiors of the same knit velour that is used in the Electra Park Avenue.

The MacPherson strut front suspension design has lower control arms mounted to the front and rear of outrigger assemblies. The strut tuning is specific to the Skyhawk, with the shock absorber compression and rebound orifices opened up, and high rate rebound and compression springs specified. The result is a comfortable, isolated ride, without a sacrifice in handling.

Rear suspension is a semi-independent trailing crank arm design, which allows the axle to twist when one wheel goes over a bump. Here again, Buick engineers specified large orifices in the shocks and high rate return springs for smoothness and isolation.

Skyhawk four-door sedan

The Buick Skyhawk four-door sedan is small, but carries on Buick's luxury tradition. Standard interior features individual reclining seats covered in a woven velour (vinyl is available). A four-speed manual transmission is standard and automatic is optional.

Action continues strong in upper segments of the market

Specialty and luxury cars a bright spot amidst the gloom

By Kathleen Hamilton
News Editor

As the auto industry sifts through gloomy profit reports and 10-day sales figures and forecasts promising an upturn no earlier than summer, the time has come for some springtime cheer.

It can't be of the traditional variety, because the spring selling season doesn't promise to amount to much. Instead, then, let the optimists look at the lines that are likely to remain peppy until the rest of the market picks up:

A sampling of analysts, both independents and from the factories, unanimously agreed the only real action will continue to be in the upper price segment. There is room enough for both the luxury cars and high-tag sporty models to do well, they said.

The industry-watchers also agreed that even when the economy recovers and other price ranges begin to see growth, these high-priced models will continue to gain in sales.

Can it be true there will be an ever-growing affluent sector willing to buy high-priced cars?

Almost, said many analysts.

• One of the reasons for growth in the sector is the change in tax laws; another is pure demographics; still another is emotional.

Tax laws first: Changes enacted during the Reagan Administration have generally benefitted those in the high-income brackets, and they now have extra incentives to lease autos.

Faster depreciation schedules and the investment tax credits should especially encourage the luxury-car leasing business, according to Robert Wallach, president of Robert Consulting Group, Lynbrook, N. Y.

Indeed, a spokesman for Porsche-Audi said that about 50 percent of Porsche's West Coast deliveries are leased, and Audi deliveries in the area are running about 30 percent leased. Nearly half of all Mercedes-Benz deliveries are leased.

BMW also reported a healthy lease business, and Wallach sees equal opportunities for leasing in the American luxury-car markets, as well.

Part of the formula for a successful leasing operation, of course, are high tradein prices. These luxury models indeed are holding onto their values. A good part of the reason is the steady fuel supply and the confidence this has given consumers.

• J. Dave Power, president of J. D. Power & Associates, the Los Angeles-based public opinion research firm, reported that consumers no longer rank fuel economy as their top consideration in buying a car. It now ranks third — behind reliability and price — "almost back to where it should be," Power said.

This easing of the energy panic paved the way for the resurgence of interest in performance cars.

The strong starts for the Camaro and Firebird and the successes of the sporty Japanese upscale models such as the Toyota Celica Supra and the Datsun 280-ZX are right on the money, Power said. Sales are not likely to subside unless another energy crisis occurs. Toyota's sporty new Supra, for example, nearly doubled its January sales level of a year ago.

The $38,000 Porsche 928 is expected to turn in sales of 3,000 units in 1982—double the level of just two years ago.

Bruce Masterson, district manager for Data Resources, added the Chrysler LeBaron to the list of cars that his research firm sees as being in the right place at the right time.

But, sitting in his Detroit of-

Chrysler Defense sold to General Dynamics

By Edward Lapham
Financial Editor

Chrysler Corp. ended months of speculation by announcing it has agreed to sell its tank-building unit, Chrysler Defense, Inc., to General Dynamics Corp. for $348.5 million.

The sales will be finalized in March after approval by more federal government agencies. The U. S. Army and the Defense Department already have approved.

At a press conference called to announce the sale, Chrysler Chairman Lee Iacocca said the proceeds of the sale will combine with the company's $400 million cash surplus to give the auto maker "a cash cushion in the neighborhood of three-quarters of a billion dollars."

The cash cushion will be used to help "insulate" Chrysler from "the devastating effects of continued high interest rates" and keep the company's new product programs on schedule.

"This is a very beneficial arrangement for Chrysler Corp. and its employes, for the employes of the Defense Division and for General Dynamics," Iacocca said. "Now I think we're in a position to ride out the storm."

General Dynamics will assume the remainder of the labor contract with the UAW which expires Sept. 15. The UAW will continue to represent the workers at the Defense plants.

The sale, arranged by investment banking firm Lehman Brothers, Kuhn Loeb, was the result of many months of "bidding" by interested parties. General Dynamics and Teledyne, Inc., were among the finalists.

• Chrysler Defense, Inc., entered 1982 with an order backlog of about $1.75 billion, including nearly $1.0 billion in orders for the M-1 and M-60 tanks.

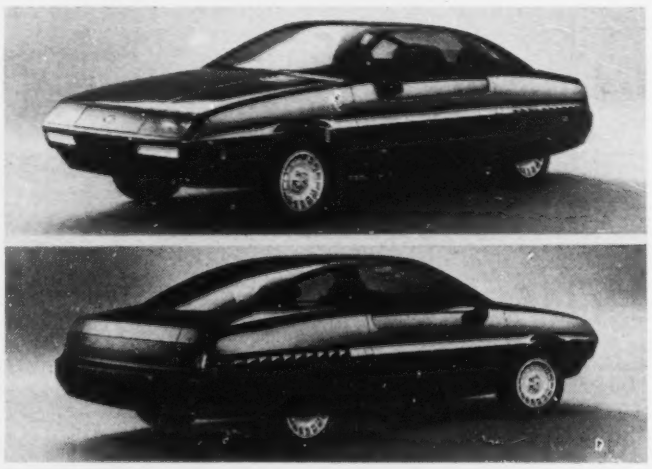
The company has about 7,000 hourly and salaried employes. The facilities involved in the sale include: The Lima Army Tank Plant, Lima, O.; Detroit Arsenal Tank Plant, Warren, Mich.; Defense Engineering, Center Line, Mich; Sterling Defense Components Plant and unit headquarters, Center Line, Mich., and Scranton Defense Plant components factory, Scranton, Pa.

Chrysler Defense operations began in 1941 with output of the M-3 tank used in World War II. The Detroit Tank Plant also built M-4 and M-26 models for use in that war.

Through the years, Chrysler also has built tanks in its Newark (Del.) facility and at the Cleveland Tank Plant, during 1965, where General Motors Corp. also has built tanks for the U. S. Army.

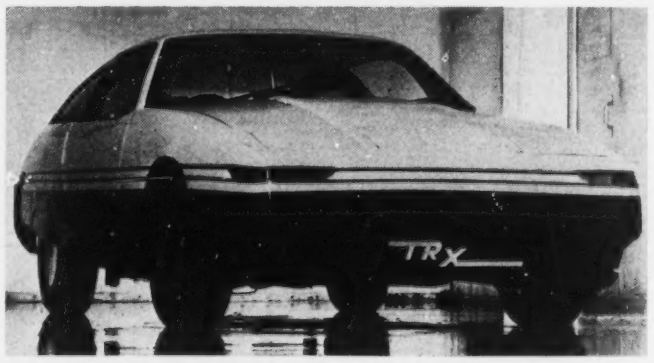
The corporation had built 48,-175 tanks from 1941 until Dec. 31, 1981.

It also currently is involved in the development of the M-1 Abrams 120-mm gun system and the development of a new tank for the Republic of Korea and is one of three companies working with the U. S. Army under contract to develop a high-mobility, multipurpose 1¼-ton truck which will be a successor to the Jeep and other light trucks currently used.



Look out, world

One of the highlights of the 1982 SAE Show in Detroit was this Ford concept car, the Topaz Mustang. The car was designed, developed and built by Ford's Ghia Operations in Turin, Italy, which worked with Ford's Design Center in Dearborn. Topaz Mustang, on an Escort platform, has an aerodynamic drag coefficient estimated at 0.33.



Trick TRX from GE

Folks attending the SAE Show at Detroit's Cobo Hall had some exotics to look at including this TRX. It's based on the BL, Ltd., TR7. Doors, fenders, roof and bumpers are made of GE plastics. European auto makers are moving—more quickly than their U. S. counterparts—toward large, functional exterior parts from an injection molded plastic.

Trade wars worry 'feisty' import dealers

By Jake Kelderman
Washington Staff Writer

ATLANTA. — More than 700 dealers of imported automobiles gathered here last week, to pat each other on the back, renew old acquaintances, talk about business.

It was the 12th annual meeting of the American International Automobile Dealers Assn. and although the spectres of high interest rates, a dormant economy, quotas and threats of protectionism did hang over the affair, the dealers managed, as AIADA President Robert McElwaine put it, to gather in an "ebullient and feisty" fashion.

And indeed why not, for in a "auto market that has sunk lower than anyone could have imagined, it is the import dealers, with only a few exceptions, who are still making money and, in many cases, making lots of money.

McElwaine called on the dealers to rally against two new forms of protectionism — the local content requirements the UAW is pressing for on Capital Hill and the so-called reciprocity requirements being pushed in the Senate.

Local content requirements "would precipitate a world trade war because they violate almost every U. S. international trade agreement," he said.

Far from making the U. S. auto industry stronger, local content requirements would make it non-competitive on world markets and reduce it to permanent dependence on the federal government, he said.

Reciprocity is just snake oil

Steel industry conference at SAE takes an odd turn

Japan upstages U.S. with U.S. development

By Roger Rowand
Engineering Editor

DETROIT. — A steel industry press conference at the SAE Show here almost turned into a high-powered plug for one thing steel makers in this country detest—Japanese steel.

Ironically, the steel that stole the show was, after all, not a Japanese development but one of U. S. Steel Corp.'s that had been ignored by the U. S. auto industry.

Joe King, manager of Chrysler Corp.'s Metallurgical Engineering Department, was a member of a five-man SAE panel. His job was to give an insider's view of present and future uses of high-strength and coated steels.

King said use of galvanized steel is the key to corrosion protection as pressure for more such protection rises. Currently, the auto industry depends heavily on prepainted steels for rust protection.

"A promising substitute candidate for prepainted steel is the two-side galvanneal (sic) produced by Japanese steel makers and used in Japanese cars in large quantities," King said.

"If its resistance to perforation stands up to its claims, this two-side iron-zinc alloy can be used in underbody structural

Fourth-quarter deficit put at $346 million

Ford makes it official: '81 loss was $1 billion

By Edward Lapham
Financial Editor

To no one's surprise, Ford Motor Co. reported a fourth-quarter loss of $346 million ($2.88 a share) on sales of $9.0 billion. This compared with the year-earlier loss of $316 million ($2.63 a share) on sales of $10.2 billion.

The fourth-quarter results brought the full-year deficit to a net loss of $1.06 billion ($8.81 a share) on sales of $38.2 billion compared with 1980's net loss of $1.54 billion ($12.83 a share) on sales of $37.1 billion.

The full-year loss, which was widely forecast and trumpeted during the contract concession talks with the UAW, still represents an improvement over 1980 due to "substantial reductions in fixed costs, improvements in operating efficiencies and an increase in Ford's share of the worldwide car market," a statement by Chairman Philip Caldwell and President Donald E. Petersen said.

The two executives said the results were nevertheless "unsatisfactory" and reflected low unit volume.

They said many of the improvements the company made during the year were obscured by currency translation losses of $576 million. The 1980 currency translation losses were $22 million.

In the U. S. in 1981, Ford reduced its after-tax loss to $1.195 billion from $2.018 billion in 1980.

Ford's Canadian operations incurred a 1981 after-tax loss of $252 million compared with a loss of $101 million the year before.

After-tax earnings from operations outside the U. S. and Canada declined to $387 million last year from $576 million in 1980.

Despite the improvements made by the company last year, the $1.06 billion net loss caused some erosion in the company's overall financial position.

Ford's current assets to current liabilities ratio, which measures liquidity, slipped somewhat, to 1.02 to one from 1.04 to one at the end of 1980.

Working capital decreased to $236.6 million at Dec. 31 compared with $487 million one year earlier and $2.3 billion at Dec. 31, 1979.

There were several significant swings in the components of working capital during the year. In 1981, cash items and marketable securities declined $487.2 million compared with a net increase of $394.6 million in 1980.

Receivables declined $402.3 million last year compared with a 1980 increase of $274.4 million.

Accounts payable increased by $878.1 million compared with a decrease of $783.2 million in the earlier 12-month period.

Ford listed depreciation for the year at $1.17 billion compared with $1.06 billion in 1980. Amortization of special tools was listed at $1.01 billion compared with $912 million.

Ford's total worldwide factory sales declined 0.6 percent in 1981 to 4,400,482 from 4,426,151 in 1980.

Total car and truck factory sales in the U. S. and Canada were off 2.8 percent to 2,356,473 from 2,422,208.

Total car and truck factory sales outside the U. S. and Canada rose 2.8 percent to 1,958,715 from 1,906,242.

Total worldwide car and truck wholesale sales fell 0.4 percent to 4,313,188 from 4,328,450.

Worldwide factory sales of tractors declined 10.7 percent to 87,294 from 97,701.

North American car sales plunge 44 pct. in Canada

January sales of North-American passenger cars and trucks in Canada plunged 43.17 percent. Cars were off 44.20 percent and trucks dropped 40.51 percent.

Combined car and truck sales totaled 36,151 this January compared with 63,609 a year ago. New-car sales of 25,576 were down 44.20 percent from 45,832, while truck sales of 10,575 were down 40.51 percent from 17,777.

General Motors suffered the greatest loss, down 51.88 percent in new-car sales, to 13,077 from 27,173 last year. Ford car sales dropped 39.49 percent, to 5,406 from 8,934. Chrysler was down 30.79 percent, to 5,505 from 7,954.

American Motors, which now reports only a car total without a Renault breakout, sold 1,163 units, down 29.09 percent from 1,640 AMC/Renault products a year earlier. Volvo sales totaled 425, down 37.32 percent from 678.

GM earned 51.13 percent of the new-car market, down more than eight percentage points from 59.29 percent 12 months ago. Ford cornered 21.14 percent, up from 19.49 percent. Chrysler was ahead of Ford with 21.52 percent, up from 17.35 percent. American Motors' 4.55 percent was up from 2.39 percent, and Volvo earned 1.66 percent, up from 1.48 percent.

Truck sales, including captive imports, totaled 10,575 in January, down 40.51 percent from 17,777 last year.

GM sales of 4,870 trucks were down 46.94 percent from 9,179. Ford was down 30.20 percent, to 3,736 from 5,809. Chrysler sold 1,673 new trucks, down 30.20 percent from 2,397, and AMC retailed 296 new Jeeps, down 24.49 percent from 392.

GM earned 46.05 percent of the truck market, down from 51.63 percent. Ford climbed to 35.33 percent from 32.68 percent. Chrysler earned 15.82 percent, up from 13.48 percent, and AMC had 2.80 percent, up from 2.21 percent.

Taylor appointed

NEW YORK. — Joseph D. Taylor Jr., has been appointed control branch manager of the General Motors Acceptance Corp. office in Alexandria, Va. He succeeds Bruce A. Dobbertin, who is retiring.

25-year dealer

Jasper A. Kalo, right, president, Kalo Motors, Inc., Grafton, W. Va., receives a plaque marking his silver anniversary as an Oldsmobile dealer from Jerry L. Parkinson, Pittsburgh zone manager.

Year-to-date total is 36 pct. below 1981

Week's output declines to 91,326

By Patricia Hoffman
Staff Writer

Downtime at three more General Motor points, Ford Motor's Lorain facility and Volkswagen of America's Westmoreland plant pulled last week's domestic auto production below the previous week's output, and the total drop was down substantially from that of the comparable 1981 week.

Last week, the auto makers targeted output at 91,326 units, down 12.50 percent from 104,376 the previous week, and down 31.31 percent from 132,947 the same week last year.

Year-to-date, the makers have built 602,673 cars, down 36.12 percent from 943,435 in the comparable 1981 period.

VWoA began a two-week shutdown at Westmoreland last week (Feb. 22). The plant is slated to return March 8 for two weeks but will be idle again the week of March 22.

GM's Arlington, Baltimore and Detroit facilities closed last week to control inventories. The Detroit point is scheduled to return today (March 1).

Also at GM, the Janesville and Oklahoma City plants remained idle last week for changeover. Both points have been down since Jan. 18.

The GM Framingham, Lordstown, South Gate, Tarrytown and Wilmington points continued down last week for inventory control.

Wilmington is scheduled to resume operations today for the first time this year, and South Gate, which was down for the entire month of February, is also slated to return today.

GM's Norwood facility will begin second-shift operations today, increasing production of the Chevrolet Camaro and Pontiac Firebird. About 1,700 workers will be called back from indefinite layoff.

Ford's Lorain point was idle last week for inventory control.

Production breakdown for the week by company is: GM, 53.10 percent; Ford, 28.88 percent; Chrysler Corp. 16.21 percent; American Motors, 1.70 percent; and Checker Motors, 0.11 percent.

AMC loss is $136 million, deficit smaller than in 1980

By Edward Lapham
Financial Editor

American Motors reported a fourth-quarter net loss of $47.2 million (85 cents a share) on sales of $621.1 million. The previous year, AMC suffered a net loss of $29 million (81 cents a share) on sales of $657.9 million.

The dismal October-December results brought the auto maker's full-year net loss to $136.6 million ($2.44 a share) on sales of $2.59 billion, compared with the 1980 net loss of $200.78 million ($6.10 a share) on sales of $2.55 billion.

W. Paul Tippett Jr., AMC's chairman and chief executive officer, said the auto maker reduced its year-to-year losses by 32 percent against a backdrop that was "one of the worst in industry history." He said "rigorous cost-cutting measures begun in 1980" were responsible for the loss reduction.

Tippett said the company's International Operations posted record sales and earnings last year "while increasing the company's share in world markets."

He said the company's AM General Corp. subsidiary also had a good year and received a record total of $830 million in new orders for military trucks and postal vehicles in 1981, making a year-end order backlog of "more than $1 billion."

Total automobile and Jeep factory sales in the U. S. and Canada declined 18.8 percent in the fourth quarter to 54,375 from 66,998 last year. For the entire year, the total was off 10.2 percent to 243,050 from 270,563.

Total automobile and Jeep factory sales overseas rose 13.6 percent in the October-December period to 12,490 from 10,996 in 1980. The total for the year was up 19.3 percent to 68,319 from 57,245.

Total worldwide wholesale sales of Jeeps and automobiles declined 14.3 percent in the fourth quarter to 66,865 from 77,994 in 1980. For the 12-month period, worldwide factory sales fell 5.0 percent to 311,369 from 327,808 in 1980.

Peck has headache to remember SAE

DETROIT.—Raymond Peck, NHTSA administrator may be a top-ranking government official, but position cut no ice as he tried to enter the SAE Show here.

No name tag, no admittance, said a husky, polite minion of Burns International Security Services. Once admitted, Peck took a ride on a 7-MPH impact demonstrator displayed by Ohio safety officials. The jolt on impact left the administrator with a pain that had him rubbing the back of his head.

VW shutdown reduces week's truck production

With Volkswagen of America's Westmoreland facility starting a two-week shutdown to control inventories, domestic truck production last week fell below the previous week's output. For the third consecutive week, however, the total was above the comparable 1981 period.

The truck makers targeted output last week at 40,892 units, down 2.80 percent from 42,070 the previous week, but a 15.74 percent gain from 35,332 in the same week last year.

So far this year, the makers have finished 269,884 trucks, down 2.10 percent from 275,677 in the comparable 1981 period.

As a result of sluggish sales of VW pickups, the Westmoreland point was closed last week for inventory control. Operations are slated to resume March 8 for two weeks, and another week of downtime is set for March 22.

International Harvester's Ft. Wayne facility was idle last week for the second of a two-week shutdown. The plant is scheduled to return today (March 1).

General Motors' Pontiac facility will end second-shift operations today, reducing production of Chevrolet and GMC light-duty utility trucks there. About 1,050 workers will be put on indefinite layoff.

Auto production in Canada tops 100,000, leads '81

Canadian auto production for 1982 reached 100,000 last week, topping the comparable 1981 total by 13.46 percent.

So far this year, the auto manufacturers have finished 111,219 units, up from 98,021 in the same period last year.

With all assembly points operating last week, the auto makers scheduled 18,525 units, a 29.92 percent gain from 14,259 the previous week, and up 31.19 percent from 14,121 in the comparable 1981 week.

The truck makers scheduled a slight gain last week with 10,943 units, up from 10,865 the previous week, but down 12.28 percent from 12,475 in the comparable week last year.

So far this year, the truck manufacturers have assembled 64,046 units, down 27.54 percent from 88,388 in the same 1981 period.

Ford Motor's St. Thomas car assembly point returned last week (Feb. 22) after being idle since Feb. 1 for inventory control.

All car and truck facilities operated last week.

Output skids to 34-year low for February

By Patricia Hoffman
Staff Writer

Although domestic auto production in February was higher than in January, the month's total was the lowest for February in 34 years.

The auto makers built 325,243 units in February, a 32.53 percent drop from 482,074 in the comparable 1981 month, and the lowest total for that month since 1948 when only 274,499 cars were completed.

Of the six auto companies, only Checker Motors showed a gain last month with 300 units, up 20.48 percent, from 249 in February of last year.

Losses for the month by the other manufacturers were: General Motors, 202,058, down 32.20 percent from 298,004 in last year's period; Ford Motor, 68,779, down 29.46 percent from 97,505; Chrysler Corp., 39,685, down 61.35 percent from 64,033; Volkswagen of America, 10,266, a drop of 38.04 percent from 16,567, and American Motors, 4,155, down 27.30 percent from 5,715.

March holds little hope for recovery as the makers have scheduled only 495,633 units, down 20.78 percent from 625,620 in the comparable 1981 month.

Again, only Checker is looking at a gain with 360 units forecast for this month, up from 209 last March.

The forecast for the other

New at Geneva

Ford Quicksilver bows at Geneva

The fertile drawing boards at Ford Motor Co.'s Ghia operations in Turin produced another concept car for the Geneva Auto Show. Known as the Quicksilver, it is not intended for production, the company said. It is the first-ever mid-engine four-door sedan. Drag coefficient of the Quicksilver is approximately 0.30.

First Porsche Cabriolet since '65

Porsche's 911-SC Cabriolet, making its debut at the Geneva show, is the first full cabriolet from Porsche in 17 years. The design includes a three-hoop system with a 50-percent fixed-roof segment beneath the closed cloth top, making it quite rigid. With a maximum speed of about 145 MPH, Porsche claims that the 911-SC Cabriolet is the fastest production cabriolet in the world.

Oldsmobile tops Chevy in U.S. sales per dealer

By Jenny L. King
Staff Writer

For the first time since 1970, Chevrolet dropped from the top spot as the U. S. make with most average sales per dealer in a calendar year. It yielded not to its old rival, Ford, which bumped it 11 years ago, but to Oldsmobile.

Oldsmobile dealers averaged 263 sales per outlet in 1981, compared with 259 for Chevrolet.

Average sales of domestic units per new-car dealership slipped to 275 from 276 the previous year. It would have dropped farther, but was buoyed by the addition of Volkswagen, now counted as a domestic dealership network. VW franchises numbered just over 1,000 and have a strong annual average.

The average per outlet was 333 in 1979 and 337 in 1978.

General Motors dealers sold an average of 349 units per outlet in 1981, down from 367 in 1980 and down from 426 in 1979. GM's record was 464 in 1978.

Volkswagen of American, new to the domestic lineup in 1981, averaged 241 sales per outlet, second among the five U. S. auto makers.

Ford Motor Co. averaged 236 sales per dealer in 1981, just missing its year-ago 237 mark. Two years ago, its dealers sold 322 units on an average.

Chrysler Corp. dealers sold an average of 193 new cars per outlet in 1981, up from 163 a year earlier. Two years ago, its dealer population averaged 202.

American Motors dealers slipped to an average of 85 units from 88 sales per dealer in 1980.

None of the traditional domestic makes met or surpassed sales-per-dealer records during 1981. Seven, however, were up from the 1980 averages.

Oldsmobile climbed to 263

breaking news

Mitsubishi Starion bows at Geneva

GENEVA.—Mitsubishi picked the Geneva Auto Show to unveil its new coupe, the Starion. The 2+2 has a 2-liter, turbocharged gasoline engine and an antiskid braking system. The car will be sold first in Europe and go on sale later in Japan and the U. S. This is the first time Mitsubishi has introduced a new model outside Japan and it will be the first time for marketing a new car outside the home market.

UAW and AMC continue investment talks

MILWAUKEE.—UAW officials will meet today (March 8) with American Motors Corp. officials to further explore a $150 million investment plan which requires workers to invest 10 percent of their raises in wages and benefits in AMC over a 22-month period. Members of the AMC-UAW Council were to decide last week if they would begin talks on the proposal but required more information before a decision was made.

Tops year-earlier month 11th time in row

Service Index maintains margin

By Francis J. Gawronski
Service Editor

With four of the five indicators in the Automotive News Service Index registering gains, service and parts business in new-car dealerships across the country jumped off to a good start in January with volume amounting to 105.3 percent of the business for the same month last year.

January marked the 11th consecutive month in which shop business has shown an increase over the comparable period the previous year. In January, 1981, service and parts business was up 1.8 percent.

The leading indicator this January was sales of all parts and P&A sales, those used in the shop plus counter and wholesale sales. This indicator was up 11.8 percent above the volume done a year ago.

Shop parts sales — those used in dealers' shops on customer-paid and warranty jobs — were up 11.6 percent, while gross profit on all labor, parts and P&A sales—the most important indicator from a dealer's standpoint—was up 8.6 percent.

Total labor sales, customer-paid and warranty, were up 2.0 percent, while repair orders written were off 7.7 percent from the volume registered in the same month in 1981.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross-section of the nation's new-car dealers.

SERVICE INDEX
105.3*

	Jan., '82 vs. Jan., '81
Gross Profit on All Labor and P&A Sales	+ 8.6%
Repair Orders Written	— 7.7%
Total Labor Sales (Customer & Warranty)	+ 2.0%
Shop Parts Sales (Customer & Warranty)	+11.6%
Sales of All P&A	+11.8%

*—Survey by Automotive News shows that dealers' service and parts business in January, 1982 was 105.3 percent of business in January, 1981.

VW and GE work out a deal

Detroit robot exhibit jampacked

By Roger Rowand
Engineering Editor

DETROIT. — On opening day of the Robot Show here, security guards were forced to allow visitors into the exhibit hall a few at a time because of jam-packed overcrowding.

The elbow-to-elbow, back-to-belly Cobo Hall crowds were just one indication that the dawn of the robot era has come.

Industry is perched on the lip of a day sure to quickly include a period of corporate consolidations, sale of entrepreneurships to big outfits, the demise of some firms and back-scratching technical agreements between business organizations on a global basis.

One of the latter such arrangements was announced on the eve of Robots VI, sponsored by Robotics International of the Society of Manufacturing Engineers and the Robot Institute of America, both based in Dearborn.

The announcement was of an agreement covering robot technology interchange between General Electric Co. and Volkswagenwerk of West Germany. In addition to trading know-how, GE will market VW robots in the U. S.

The robots are VW-designed and will be produced by VW in Germany until GE tools up. They have been available commercially in Germany in a limited way for several years.

GE now will market 11 robot models ranging in price from $50,000 to $125,000 each. Until now, it has offered no heavy-lifting, point-to-point models.

• Jules A. Mirabal, general manager of GE Automated Systems, called the agreement a major step in GE's drive to become a leading supplier of industrial robots. Some industry sources say the robot industry

Stempel maps task at Chevrolet from a corporate view

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Returning from Europe to take the helm of Chevrolet Division, Robert C. Stempel is prepared to bring to the job a global and a General Motors corporate perspective in dealing with the challenges that lie ahead.

Stempel was in Los Angeles to receive Motor Trend's Car of the Year award for the Camaro Z-28.

His appearance here came just days after he returned from Europe and, consequently, Stempel said he hasn't set many goals yet and intends to do so only after meeting with his staff. "Obviously, one of our goals is going to be to increase sales," he said.

Chevrolet's fortune has been sagging of late, with the division's share of General Motors' sales decreasing from 42 percent in 1980 to 38 percent in 1981. However, Stempel is not so concerned with Chevrolet's share of the pie, but rather how big the pie is for GM.

"Coming back to Chevrolet, my view is somewhat different," he said. "I'm not so much worried about those sister divisions as I am about those guys who are not part of the corporation.

"I have to look at this from a GM basis," he said of market share. "If GM can garner 50 percent of the market, so be it. Now, if the whole 50 percent happens to be Cadillac, also fine. What I'm saying is that within the GM organization, we've got to have the flexibility to be able to move with the market.

"The objective has to be as a corporation to get our share of the market. We want to maximize that."

• Stempel does hope that Chevrolet can improve its sales as GM as a whole moves forward, although getting back to what has been Chevrolet's "traditional" market share may not be possible. "That's because the market has changed," he said.

"The typical broad ownership base is not there. You don't have to start at Chevrolet or whatever," he added, referring to the historic strategy of getting first-time buyers into a Chevrolet and then moving them up.

"I'm not hung up on any specific targets," Stempel continued, and added that the division builds many products that are used by other divisions. "It's more important for GM to get the share of the market. As general manager of Chevrolet, I'm going to be doing everything I can think of to get the biggest chunk of the business."

While there are no immediate changes in the offing for Chevrolet's organization, Stempel said that one of the first items on his agenda is to reassess Chevrolet's image.

"I think that's one of our critical marketing questions," he said.

During his tenure at Pontiac, work was begun to define a new image for that division and already that program has begun to bear fruit.

"There's no doubt in my mind that Pontiac has crystalized even further their image and what their target market is," he said. "Certainly, at Opel, we spent a great deal of time finding out what Opel was, what Opel is and where it should go.

• "More and more the customer is looking for clearly defined efforts," he added. "They want to know if you are really in the luxury end, or are you going to be all things to all people and what is the objective of your product. Certainly at Chevrolet, we'll be trying to find that clear statement of what Chevrolet is, who the potential buyers are and where our market is."

With that information in hand, Stempel said the division will be able to strengthen its efforts where it will do the most good and perhaps back out of other areas where Chevrolet has not been successful.

"There is no one car that's going to satisfy all," he said. "What we have to do is capitalize on our strengths. (We have to) find out who our target customers are and sell to them."

Stempel said that in the next few weeks a clear statement of Chevrolet's image may emerge.

The need for the definition of Chevrolet's image is the result of the dramatic changes that have occurred in the auto market, he said.

"The ballgame has changed," Stempel said. "The automobile business is not going to be what it was 10 years ago or a year ago. It is different and it is never going to go back. The days of supermarket shopping with 500 cars on the lot is going to be behind us. It's going to be a consumer's market."

• Stempel said the industry is faced with serious competition from overseas, dealers with tremendous investment in facilities and inventory and a customer that is no longer brand loyal.

"The customer is out for Mr. Customer," Stempel said. "He wants the most for his dollar. The customer is becoming more sophisticated. He no longer wants a car because it looks pretty or his father had a Chevrolet. Those days are gone. We've got to learn to market to that.

"We have to be sure they understand our strengths, where we're going and have a clear definition of ourselves so they know who we are."

While the customer is no long-

Subaru a la Solaire

Subaru GLF and DL models are available as soft-top convertibles through dealers participating in Solaire's conversion market. Solaire, headquartered in Santa Ana, Calif., has been making Honda Prelude convertibles since 1980. The Subaru conversion maintains original rear-seating capacity.

February total for domestics is lowest since 1962

U. S. and import sales dip for month

By Jenny L. King
Staff Writer

February new-car sales were down across the board. Domestics reported their lowest total since 1962, while imports, of which the Japanese-built segment has been running 79 percent, reflected the voluntary restraint agreement between Japan and the U. S. and were down 20 percent from last year.

Tables on Page 33

Total sales for the month were 632,203, down 17.22 percent from 763,695 in 1981. Domestic auto makers retailed 456,942, down 15.94 percent from 543,593. Import sales numbered 175,261, down 20.47 percent from 220,372.

Industry sales for the first two months totaled 1,166,482, down 17.40 percent from 1,412,192 a year ago. Domestic year-to-date sales were off 18.58 percent, to 825,080 from 1,013,425. Sales of imports through February totaled 341,402, down 14.39 percent from 398,767.

Total sales of Japanese-built cars for the 11 months beginning April 1, 1981, were an estimated 1,599,000 units, coming very close to the agreed-upon restricted amount of 1.68 million through the end of this month.

In February, General Motors sales dropped 16.49 percent, to 276,383 from 330,957 in 1981. Ford Motor Co. sales totaled 110,932, down 8.45 percent from 121,172. Chrysler Corp. reported a sales decline of 12.19 percent, to 55,515 from 63,225. American Motors sales of 7,201 were down 43.49 percent from 12,743, and Volkswagen of America plunged 55.40 percent, to 6,911 from 15,496.

GM earned 60.49 percent of the domestic market, down from 60.88 percent a year earlier. Ford claimed 24.28 percent, up from 22.29 percent. Chrysler earned 12.15 percent, up from 11.63 percent. AMC slipped to 1.57 percent from 2.35 percent, and VWoA pinched off 1.51 percent, down from 2.85 percent.

Imported cars accounted for 27.72 percent of the February new-car market, second largest percentage for the month and down a percentage point from the record 28.82 percent notched in 1981.

Top import Toyota had a decline of 30.01 percent, to 40,586 from 57,985 last year. Datsun was down 13.18 percent, to 35,917 from 41,372. Honda pulled back 13.83 percent, to 30,333 from 35,202. Subaru was up 6.02 percent, and Mazda was off 33.56 percent.

Where Auto Market was in February

UAW council to meet on resuming GM talks

By Marjorie Sorge
Labor Editor

DETROIT. — The UAW-General Motors Council is scheduled to meet this week to decide whether negotiations should be resumed with General Motors Corp.

Talks with GM broke off Jan. 28 without an agreement.

But, General Motors must come up with an agreement which shows as "much imagination and ingenuity as Ford" if it wants to reach a new contract with the UAW soon, according to UAW President Douglas A. Fraser.

At the signing of the new Ford pact last week, Fraser told reporters the union would begin to take a reading of the membership to see if resuming negotiations with GM is the wish of the rank-and-file. Currently, union officials are saying that the members are more willing to resume talking as GM plants are being closed at a rapid pace.

Fraser said this is not a blackmail technique on GM's part but only the result of poor economic times. GM has already announced the closing of seven plants and has eliminated numerous shifts throughout its plant network.

If any agreement is reached with GM, Fraser said, it must include a stipulation that all announced plant closings must be reviewed.

The UAW is also interested in continuing with the framework it submitted to GM when negotiations began in early January. That included passing any cost savings generated by concessions from the union on to the consumer "penny for penny" in lower prices on cars and trucks.

Also, an independent CPA was to be hired to make sure all the cost savings were passed on to the consumers, in effect, opening GM's books to scrutiny.

Recently, F. James McDonald, GM president, told reporters at the NADA convention that GM no longer intends to pass along any savings to the consumer. When such a plan was announced in January, new-car sales fell off drastically.

• Fraser said he hadn't talked to GM officials since talks broke off in late January and is not sure if "McDonald's position is official or if he is just making conversation."

GM Chairman Roger B. Smith reiterated McDonald's remarks

New format draws criticism

GM planning to split shareholder meeting

By Edward Lapham
Financial Editor

General Motors has changed the ground rules for its May 21 annual meeting and has stirred up some shareholder criticism.

GM has decided to divide the annual meeting into two parts: A morning statutory meeting at Detroit's Fisher Theater which will include election of directors, voting on management and shareholder proposals included in the proxy and other mandated items of business, and an afternoon session which will be a shareholder forum where a panel of GM vice presidents and group vice presidents will answer general questions about the company's business.

Traditionally, GM has included two lengthy general topic question-and-answer periods in its annual meeting.

"This will be the stormiest, most tumultuous GM annual meeting in recent history," said Lewis D. Gilbert, shareholder advocate and co-founder of Corporate Democracy Inc.

Gilbert, who has attended 33 consecutive GM annual meetings and is generally considered to be the dean of shareholder advocates, is no young radical. He has been saluted publicly at annual meetings by GM Chairman Roger B. Smith and former chairman Thomas A. Murphy for his contributions and for having been "a positive force" on behalf of shareholders.

Gilbert said the directors should be present for the question-and-answer periods and that he intends to use parliamentary procedures to try to force inclusion of general question-and-answer periods.

Gilbert said the split session is a regressive step in corporate democracy.

"It is the worst throwback possible," he said. "If necessary, we'll go to jail. This move will bring out all the activists. They'll need 10 paddy wagons to carry us all away."

• Wilma Soss, another well-respected shareholder advocate and long-time GM annual meeting attendee, said she intends to include in the proxy a proposal to limit the term of outside (non-GM-employes) directors to seven years and that she, too, believes it is essential that the directors be present for the question-and-answer periods.

"This is shaping up as probably the stockholder meeting of the year," she said. "All we want is a normal meeting."

John W. McNulty, GM vice president — Public Relations Staff, said the corporation is trying the new annual meeting arrangement not to avoid shareholder questions but rather to be able to answer more questions.

McNulty said that since GM began holding its shareholder forums in 1978, it has invited more than 314,000 shareholders

Chrysler Town & Country rolls

Production of Chrysler Town & Country wagons began at the Newark Assembly Plant last Tuesday (Feb. 23). The station wagon, which will be marketed under the Chrysler LeBaron nameplate, will account for about 15 percent of the plant's daily rate, according to plant manager G. B. Ruiter. The plant currently builds 796 cars a day on two eight-hour shifts.

Chevrolet loses domestic lead for 1st time since 1970

Oldsmobile tops in sales per dealer

Continued from Page 1

from 251; Buick edged ahead to 244 from 239; Cadillac went to 144 from 133; Plymouth soared to 129 from 97; Mercury rose to 127 from 117; Dodge climbed to 126 from 108, and Imperial went to 11 sales per outlet from 6 a year earlier.

In the make standings, Oldsmobile took over first place from Chevrolet. Buick held onto the third spot, while newcomer Volkswagen snatched fourth place from Ford (which was first back in 1970). Pontiac slipped back to sixth, Cadillac was seventh, Plymouth leaped over Dodge and Mercury to eighth, followed by Mercury, Dodge, and AMC. Lincoln moved ahead of Chrysler and took 11th place, and Imperial brought up the rear.

SALES PER OUTLET BY MAKE

Sales per U. S. new-cer franchise

Lincoln	43	45	80	115	112	76	62	56	76	60
Chrysler	35	50	76	89	96	86	70	36	51	52
Imperial†	11	6	—	—	—	—	—	—	—	—

*—VW was counted as an import before 1981.
†—Imperial was not marketed as an individual make during the 1970s. It was part of the Chrysler line from 1971 to 1975.

The VW Rabbit was a shoo-in for top average nameplate in 1981. VW dealers sold an average of 160 Rabbits each during the year. It was followed by standard Cadillac at 87, Oldsmobile Cutlass Supreme at 83, Plymouth Reliant/Volare at 78 and Buick Regal coupe at 71.

Sixth was Buick Skylark at 68, followed by Chevrolet Chevette at 63, Dodge Aries/Aspen at 62, Oldsmobile Cutlass sedan at 58 and Ford Escort at 57.

A year ago the top ten nameplates in sales per dealer were: Oldsmobile Cutlass Supreme (79), standard Cadillac (78), Buick Regal coupe (66), Chevrolet Citation (65), Chevrolet Chevette (65), Oldsmobile Cutlass sedan (65), Buick Skylark (58), Ford Fairmont (54), Plymouth Horizon (51) and Buick Century (49).

• In market class categories, the VW Rabbit was top-average subcompact with its 160 figure. Second was Chevette at 63 followed by Ford Escort at 57. A year ago the top three were Chevette, Horizon and Dodge Omni.

Reliant/Volare aced out the competition among compact nameplates, with a 78-per-dealer average. Second was Skylark at 68, with Aries/Aspen third at 62. In 1980, the top three were Citation, Skylark and Ford Fairmont.

Cutlass Supreme again was the top intermediate, followed by Regal coupe and Cutlass sedan. These mirrored their 1980 rankings.

In the standard-size category Oldsmobile 88 took firm hold of first place, with standard Chevrolet second and Buick LeSabre moving into third. The previous calendar year, it was Olds 88 and Chevrolet tied for first, followed by standard Pontiac and LeSabre.

Cadillac (Fleetwood and DeVille) was best-average luxury nameplate with 87 per dealer, followed by Cadillac Eldorado at 34 and Lincoln Mark VI at 21. They retained their 1980 rankings, as well.

UAW council plans to meet on resuming talks with GM

Continued from Page 3

when he spoke at the Chicago Auto Show in late February.

Any resumption of negotiations with GM would require a meeting of the UAW's Council and a clear mandate from the membership, Fraser said.

Meanwhile, Ford Chairman Philip Caldwell said March 1 (the day of the new contract signing) is "a day we should all remember as a beginning of a new beginning at Ford Motor Co."

He said the union and the company have "found a way to deal with each other in a spirit of cooperation not confrontation" and indicated there may come a time when there aren't any sides at the bargaining table.

The new Ford-UAW contract is based substantially on the good faith of both parties and is the beginning of a more trusting era of labor relations, according to both Ford and UAW officials. Much of the pact is loosely worded, giving both parties flexibility. According to Caldwell, the company will demonstrate that "this contract is truly a living document."

One item that will be discussed jointly during the 31-month pact is the high cost of insurance. Both parties will work to lower that price, sources say.

The new agreement gives high-seniority workers guaranteed income if they are laid off and provides a 24-month moratorium on plant closings related to outsourcing.

J2000 pep, Firebird price to get Pontiac ad attention

By Joseph Bohn
Marketing Editor

Pontiac will reintroduce its J-car in a new higher-performance version and it is running new price ads on the base Firebird in an attempt to broaden the spectrum of buyers.

At the same time, Pontiac will sustain regular advertising on Firebird, notably Trans Am, and the 6000 line, as the major focus of its spring effort.

No special value package models or spring incentive program for sales people is being offered, according to James Graham, director of merchandising.

Graham said Pontiac's reintroduction of the J2000 will begin in May with the advent of the new overhead-cam fuel-injected engine (OHC-EFI).

The engine answers critics of J2000, who complained about low-end torque.

"Economy gets a new kick" is the most probable headline for the new ads, Graham said, among several currently being tested.

"J2000. OHC - EFI (engine). Now, the excitement really begins," is the signature of the ads.

"We're trying to overcome initial complaints about the J-2000 being lazy on the low end," Graham said.

"The new engine is dynamite. It's not up there with the crossfire V-8 for Trans Am, but it is a pleasing car," he said, adding that the hatchback will probably be featured in the ads.

As part of its "fairly extensive" campaign on J2000, "We'll be converting a great deal of (already purchased) ad time and space," rather than increasing previous spending plans, Graham said.

"We'll run fairly heavy in May and June. Then, of course, we'll be into buildout. Our schedule lightens up a lot going into July and August," he said of the overall divisional effort.

A new commercial, breaking this week on Firebird, features the base model at a "surprisingly affordable price," Graham said.

The $7,996 base-priced model is featured in an ad that highlights "a great looking lady (successful career woman) popping out the door" rather than the macho mustached man in Trans Am ads.

D'Arcy MacManus & Masius, Bloomfield Hills, Mich., is Pontiac's agency.

Crowds jampack robot show; VW and GE sign deal

Continued from Page 1

will have sales of $3 billion a year by 1991.

The agreement with VW is for a five-year exchange of technologies and puts five material-handling robots in GE's stable. Five-year exclusivity is given for any modifications and improvements that at least reach the prototype stage, Mirabal said.

Between GE and VW, there are about 700 robots at work in factory situations. That brings practical experience into the picture, he said.

Simply put, VW has the robots and GE has the drives, controls and sensors.

Mirabal said the technology agreement might extend further into the factory automation field.

Among new robots introduced at the show were entries from such high-technology firms as Bendix, Westinghouse, GE and IBM.

The show included some 100 robots at work, going through their paces for the 12,000 attending the three-day event.

Some 80 authorities in the world of robots made technical presentations in 20 sessions and special forums.

Inventor sues three makers on wiper system

DETROIT. — Patent-infringement suits against Chrysler Corp., Volkswagenwerk and Audi NSU Auto Union were filed in federal court here last week by Robert W. Kearns.

Kearns, who holds 20 patents on intermittent windshield wiper systems, charges in the suits that systems used by these companies infringe on his patents.

The suits ask that the three firms be enjoined from making or selling cars with systems Kearns says are infringing. Kearns, an inventor and retired professor of engineering at Wayne State University, seeks to manufacture the system for sale to the auto industry.

He also has suits pending against Ford Motor Co., Daimler-Benz and Porsche.

2,185,489 tallies are down 11.8 percent from previous year

'81 registrations sink to 10-year low

Registrations of new trucks of all types in the U. S. in 1981 were the lowest in 10 years, and it marked the third year in a row that tallies have receded after reaching the alltime high in 1978.

R. L. Polk & Co. reported 2,185,489 new-truck registrations last year in 49 of the 50 states which release these figures, a decline of 11.8 percent from the year-earlier 2,476,777 and only 9.6 percent higher than the 1,993,186 units registered in 1971, the low point in the last decade.

In 1978, a record 3,963,340 new trucks were registered in the U. S. Heavy trucks reached their peak in 1979 with a total of 213,174 tallies. Since 1971, total U. S. truck registrations have topped the two-million mark five times and the three-million mark on five occasions.

Last year, registrations were down in all three market segments and seven of the eight

Table on Page 16.

weight classifications. But the count for non-captive Japanese compact pickups was slightly higher than the 1980 total.

During the year, 1,970,114 light trucks were tallied, a drop of 11.1 percent below the previous year's 2,217,085.

• Group 3 was the only one of the three light-truck classifications to show an increase in 1981. The count was 54.7 percent higher than the previous year, 12,491 versus 8,076, and reflected growing strength in the leisure-vehicle market.

In Group 1, the decline was tempered by the rise in sales of both the imported and domestic compact pickups. There were 1,994,006 registrations, a decline of only 3.3 percent from the previous year's 1,130,942 units.

The Group 2 total, which has been falling steadily since the sharp increase in fuel prices early in 1979, was down 19.9 percent from the 1980 figures, 863,617 versus 1,078,067. Some growth in 1982 is anticipated with a resurgence in demand for recreation vehicles and van conversions.

The non-captive imported compact pickups had 317,247 registrations last year, an increase of 6.4 percent over the previous year's 294,224.

Group 1 imports were up 6.4 percent, from 294,199 in 1980 to 312,913. There were 4,333 Group 2 tallies during the year, versus 14 in 1980. In the previous year, there were 11 Group 3 imported pickup registrations. In 1980, there was only one.

• All three medium truck groups suffered significant downturns in 1981, and prospects for a meaningful upturn in 1982 are not bright. Only 54,031 medium units were registered in 1981, down 18.5 percent from the year-earlier 66,282.

Group 6, the largest medium weight class, was off 18.5 percent last year, dropping from 63,790 tallies in 1980 to 52,197. The Group 5 total of 1,823 units was down 20.4 percent from the previous year's 2,289. Only 11 Group 4 trucks were registered in 1981, down 94.6 percent from the 203 tallied in 1980.

There were 161,344 heavy-truck registrations in 1981, a decline of 16.6 percent from the previous year's 193,410. Group 7 was off 17.4 percent, from a record 79,719 units in 1980 to 65,872. The Group 8 count of 95,472 tallies was 16 percent lower than the year-earlier 113,691 units.

Ford was No. 1 in total truck registrations in 1981 for the fifth consecutive year, topping runnerup Chevrolet by almost 50,000 units. Ford had 697,213 tallies during the year, compared with 650,460 for Chevrolet.

Volvo was the only nameplate to show an increase in unit registrations in 1981, rising from 1,008 in 1980 to 1,644.

The miscellaneous group,

Continued on Page 35, Col. 1

'81 registrations of heavy trucks lowest since 1977

Registrations of new heavy trucks in the U. S. in 1981 dropped 16.6 percent to 161,344 units, compared with 193,410 in 1980, according to R. L. Polk & Co. statistics.

The 1981 total was the lowest since 1977, when 154,435 Groups 7 and 8 new vehicles were registered. The alltime high was reached in 1979 with a total of 213,174 units.

Heavy-trucks tallied in the final month of 1981, however, were down only 4.4 percent to 14,339 units, compared with 15,005 in December, 1980.

Registrations were weaker last year in both heavy-truck classifications. The Group 8 count in 1981 was 95,472 units, down 16 percent from the year-earlier 113,691. There were 65,872 Group 7 tallies, off 17.4 percent from the 79,719 vehicles registered in 1980.

Although seven nameplates and the miscellaneous groups had a gain in percentage share of total 1981 tallies, Internation-

recreation on wheels

Gains achieved by all types of units

'81 RV shipments rose 31.8 pct. despite slump

Despite the sluggish economy throughout 1981, shipments of recreational vehicles from manufacturers to their dealers in the U. S. were 31.8 percent higher than the previous year, with increases in all product categories.

The Recreation Vehicle Manufacturers Assn. reported that its members delivered approximately 239,100 units of all types to retailers during the last year, compared with 181,400 in 1980.

The Index of Consumer Sentiment in the December survey was 64.3, reversing part of the November decline (62.5) and indicating the presence of offsetting trends, an RVIA spokesman said.

"Concern over rising interest rates and inflation dropped considerably during the three previous months, only to be replaced by the concern for spreading unemployment," he added.

Multi-use vehicles led the way in 1981 with 99,800 units, an increase of 39.8 percent over the year-earlier 71,400.

RVIA defines a multi-use vehicle as one designed for the transportation of people and/or property, and altered by the RV manufacturer for esthetic or decorative purposes.

These changes may include windows, carpeting, paneling, seats, sofas and a variety of accessories. The multi-use van conversion is an example of this type of vehicle.

• Shipments of all towable RVs were up 27.6 percent in 1981, and were the only type of vehicles to exceed the 100,000 mark. There were about 103,900 deliveries during the year, compared with 81,400 the previous year.

Travel trailers, including the fifth-wheel models, accounted for almost two-thirds of the shipments of towable units. During the year, 63,800 units were delivered by manufacturers, an increase of 22.9 percent over the year-earlier 51,900.

Folding camping trailers, the smallest and least expensive units, were up 42.9 percent, from 24,500 in 1980 to 35,000 last year.

With the slowdown in the economy and the drop in discretionary income, the fold-down trailer is considered by many in the industry to be the ideal RV-lifestyle entry for young families.

For many years, the slide-in truck camper has been declining in popularity, but shipments were slightly higher in 1981. Manufacturers shipped about 5,100 units during the year, an advance of 2 percent over the year-earlier 5,000.

Shipments of all types of motor homes were up 23.8 percent in 1981 to approximately 35,400 units, compared with the previous year's 28,600.

Conventional motor homes (Type A) rose 46 percent during the year, from 9,800 units in

Coachmen ends 1981 in the black; sales rise 64 pct.

MIDDLEBURY, Ind.—Coachmen Industries, Inc., has announced that in spite of continuing uncertainty in the economy, the company registered a significant increase in sales and returned to profitability in 1981.

Net income for the calendar year was $2,094,614, compared with a loss of $7,582,175 the previous year. The results were accomplished on net sales of $205,510,117, an increase of 64 percent over the $125,304,885 reported in 1980.

Thomas H. Corson, chairman and chief executive officer, said the turnaround "brought to fruition the hard work and sacrifices made during the difficult years of 1979 and 1980. While there may still be a few clouds on the horizon, we are confident the worst is over."

Sales of Coachmen's principal business, recreational vehicles, were up 45 percent in 1981.

Corson attributed this increase to an overall improvement in the RV market along with "an increase in the market share for our companies. Even though the fourth quarter was negatively impacted by deep-

Continued on Page 35, Col. 5

RV sales exceed expectations at Chicago show

ARLINGTON HEIGHTS, Ill. — Recreation vehicles worth from $2,500 to $60,000 sold at the recent RV Camping and Travel Show held at Arlington Park here.

Bill Kervin, Master Campers, Inc., Palatine, Ill., said the show was more productive than the exhibitors had expected. Held during the last week of January in the midst of Chicago's cold spell and on Super Bowl Sunday, the exhibit was bucking a number of events.

"But attendance was better than it has been in the last three years, and a number of exhibitors had good sales," said Kervin, who also was show manager. "We found a positive attitude among those who want to go camping, and all of the exhibitors were pleased."

Sales were better than exhibitors had anticipated, and Kervin said he knew of at least 18 vehicle sales.

"One of our dealers, Clyde Peaster, Peaster Motor Homes, Wheeling, Ill., has made quite a study of sales of RVs, and he says they are really the leading indicator of what's ahead," Kervin said. "With good sales at this show, we expect a good year ahead."

Lance's downsized fifth-wheeler

Lance Camper Mfg. Corp., North Hollywood, Calif., has introduced this new 19-foot mini fifth-wheel trailer designed for towing by compact pickup trucks. The aerodynamically styled, lightweight unit is offered in two floor-plans.

DATSUN "200 SX" CONVERTIBLES
"Newest and Fastest Selling Roadster"

"3rd" Successful Year in Production

American Custom Coachworks, Ltd. builds these sporty convertibles for Datsun Dealers. They have proven to be a successful and profitable answer to the Mercedes SL Roadster—the finest quality convertible for "1982" sales. This showroom traffic builder is superbly engineered and styled. Base units can be drop shipped to American Custom Coachworks, Ltd. plants or there are some open factory (pool cars) presently in build that are available.

★—No registrations for Oklahoma, 1981 and 1980.

★—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are Chevy-Van, El Camino and Blazer; Dodge, compact trucks; Ford, Econoline, Ranchero and Bronco; GMC, Vandura, Jimmy and Sprint; International Scout, Jeep, CJ-5, CJ-6 and Commando. ★Miscellaneous includes imports, Divco, Hendrickson, Oshkosh, etc.

—Compiled from R. L. Polk & Co. data.

Gains achieved by all types of units

'81 RV shipments rose 31.8 pct. despite slump

Continued from Page 14

1980 to 14,300. Chopped vans, including Type C mini, low-profile and compact motor homes, totaled 17,300 units in 1981, up 5.5 percent from the year-earlier 16,400.

Van campers (Type B) were 58.3 percent higher than the 1980 count, climbing from 2,400 units in 1980 to 3,800. The Type B unit is a panel van to which the RV manufacturer adds two convenience features, like sleeping, kitchen and toilet facilities.

• In the final month of 1981, manufacturers shipped 14,800 units of all types to dealers, an increase of 5.7 percent over the 14,000 vehicles delivered in December, 1980.

December also marked the 11th consecutive month in which RV shipments exceeded those in comparable months the previous year.

Motor homes were the weakest category in December. The total of all units was 2,100, down 12.5 percent from the year-earlier 2,400. Shipments of van campers, however, doubled during the month, rising from 200 in 1980 to 400.

Shipments of Type A conventional motor homes were down 10 percent in December, dropping from 1,000 in 1980 to 900 units. Chopped vans totaled 800 in the final month, down 33.3 percent from the year-earlier 1,200 units.

Shipments of multi-use vehicles were 11.5 percent higher in December, from 6,100 units in 1980 to 6,800. Total towable-RV deliveries rose to 5,900 units, an increase of 7.3 percent over the previous December's 5,500.

Folding trailers were 15.8 percent higher, from 1,900 units in 1980 to 2,200. Travel trailers totaled 3,500 units, a gain of 6.1 percent over the year-earlier 3,300. Truck campers, on the other hand, slumped 33.3 percent in the final month, from 300 in December, 1980, to only 200 units.

Registrations sink to 10-year low in truck market

Continued from Page 14

which includes the non-captive imports, had the biggest unit gain and increase in penetration during the year.

Its 323,405 tallies accounted for 14.80 percent of the industry total, up 2.64 percentage points from the year-earlier 12.16 percent on 301,223 registrations.

• In the 10-year period since 1971, there have been some dramatic changes in the truck market, especially in the medium and heavy segments.

Registrations of mediums in 1971, for example, were 47 percent higher than the heavy-truck total, 186,602 versus 126,821. All three medium weight classes were far stronger than they are today. In 1971, there were 130,524 Group 6 tallies, 42,297 in Group 5 and 13,781 in Group 4.

The heavy-truck count in 1971 was only 126,821 units, compared with last year's 161,344. The Group 8 total was almost identical, 95,480 in 1971 versus 95,472 last year. Group 7 has more than doubled in size, rising from 31,341 in 1971 to 65,872 last year.

There were almost 300,000 fewer light-truck registrations 10 years ago, 1,970,114 versus 1,679,805.

Then, as now, Group 1 was No. 1 but a little more so, 1,216,390 versus 1,094,006. Group 2 is much stronger today—863,617 in 1981 as against 449,805 then. Group 3 is about the same, 12,491 today versus 13,568.

'81 registrations of heavy trucks lowest since 1977

Continued from Page 14

al and Volvo were the only makes with an increase in unit registrations during the year.

International, dethroned by Ford as the heavy-truck leader in 1980 because of a shortage of vehicles resulting from a six-month UAW strike, regained the lead in 1981 with 40,539 tallies, up slightly from the year-earlier 40,180 units.

In 1981, International registrations accounted for 25.13 percent of the industry total, an increase of 4.35 percentage points over the previous year's 20.78 percent.

Volvo had 1,629 registrations of Group 7 and 8 trucks in 1981, a gain of 62 percent over the year-earlier 1,006 units. Its share of the industry total rose from 0.59 percent in 1980 to 1.01 percent.

Buick Hawk dealers elect new officers

FARGO, N. D.—North Dakota and western Minnesota Buick dealers of the Buick Hawk Dealer Advertising Assn., meeting here, elected three officers to three-year terms.

New officers are Tim Corwin, Tim Corwin Buick, Fargo, N. D., president; Tom Kenville, Thomas Pontiac-Buick-Datsun, Grand Forks, N. D., secretary-treasurer, and Don Frederick, Frederick, Inc., Jamestown, N.D., director.

First electric truck for Dodge

What is believed to be the world's first assembly line commercial vehicle powered by electricity has been unveiled by Karrier Motors in the UK. Known as the Dodge 50, it will be built at the rate of 20 a month alongside conventionally engined models. The power unit was developed in conjunction with Lucas Chloride EV Systems. Karrier is jointly owned by Peugeot SA and Renault Vehicules Industriels, of France.

New-car market in Italy picked up speed in 1981

TURIN. — Italian drivers bought new cars in record numbers last year. The final tally was 1,740,000.

One reason given for the sales surge was that consumers' previous cars were getting too old to repair and maintain with the high prices charged for parts, for mechanics' services and for gasoline.

Fiat sales of 780,000 accounted for 44.85 percent of the market. The company's Lancias and Autobianchis added another 114,000 units, bringing its share to over half — 51.41 percent — of the Italian new-car market.

Imports from various countries combined to take 41 percent of the whole, leaving precious little to the remaining Italian car makers.

Alfa Romeo was down 5,000 units, to 112,500 (6.47 percent of the market), and Innocenti dropped 9,000 units, down to 20,250 (1.16 percent).

With a sharp trend in favor of cars powered by engines 1,300 cc or smaller, Fiat continues to be in a dominant position, while Alfa Romeo has only some of its Alfasud models within the lineup of most popular cars.

Innocenti by all accounts should have done better than the record shows, as the company offers small cars with 1.0-liter engines at very attractive prices, but the launch of the new Mini Metro by BL, coupled with confusion about the future of Innocenti and its products, detracted from sales.

With markets elsewhere in the world suffering significant sales depressions, foreign auto makers have been competing to get a bigger slice of the Italian market. Volkswagen and Ford got the best results, with sales up by 20,000 units, to 92,400 for VW, and Ford, buoyed by Fiesta and Escort, up 15,000 units to 92,638, or 5.33 percent of the market.

BL is winning public favor at a promising pace, according to the Turin report. For the first time in many years, Renault made no progress from its second-place 10 percent of the Italian market.

Banner-breaking performance

Louis E. Lataif, Ford Division general manager, drives a 1982 Ranger pickup through a banner announcing Ford Division's fifth straight calendar year of U. S. truck sales leadership. Ford dealers sold 716,849 units during the year, 41,221 more than the Chevrolet total.

Mexican company formed to build plastic car parts

MEXICO CITY. — The government-owned Diesel Nacional, S.A., an automotive and industrial group, has announced plans for a new joint manufacturing company, Plasticos Automotrices Dina, S.A.

It will produce a wide range of fiberglass-reinforced plastic components and parts for the automotive industry. The new firm plans to invest $21.6 million in its manufacturing facilities, to be built at Ciudad Sahagun, in the state of Hidalgo.

Technology will be supplied under a licensing agreement with the U. S.-based Budd Co., which also operates several plants here that manufacture automotive parts and components.

Articles to be produced by Plasticos Automotrices DINA include chassis parts, instrument panels, transmission covers, truck hoods and interior trim components.

Safety exemptions granted for year to replicar firm

WASHINGTON. — NHTSA has approved several one-year exemptions from safety standards for Shay Motors Corp. (previously known as Model A and Model T Motor Car Reproduction Corp.).

Shay claimed compliance would cause substantial economic hardship.

Earlier, the Model A—a replica of a 1928 Ford Model A roadster—and a similarly-styled pickup truck had been granted relief three times from all or parts of seven standards.

Shay, while able to meet three standards, recently requested one-year exemptions from standards covering head restraints (202), impact protection from the steering control system (203), side door strength (214) and fuel system (301).

The company had made 4,500 Model A's by June 25, 1981.

For its second fiscal year of operation ending March 31, 1980, it had a net loss before taxes of about $300,000, but it turned the corner in its third fiscal year, and reported a net profit of more than $1.4 million.

The company has invested in its second product — the Shay '55 Bird, a replica of the early Thunderbird, and as of July, 1981, had made 500 of them.

Shay said that because of the recession, it has temporarily laid off workers. With the exemptions, it said it hopes to recall some workers and to increase production of the Bird.

Coachmen ends 1981 in the black; sales rise 69 pct.

Continued from Page 14

ened recession, improved consumer confidence and an end to concerns over fuel availability contributed to our improved performance."

Corson said Coachmen's other operations, including pleasure boats and RV parts and accessories, enjoyed similar sales growth during the year. In addition, he added, Marlette Homes, the company's manufactured-housing segment "contributed significantly to the sales increase" after its acquisition last April.

"We expect that 1982 will generate its share of challenges as our country continues through this turbulent period of economic adjustment," Corson continued. "We see many positive signs in the marketplace.

"Dealer inventories remain at low levels and early retail-show activity for RVs indicates good demand for spring delivery," he observed. "Further, we maintain our optimism about the long-term growth of the manufactured-housing business. Overall, we expect to continue the improvement in sales and earnings begun in 1981."

May new sales manager

ST. LOUIS. — Walter May has been appointed sales manager, heavy-duty products, for the Aftermarket Division, McQuay-Norris, Inc., with responsibility for all activities for antifriction bearings and seals to Class Six, Seven and Eight truck parts distributors. He formerly was heavy-duty marketing manager for Wagner Electric Co.

Ad campaign in works; dealer complaints sought

CASA steps up delete-radio battle

WASHINGTON. — The Custom Automotive Sound Assn. (CASA) is calling on dealers to voice their complaints about factory coercion to buy CE radios and is working on an advertising campaign to tell consumers that delete options are available for radios.

"There are subtle ways the zone reps tie the availability of cars, service contracts and other dealer needs to the sales of factory radios," said James Cole, vice president of Southern Auto Sound and a CASA vice president.

"Many dealers are not well enough acquainted with the profit incentives and advantages of independent brands of radios," said Steven White, White Automotive Service.

"Don't hesitate to emphasize that the independents are the dealer's friends; the factory is not, and it cannot enhance the dealer's profit like the independents can," White added. "The industry will not see relief until we influence new-car dealers to complain about the pressure to buy factory radios."

The aftermarket automotive sound equipment industry has improved its competitive stand with the domestic and foreign car manufacturers during the past six months, according to CASA.

CASA officials said the industry is in a better position now to compete with Detroit because the factories can't sell the cars loaded with options. They have been forced by CASA to hold the line on radio standardization and General Motors has introduced stripped models of its J-cars.

CASA is an association of aftermarket manufacturers which represents the interests of the automotive sound equipment industry.

"Market conditions and CASA's presence in the industry as a watchdog for the independent automotive sound equipment industry have dictated a number of changes in favor of the independents," said Sidney Dickstein, Dickstein, Shapiro & Miro, CASA legal counsel.

• The association has filed lawsuits against GM, Volkswagen of America, Mazda Motors and Toyota charging that the manufacturers violated antitrust laws by making radios standard equipment in their vehicles.

The Mazda lawsuit was filed in January and is pending in a U. S. District Court in Seattle. The other suits were settled out of court, and the auto companies agreed to make radios delete options on many models.

Some of those agreements expire in 1983, but CASA is planning to renegotiate those plans prior to their expiration.

Radio delete options are now offered on more than three million new cars a year, according to Cheryl Hollins, CASA executive director. The association is currently working on a plan to educate new-car buyers about the meaning and availability of the radio delete option.

The essence of the consumer education program, "It's Your Choice," is to tell consumers who purchase any of the 91 models which feature a radio delete option that they may choose a factory installed radio, an independently produced radio available for sale through new-car dealerships or an independently produced radio sold at retail establishments.

CASA will tell buyers about the vehicles and inform them they should receive credit for the deleted radio.

"Literature will outline the advantages of independently produced sound systems as alternatives to factory installed radios as well as address the complex radio installation programs featured by each manufacturer or importer which offers the radio delete option," Hollins said.

"We cannot rely on the vehicle manufacturers to inform the car-buying public about the radio delete option. CASA's consumer education program is one of the most important means by which the independent automotive sound equipment industry can compete with Detroit," she said.

Some of the aftermarket manufacturers have also begun running ads which promote the choice of radios. CASA officials say the retail sector of the automotive sound industry can help expand the market share available to the entire industry by tying in with the consumer education campaign CASA is launching.

Some auto company ads also mention the availability of the radio delete option.

Jake Cash, Texas-Oklahoma Auto Sound, also urged the industry to assist CASA in informing dealers about the significance of General Motors' decision to end its Standard Radio Return Program.

The program allows dealers to remove the deletable standard equipment factory installed radio and return it to the factory for full credit against the dealer's parts account. The program will be terminated as of May 1, 1982.

CASA wants GM dealers to ask that General Motors continue the program beyond May 1.

Termination of the program will deny dealers much of the flexibility they now have in choosing alternative brands of sound equipment from the independents and will result in further erosion of the dealer's profits, CASA said.

According to Thomas Leary, GM general counsel staff, the company will terminate the Standard Radio Return Program on May 1. But, he said it is an option rarely used by dealers and is an administrative hassle.

"We have no sadistic motivation," he said. "Dealers who would like to do business with the aftermarket can take advantage of the delete option program."

Option packages which include a number of accessories sold at a package discount price, are another example of the factories' desire to realize profits that are not necessarily shared by dealers, CASA said.

"Many new car dealers are not aware of the lost profits that the packages represent," Cash said, citing an example of the low margin dealers may make on a package like the Oldsmobile WK7 package.

"If the car remains on the dealer's lot three months, by discounting 10 percent for the floorplan charge, the dealer may make only $8 on a package worth over $500."

Leary said a 10-percent floorplan charge for a quarter would mean a 40 percent interest rate for the year, which is much higher than the GM rate. He said dealers pay below the going interest rate for the first three months of any floor planning.

He said the added interest charge for a $500 option package would be at most $7 for the first three months with slight increases thereafter.

• CASA is also working on delete option agreements for Canada. CASA's agreements and understandings with GM, Chrysler, Toyota, Volkswagen and Subaru do not affect like vehicles sold in Canada. With the exception of about 40 vehicles offered with a radio delete option by Ford Motor of Canada, the delete option is nonexistent in Canada. (Of 91 new models available in the U. S. with a factory or port radio delete option, approximately 52 are sold with standard equipment radios in Canada.)

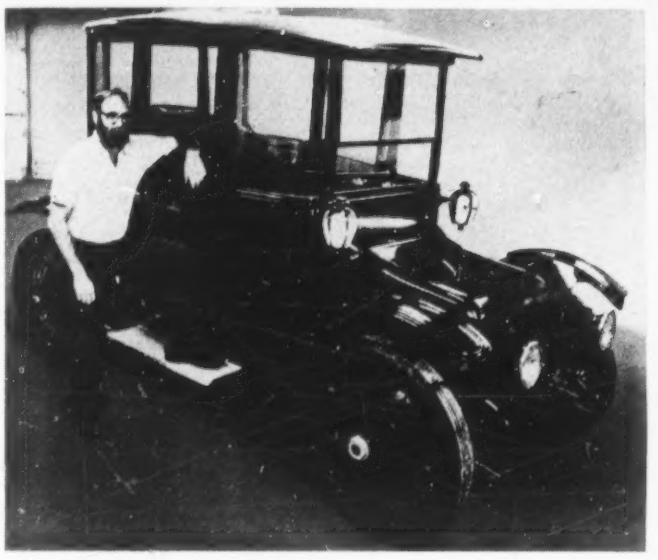
A preliminary investigation of the radio standardization program of General Motors of Canada begun earlier this year by the Canadian government is continuing and should be concluded within a few months, Hollins said.

CASA's 40 Canadian members have been supplying data to the Combines Office, which investigates antitrust matters, to document the decline in radio sales to GM dealers by the independents. CASA claims that GM of Canada is unlawfully monopolizing the automotive sound equipment market through radio standardization.

CASA said attorneys in Canada have reviewed the radio installation program practices of Ford Motor of Canada and have concluded that sales lost to Ford dealers by the independent automotive sound equipment industry have been sufficiently damaging to justify an investigation of Ford's program by Consumer and Corporate Affairs Canada.

While Ford offers a radio delete option on its Ford and Mercury models, it is capturing an increasing share of the sound equipment market in Canada through its radio pricing practices and its mobile installation facilities.

Both Ford and GM of Canada, CASA said, are illegally restraining trade in violation of the Combines Investigation Act, a statute comparable to U. S. antitrust laws.



Aluminum's a survivor

This aluminum-body 1914 Detroit Electric attracted lots of attention at the February Society of Automotive Engineers convention in Detroit. Once owned by General Electric scientist Charles Steinmetz, it was found abandoned in a field in 1964, was subsequently acquired by Union College, Schenectady, N. Y., and restored under the direction of Prof. David Ullman, shown here with it. The aluminum body needed only stripping, local filling and repainting, while steel work had to be replaced and wood framing and interior restored.

14,500 Horizons, Omnis recalled for suspension bolts

DETROIT. — Chrysler Corp. announced it is recalling 14,500 1980 Dodge Omnis and Plymouth Horizons to replace bolts in the front suspension system.

The affected cars were built during a three-week period in 1979, when a shipment of bolts from a supplier had been improperly heat-treated, a company spokesman said.

Chrysler said that under certain conditions, the ball joint attachment bolts may crack.

Hertz puts 20-city average at 47.3 cents a mile

Cost of operating compact soars

NEW YORK. — Average costs to own and run typical new compact-sized cars in 20 key cities soared to 47.3 cents a mile in 1981, 18 percent more than in 1980, and 51 percent more than in 1979, Hertz Corp.'s annual major-city operating expense study showed.

Los Angeles led the nation in high-cost driving for the third year at 57.9 cents a mile, while Detroit was least expensive, 41.9 cents, a 16-cent variation.

The 1980 figure for driving compact cars four years 10,000 miles a year was 40 cents a mile, according to the Hertz analysis, while 1979 expenses were 31.3 cents for all normal driving costs, except garaging and tolls.

The firm's new geographic expense variation estimate again ranks New York City the second-most-expensive area in the nation to own and operate an auto at 56.6 cents a mile. San Francisco, at 56.3 cents, was third, and Miami, 49.7 cents, fourth.

"Continued vehicle purchase price increases coupled with almost prohibitive car-loan interest rates account for most of the overall 24-month rise," the study said.

Average major-city compact-model purchase prices jumped to $7,694 in 1981 from $6,542 in 1980 and $5,136 in 1979. Loan rates went from under 13 percent to over 16 percent in the two years.

The 47.3-cent-a-mile major-city ownership and operating expense average for 1981 compares with the previously reported nationwide average of 44.6 cents, estimated by Hertz in November.

Major-city expenses normally are higher than the nationwide average and also are above suburban and rural outlays, primarily because of usually-greater sales taxes and insurance premiums.

City rankings of Hertz estimated compact car ownership and operating costs

For vehicles purchased new and driven 10,000 miles-per-year for four years

1981 Rank	CITY	Cents Per Mile	1980 Rank	1980 Cents Per Mile	1979 Rank	1979 Cents Per Mile	Percentage Changes 1981-80	1981-79

Registrations not available for Oklahoma, delayed for Hawaii.

Pinning down a new Granada

Thomas Atlee, of Dallas, won a 1982 Ford Granada GL in a drawing as part of a National Sweepstakes sponsored by Ford Division. Titled "Pin-Point Leasing," the direct-mail program was aimed at prospective vehicle leasing customers. Presenting keys to Atlee (in the car) and Mrs. Atlee is William R. McCreedy, second from right, Ford Division dealer leasing manager. Others are Marvin J. Ellsworth, far left, Ford Dallas district sales manager; Ronald Rothberg, second from left, general manager of Miracle Ford in Dallas, and Philip R. Martin, far right, Dallas district dealer leasing and rental manager.

But November market share tops year ago

Import registrations dip for month

By Jenny L. King
Staff Writer

Registrations of new imported cars dropped in November 1981, compared with the same month a year earlier, but their piece of the shrinking U. S. pie increased to 27.57 percent from 25.61 percent in 1980, according to figures compiled by R. L. Polk & Co.

November import registrations totaled 169,227, down 9.44 percent from 186,869 for the month in 1980. They were down 7.23 percent from the 182,410 recorded in October, 1981. Import penetration in October was 27.88 percent.

Greatest import penetration for the year through November was 30.58 percent in May.

Import registrations for the first 11 months of the year were 2,247,398, down 1.49 percent from 2,281,435 the preceding year. Imports accounted for 28.70 percent of all U. S. new-car registrations for the 11-month period, up from 28.34 percent in 1980.

Toyota regained its place as top import in November, after losing that spot to Datsun in October. Toyota cornered 20.75 percent of the import share, up slightly from 20.69 percent a year earlier. Datsun also was up, to 19.85 percent from 19.24 percent.

Honda was off 1.69 percentage points, to 13.77 percent from 15.40 percent. VW slipped to 9.90 percent from 10.86 percent, and fifth-place Mazda was off slightly, to 7.56 percent from 8.12 percent.

Subaru, Volvo, Mercedes-Benz and Audi increased their presence among the top-10 importers, while Colt joined the list and Fiesta dropped from it.

The top 10 imports accounted for 88.50 percent of the market in November, down from 89.60 for the month a year earlier.

Japanese nameplates captured 74.80 percent of the import market, up from 73.22 percent the preceding year. The Japanese share of the total November market was 20.62 percent, up from 18.75 percent in 1980.

Registrations by country of origin in November were:

	Nov., 1981	Nov., 1980
Japan	126,578	136,818
W. Germany	29,393	36,782
Sweden	5,968	6,118
France	3,929	2,687
Italy	1,882	2,587
Great Britain	924	1,877
Ireland	553	——

Registrations by country of origin for the first 11 months of 1981 were:

	11 Mos., 1981	11 Mos., 1980
Japan	1,689,822	1,690,315
W. Germany	391,020	426,693
Sweden	71,815	61,908
France	41,497	32,696
Italy	34,446	39,873
Great Britain	17,010	29,942
Ireland	1,788	——
Other	——	8

Registrations of imported trucks in November totaled 36,392, down 5.59 percent from 38,548 a year earlier. Numbers of imported trucks during the month were as follows:

	Nov., 1981	Nov., 1980
Toyota	9,936	7,703
Datsun	8,961	7,574
Ford Courier	5,023	5,285
Volkswagen	3,445	——
Chevrolet LUV	——	8,677
Others	9,027	9,309

The truck import total for the first 11 months of 1981 was 448,502, down 8.42 percent from 489,736 in 1980. Registrations were:

	11 Mos., 1981	11 Mos., 1980
Toyota	119,614	125,359
Datsun	103,265	101,322
Chevrolet LUV	60,062	80,996
Ford Courier	58,690	69,489
Others	106,871	112,570

Stockholders OK merger of Sealed Power, Kent-Moore

MUSKEGON, Mich. — Stockholders of Sealed Power Corp. and Kent-Moore Corp. have approved the merger of Kent-Moore into a wholly owned subsidiary of Sealed Power.

The merger was the final step in Sealed Power's acquisition of Kent-Moore for cash and stock valued at approximately $72 million.

In late 1981, Sealed Power acquired 720,803 shares, or 38.6 percent, of Kent-Moore's common stock through a cash offer of $38 per share.

In the merger approved at the stockholder meetings, each share of Kent-Moore common stock not owned by Sealed Power was converted into 1.22 shares of Sealed Power common stock. This resulted in an exchange of 1,398,891 shares of Sealed Power for the remaining 1,146,632 shares of Kent-Moore.

Sealed Power is a manufacturer and distributor of parts and components to the worldwide automotive original equipment and replacement markets. It had sales of $257.9 million and net income of $11.8 million in the year ended Dec. 31, 1980.

Kent-Moore, headquartered in Warren, Mich., manufactures and markets specialized service tools, equipment and diagnostic instrumentation for the transportation and other industries. It also manufactures special purpose equipment, heavy stampings and weldments, fasteners, open die forgings and press plates for various applications.

Sales for its fiscal year ended March 31, 1981, were $77.7 million and net income totaled $5.3 million.

Renault tries four-wheel-drive—successfully

An experimental Renault 20 sedan, complete with turbocharged engine and four-wheel-drive, won the 6,000 miles-plus Paris-Dakar Rally. World attention, however, was focused on the temporarily lost son of British Prime Minister Margaret Thatcher, later found safe.

Testa appointed

TRUMBULL, Conn. — Donald J. Testa has been named vice president of sales for the Aftermarket Division of Raybestos-Manhattan, Inc.

Speedometer-odometer rules on the way out; petitions due

WASHINGTON. — Within a month, the federal safety standard covering speedometers and odometers will be revoked, and petitions for reconsideration must be filed 30 days after the revocation.

In line with a promise made last October, NHTSA head Raymond A. Peck ruled Standard 127 has no significant relationship to safety.

One concern raised by General Motors and Renault is that states might set their own, differing, requirements.

In this instance, NHTSA said it intends to preempt state and local action on the theory that such regulation would not be appropriate and would undermine the congressional goal of uniform safety standards.

Peck also said local regulation might hamper voluntary features offered by some makers. NHTSA plans to monitor these efforts.

The speedometer requirements involved highlighting 55 MPH, listing a maximum speed capability and using both miles and kilometers.

Companies which used 85 MPH for their maximum are American Motors, Chrysler Corp., Ford Motor Co., General Motors, Mack, Renault, Subaru, Volvo and White Truck.

Honda said it will show the maximum capability of its vehicles. Many makers — including Ford, GM and Honda, will continue to highlight 55 MPH.

The odometer requirements were intended to limit tampering on the theory that buyers who knew the correct age of a vehicle might be better informed of its safety.

Vehicle makers unanimously supported the revocation. Wisconsin and the Center for Automotive Safety supported the standard in filings.

NHTSA said that while the odometer reading may influence preventive maintenance schedules, other factors may be more important to safety.

Revoking the odometer standard should result in a small consumer savings — $12 million a year — because cheaper units will be used by all makers, although some will provide anti-tampering equipment, Peck said.

The champ chooses Saab

Former world motor racing champion Alan Jones, of Australia, has signed a three-year promotional deal with Saab-Scania Australia Pty. Here he receives the keys to his new five-door Turbo from Stan Hansson, left, general manager of the importing division in Australia.

New format draws criticism

GM planning to split shareholder meeting

Continued from Page 6

to attend 52 forums in 41 U. S. and two Canadian cities. Some 32,000 shareholders and guests have attended.

"That's more than have attended the last 18 annual meetings," McNulty said.

"At the forums, every shareholder gets his questions answered, unlike the annual meetings," he said. "Those who don't have their questions answered at the forum itself are answered in a personal letter."

McNulty called the shareholder forums "one of the most innovative ideas in corporate stockholder relations."

He said that 82.5 percent of the forum attendees who filled out evaluation forms after the forums rated them as "good or very good."

He acknowledged that there might be some traditional annual meeting attendees who will dislike the new arrangement but said he believes stockholders who genuinely want information will find the shareholder forum arrangement beneficial.

"Annual meetings today are turning into a travesty," McNulty said.

• Ralph Nader said the change "reflects on the character" of GM Chairman Roger B. Smith and President F. James McDonald "that they can't take facing shareholder questions for a couple of hours a year."

Nader said he believes the protests at the 1981 annual meeting over the razing of parts of Poletown in Hamtramck, Mich., to build a new GM plant was the final factor which influenced the decision.

He said GM can tolerate traditional shareholder advocates like Gilbert and even a "Campaign GM once in a while" but that since community groups have learned the only way "to question corporate monarchs" is to buy stock and attend annual meetings, GM has decided to change the rules.

It was Campaign GM, in which Nader was actively involved, which tried to "reform" GM in the early 1970s. The 1971 annual meeting, which Nader attended, was the longest in recent GM corporate history. It lasted six hours and 55 minutes and was attended by 1,851 shareholders.

Last year's meeting lasted four hours and 46 minutes and was attended by 913 shareholders.

Nader said he believes the GM move will force corporate critics into more proxy action and Securities and Exchange Commission procedural work as well as breed more conflict between GM and its shareholders and further isolate Smith and McDonald from the shareholders.

Other shareholder forums scheduled for 1982 include Oklahoma City on April 8; Chicago, April 13; Cincinnati, April 23; Cleveland, May 4, and Boston, May 12.

McNulty said GM will poll the Detroit meeting and forum attendees to see if they like the new arrangement.

GM engine-switch case appears to be over, but . . .

The General Motors engine switch case in Chicago appears to be completed with GM the winner. But, in that case, appearances can be—and usually are—deceiving.

Federal Judge Frank McGarr has set aside a jury verdict that awarded $5.8 million to buyers of 1977 Oldsmobiles with engines made by Chevrolet.

The set-aside ruling was expected because earlier a GM appeal was upheld and another class action suit was dismissed.

Courts have been narrowing sharply and making very rigid the definition of what constitutes a warranty.

The engine switch case was brought under the Magnuson-Moss Warranty Act. Lawyers for the car buyers claimed that, by switching engines, GM breached warranties. Those warranties were included in ads, posters, sales brochures, commercials, salesmen's pitches and so forth.

The courts have ruled that only the document, the written warranty, counts.

In his latest ruling, Judge McGarr followed that route.

Earlier, he had divided the litigants into two groups, those who bought cars before April 10, 1977 — some 10,688 — and those who bought them after April 10—some 39,000.

Members of the larger, post-April 10 group, got nothing as a result of engine switching except what GM provided under a broad customer satisfaction program it instituted early on in the Chevymobile furor.

The smaller, pre-April 10 group, was awarded $5.8 million, or $550 each.

In the latest action, Judge McGarr set aside the $5.8 million award.

A new sweater for Fraser; a recruit for UAW?

DEARBORN. — Ford Chairman Philip Caldwell presented UAW President Douglas A. Fraser with an Australian wool red sweater complete with a blue Ford logo during the signing of the new Ford/UAW agreement.

The gift stemmed from Fraser's wearing a red sweater to the first day of bargaining which caused a Ford bargainer to quip, "that's the color of our balance sheet." The new contract will save Ford about $1 billion over its 31-month-life.

Caldwell also warned Fraser that his (Fraser's) job might be in danger. Caldwell said his daughter, Desiree Armitage, is studying at Harvard Business School and was named the union leader when her human resources class divided up to negotiate a contract. To that Fraser replied, "that only proves she is smarter than her father."

She got more money out of the company than any other team, Caldwell told Fraser.

Dealers pitch in to help ignite car-truck sales

Continued from Page 2

arron sales were up 53.8 percent over the Jan. 11-31 pre-rebate period.

Cadillac said days' supply of both lines also dropped sharply. Seville dropped from 67 days on Jan. 31 to 32 days on Feb. 20. Cimarron was down from 159 days to 93 days on Feb. 20.

Meanwhile, San Francisco serves as a scenic backdrop for specially created Cadillac displays of the Cimarron in brushed aluminum form.

St. Claire Motor Co., Santa Clara, Calif., was the first dealership to receive the new "Cimarron is California" salon backdrop floor display for in-dealership promotion.

The promotional showroom displays were created by Rivercity Group of Sacramento for San Francisco zone and other California area dealers.

A 100-page magazine on how to start and run more than 20 small businesses is being distributed free at more than 1,100 Datsun dealers nationally as part of a special truck promotion.

The publication, "Financial Independence — The Datsun Guide to Bootstrap Businesses," was compiled and published by Mother Earth News in cooperation with Nissan U.S.A.

Along with how-to articles and advice on finance, there are Datsun pickup truck ads, geared to the businesses outlined in the magazine.

The guides will also be available at 12 entrepreneur shows in major cities during 1982.

In Canada, in a demonstration of its appreciation of once-sizeable ad budgets by the auto dealerships, a Montreal radio station, CFQR, has started airing "public service" messages, asking listeners to "take a look at the good car buys available these days."

*—AMC does not have a nameplate breakout for 10-day periods.

He rips Japanese, lauds Ford-UAW pact

'Best of times' are on the way, Lewis tells SAE

By Al Fleming
Industry Editor

DETROIT.—Nearly 125 years ago, Charles Dickens turned the phrase, "It was the best of times, it was the worst of times."

He never drove a car. Or even saw one. He died in 1870.

Eleven days ago, Drew Lewis borrowed the literary genius's words to describe the current state of the U. S. automobile industry.

These are the worst of times, the U. S. Secretary of Transportation told a gathering at the SAE annual meeting in Detroit, because of the "energy impact, inflation and excessive government regulation."

But the best of times are on the way, he asserted, "because under President Reagan we are experiencing a remarkable period of history—a time of government redirection and economic change."

The words of Lewis, a la Dickens, were welcomed by several thousand auto company and auto supplier engineers collected at Cobo Hall to hear the talk by Lewis at the 1982 SAE International Congress & Exposition, a trade show featuring engineering exhibits and seminars.

The dinner crowd applauded Lewis often during his address, particularly when he came down hard on Japanese auto makers, some of whose representatives stirred uneasily in the audience.

"This is the year we expect to reach some accommodation with the Japanese on the issue of trade between our two countries," Lewis declared.

"Reciprocity, which we're hearing a lot about these days, isn't simply a matter of opening the Japanese market to U. S.-built cars," Lewis said. "We may sell a few more cars there, but that's not really the issue.

• "What Commerce Secretary (Malcolm) Baldrige and U. S. Trade Representative Bill Brock have been seeking in their discussions with the Japanese is a new and revitalized trade relationship based on equity — free trade that is also fair trade," he emphasized.

The applause was loud enough to prompt a pause in the Transportation Department official's speech.

But Lewis was only warming up. He alluded to a talk given in Tokyo by Ford Chairman Philip Caldwell, who observed that "everything that goes up a one-way street eventually comes to a dead end."

Said Lewis: "Japan is probably the most restrictive of all our trading partners. While we've allowed them relatively free access to what we might call our 'middle technology' markets—21 percent of our auto market, 65 percent of the U. S. motorcycle market, 46 percent of the radios sold here and 100 percent of the video tape recorder business—Japan is virtually closed to U. S. products in high and low technology areas.

"We're prevented from marketing our computer technology there, and American beef and citrus products, as well as cigarets, are practically forbidden in Japan."

A number of the Japanese seated at the tables around the speaker's podium squirmed, although their faces were expressionless.

• Lewis said that last December, while in Japan, he cautioned the Japanese Minister of Transport that the growing perception of Japan as unfair in its trading practices could lead to protectionist legislation in the U. S. Congress and in other Western countries. A number of such bills have been introduced in Congress.

"We don't believe that's the best way to go," Lewis said, "because it could lead to the dead end Mr. Caldwell was talking about."

Lewis related that his experiences in Japan lead him to believe the Japanese recognize the importance of maintaining good trade relations.

"Without free trade, their industry can't survive, for they would have no markets," he reasoned.

He said Japanese auto makers should consider increasing their investments in the U. S. market: "If they want to sell here, they should buy more American-built parts, extend their investment in U. S. production facilities and provide more jobs for auto workers in this country."

There was a lot of clapping and a long pause by Lewis, who went on to praise the Japanese after almost burying them.

He praised Nissan, Japan's second-biggest auto maker, for investing $500 million in a Smyrna (Tenn.) plant that will employ some 2,600 workers. He lauded Honda for buying eight new $2 million stamping machines for its Marysville (O.) plant from an American firm.

But Lewis demanded: "We want to see further purchases of U. S. parts and equipment by Japanese auto makers who do business in the American market.

"Unless they follow through on this trend, their present actions will be perceived as more cosmetic than substantive."

Lewis acknowledged the further applause of his listeners, and turned to other topics, such as auto company and UAW bargaining.

He said the Administration feels the government ought to stay out of the labor-management collective bargaining process, that "there are limits to what the government can do, there are actions the industry must take on its own behalf."

He called the agreement reached by Ford and the UAW "nothing short of a landmark event in the history of labor-management negotiations in the auto industry."

He predicted the Ford-UAW contract will enable the auto company to compete against the Japanese cost advantage, and suggested it will give General Motors and the auto workers an opportunity to pursue an agreement.

• As for the Reagan Administration's view of the U. S. auto industry, Lewis emphasized, "We're cutting back on regulations."

He pointed out the rescinding of a rule last fall that would have required passive restraints in all new cars sold in the U. S., starting this year.

He said the federal government will soon launch a nationwide campaign to get more people to use seat belts that are in cars today, and that President Reagan will shortly announce the establishment of a commission on drunk driving, aimed at generating public support for state and local drunk driving programs.

Lewis revealed that the Administration is exploring the possibility of alternatives to the current five-mile-per-hour bumper standard, and that a new rule-making procedure will be announced in March.

He estimated that Reagan regulatory reform is saving the auto industry at least $1.5 billion and consumers another $9 billion.

He promised that "as the President's program succeeds, a stronger U. S. auto industry will emerge."

The audience of U. S. automotive engineers applauded happily. Lewis beamed. The Japanese in the crowd showed no outward emotion.

A director of engineering at Ford Motor Co. muttered, "These better be the worst of times, or we're in trouble."

Dodge council officer

Paul G. Beltz, right, owner, Shadeland Dodge, Inc., Indianapolis, has been elected vice chairman, National Dodge Dealer Advisory Council, which represents more than 1,700 Dodge dealers nationwide. He receives a plaque citing his service as council secretary from John B. Naughton Sr., Chrysler Corp. executive vice president—sales and marketing.

Comfort standard for seat belts delayed until '84

WASHINGTON. — The comfort and convenience standard for seat belts—one of the last actions taken by Joan Claybrook as NHTSA chief — has been postopned by her successor, Raymond A. Peck.

The standard will now become effective for '84 models, instead of for 1983s.

The standard was originally set in the expectation that passive restraints would have started to phase in during 1983.

It covered both manual and automatic belts in vehicles weighing less than 10,000 pounds. But it excluded manual belts that were a combination of lap and shoulder belts because it was assumed they would be passive belts.

Peck noted his rescission of the passive restraint standard has changed the situation. A postponement is needed to respond to companies which petitioned for changes or revocation of the standard, he said. The requirements may change substantially for 1984, he said.

Use of seat belts is one of Peck's prime projects. Peck said he is considering changes to encourage their use and to maximize possible technical improvements.

Maryland dealers to meet in Ireland

BALTIMORE.—The Automobile Trade Assn. of Maryland is sponsoring a "spring seminar" for dealers—an offshore meeting in Ireland April 17-24.

Meetings in Ireland will be held in Dublin and Limerick.

Phoenix elects Blewett

PHOENIX. — Ken Blewett, president of Pioneer Ford, has been elected president of the Greater Phoenix New Car Dealers Assn. Other officers include Jim Blue, Childress Buick, vice-president, and Ray Tanner Jr., Ray Tanner Volvo, secretary-treasurer.

Month's car production totals 325,243

February output lowest since 1948

Continued from Page 1

companies is: GM, 315,000, down 17.29 percent from 380,866 last year; Ford, 106,000, down 18.51 percent from 130,070; Chrysler, 60,000, down 30.65 percent from 86,512; VWoA, 9,273, down 49.47 percent from 18,350, and AMC, 5,000, a drop of 47.99 percent from 9,613.

• For the first quarter, the makers expect to build 1,101,055 cars, down 29.87 percent from 1,569,978 in the first three months of 1981.

Last week, the makers targeted 82,533 units, down 8.81 percent from 90,509 the previous week and down 38.69 percent from 134,625 in the comparable 1981 week.

Breakdown for the week by company is: GM, 67.82 percent; Ford, 19.22 percent; Chrysler, 12.84 percent, and Checker, 0.12 percent.

AMC's Kenosha facility was idle last week to adjust inventory. The plant is scheduled to return today (March 8).

Also idle last week for inventory control were two GM and three Ford facilities. They were: GM Flint and Leeds and Ford Atlanta, Dearborn and Kansas City.

The GM Arlington and Baltimore points were idle for the second week of downtime last week.

Also still down at GM were Framingham, South Gate and Tarrytown. The GM Janesville and Oklahoma facilities remained down for model changeover.

VWoA's Westmoreland plant returns today after a two-week shutdown due to poor sales of the Rabbit. The point will be idle again the week of March 22.

Checker Motors' Kalamazoo facility will be down starting today for one week.

Year-to-date, the makers have built 684,389 cars, down 36.51 percent from 1,077,944 in the comparable 1981 period.

25 Chevy years

R. Wilton Holley, right, owner, Holley Chevrolet Co., Brownwood, Tex., receives Chevrolet's 25-year dealer award plaque from Edward R. Brennan, Dallas zone manager.

February truck production lowest recorded since 1963

Domestic truck production in February was the lowest for that month in 19 years but the makers are looking at March in a much more favorable light.

Last month, the truck manufacturers finished 128,013 units, down 3.69 percent from 132,921 completed in February of last year, and the lowest total for that month since 1963 when only 117,652 trucks were built.

For March, the truck makers are projecting 187,395 units, a 19 percent gain from 157,444 completed in the comparable 1981 month.

The forecast for the first three months of 1982 is 431,109 trucks, down 2.26 percent from 441,074 in the first quarter of 1981.

(Since AM General and miscellaneous figures are no longer reported to AUTOMOTIVE NEWS, these figures, which are estimated, are not included into any forecast and have been subtracted from last year's comparable totals.)

Truck production last week was estimated at 39,477, down 8.46 percent from 43,124 the previous week, but up 11.88 percent from 35,285 the comparable 1981 week.

So far this year, the makers have finished 311,593 trucks, a slight gain from 311,042 in the comparable 1981 period.

Production of light-duty utility trucks was cut last week (March 1) from two shifts to one shift at General Motors' Pontiac facility. About 1,050 workers were placed on indefinite layoff.

Saturday overtime was scheduled last week at GM's St. Louis (GMC Truck & Coach) plant.

American Motors' Toledo (Jeep) plant was idle last week to adjust inventory.

Volkswagen of America's Westmoreland point resumed operations today (March 8) after a two week shutdown due to slow sales. The facility will be idle again for one week, starting March 22.

International Harvester's Ft. Wayne point returned last week after being idle two weeks to control inventories.

1982 diesel models recalled by GM for engine fix

DETROIT. — General Motors announced it will recall about 80,000 1982 cars equipped with the 5.7-liter V-8 diesel for a fix involving the engine governors.

GM said it discovered in testing that one high-mileage production car had a rivet separate in the governor weight retainer assembly. GM said this separation can cause the throttle to stick, resulting in loss of control over engine speed.

GM said it has one report of this happening in a customer's car, No accident or injury resulted, the company said.

Dealers will replace the governor weight retainer assembly on the affected cars.

Month's car build slips in Canada, but year leads '81

Although the Canadian auto makers wound up February with production just a fraction below that of the comparable 1981 period, the total was the lowest for that month in 14 years.

Output last month was 64,022 cars, down slightly from 64,220 in February of last year, and the lowest since 1968 when the auto makers built only 47,317.

The truck manufacturers assembled 35,476 units in February, down 20.78 percent from 44,765 in the comparable 1981 month and the lowest since 1975 when output was 31,140.

Downtime at all Ford car facilities, plus one-shift operations at General Motors' Ste. Therese point cut last week's estimated auto production to 17,957 units, down 3.79 percent from 18,665 the previous week. However, the total was 8.74 percent above 16,513 in the comparable 1981 period.

So far this year, the auto manufacturers have completed 129,316 units, up 12.47 percent from 114,975 in the same period last year.

Truck production last week was targeted at 11,363 units, down slightly from 11,435 the previous week and down 2.67 percent from 11,675 in the comparable week last year.

Year-to-date, the truck makers have finished 75,901 units, a drop of 24.38 percent from 100,370 in the same 1981 period.

Ford's Oakville and St. Thomas facilities were idle last week (March 1) for inventory control. Both points are scheduled to return today (March 8).

Also down for inventory adjustment was one shift at GM's Ste. Therese facility.

GM's Oshawa (No. One) point will be idle one week starting today.

All truck facilities were reported working last week.

Geneva genesis

Mitsubishi basher

Mitsubishi 2+2 Starion was introduced at the Geneva Motor Show. It features a turbo gasoline engine and an antiskid braking system. The Starion will be sold first in Europe, later in Japan and the U. S. Story on Page 2.

'S' stands for Sporty

Sprightly Opel open-air show car, based on General Motors' S-car to be built in Spain, is named Corsa. It was unveiled at the Geneva Motor Show. Covering over passenger seat rolls sideways into the door, like a desk top.

Production cutbacks trim new-car supply to 70 days

By Richard A. Wright
Assistant Managing Editor

U. S. auto makers reined in their runaway inventories during February and opened March with a very respectable 70-day supply of new cars.

But there wasn't much cheering in Detroit.

While inventories may be back in line, the reduction from the month-ago 97-day supply — and the record 107-day stockpile Jan. 1—was achieved mainly through production cutbacks.

The domestic new-car inventory totaled 1,325,073 on March 1, down more than 100,000 units from 1,431,983 a month earlier, and below the 1,334,919-unit total on March 1 a year ago, which was a 59-day stock.

Interestingly, the market segments in which there has been the most new-model introduction activity in recent months—subcompacts and intermediate—continued to be the heaviest in inventory supply.

All corporate makers trimmed their days-supply figures during February and all but Volkswagen of America cut their unit counts, reflecting not only production cutbacks but also an upswing in the sales pace compared with January.

• General Motors slashed its inventory sharply during February and opened March with a 71-day supply, down from 98 days a month earlier. GM's recently introduced A-body cars continued in heavy supply, while stocks of its compact X-bodies were dwindling.

Ford Motor Co. continued its heavy inventory chopping and opened March with a 59-day supply, down from 87 days a month earlier and 113 days two months earlier. Strong sales continued to whittle Escort and Lynx stocks.

Chrysler Corp. had a 76-day supply of new cars March 1, down from 104 days a month earlier. Shortages have not been a problem at Chrysler for a long time, but the corporation has managed to bring most of its more burdensome nameplate stocks into line.

VWoA was the only maker to increase its unit count during February, but a stronger sales pace resulted in a decline in days supply from 165 a month earlier to 138½ on March 1.

Table on Page 50

American Motors opened March with an 88-day supply down from a 112-day stock a month earlier.

The March 1 domestic inventory was divided this way: GM, 61.36 percent; Ford Motor Co., 20.51 percent; Chrysler Corp., 13.24 percent; VWoA, 2.90 percent, and AMC, 1.99 percent.

A month earlier, the domestic inventory was divided as follows: GM, 61.20 percent; Ford Motor Co., 21.44 percent; Chrysler Corp., 12.98 percent; VWoA, 2.45 percent, and AMC, 1.93 percent.

• By size class, the industry trimmed its supply of subcompacts from 120 days to 74 and its stock of intermediates from 127 to 84, but those segments

Job-security advances altering labor relations

By Marjorie Sorge
Labor Editor

The wave of early contract talks currently flooding the automotive industry will carve a path for the ultimate job security and more interaction between company and union.

Some union officials see vast changes coming in the next decade, changes that will alter the way the U. S. automotive world is run.

While the new pacts are opening up closer communications between the auto companies and the workers, there are also other trends developing. These include:

1. Industry-wide seniority stemming from company-wide seniority. This would allow workers to transfer to any automotive plant, including suppliers, as long as it was UAW-represented. Company-wide seniority must be established first.

2. One workforce with little if any differentiation between white-collar and blue-collar employes.

3. A more mobile workforce requiring increased moving allowances to keep up with the relocation rates.

4. A world-wide umbrella union representing all parts of the automotive sector throughout the world.

Some union officials say these changes are possible within the next decade.

But the speed at which they develop will depend on how well the workers accept the new agreements — the new one at Ford Motor Co. and those which could be negotiated at American Motors and General Motors.

The key to the new era of labor relations is union-management and employe-employer communications. In the new Ford agreement and in previous Ford, AMC and GM contracts, moves have been made to give the workers more input into the everyday decisions of the companies.

• The trend began to pick up steam with UAW President Douglas A. Fraser's election to the Chrysler Corp. board of directors two years ago. Fraser said recently that his seat allowed him to hold up the sale of Chrysler Defense, Inc., until he was certain the workers were well protected.

The practice of more union participation in company mat-

breaking news

GM sued for Cadillac V-8-6-4 engines

DETROIT. — Lawsuits have been filed against General Motors in Cleveland and Ft. Worth by owners of Cadillacs equipped with V-8-6-4 engines. The Cleveland suit seeks $10 million in punitive damages for an estimated 5,000 Ohio owners of the cars, which are said to stall, surge, knock and lag in power. The Ft. Worth suit charges breach of warranty.

Mitsubishi buys site near Los Angeles

FOUNTAIN VALLEY, CALIF.—Mitsubishi Motor Sales of America has purchased a 22.3-acre site in Cypress, a suburb of Los Angeles. The company will eventually locate its corporate headquarters, national parts distribution center, service training center and Western regional headquarters at the site.

Import market declines in Japan

TOKYO.—Sales of imported car sin Japan numbered 1,893 in January, down sharply from the 2,336 counted a year earlier. Leading makes were: Volkswagen, 661; Mercedes-Benz, 318; BMW, 208; Audi, 170; Ford, 111, and Buick, 64.

Real estate magnates mapping out dealer network

National used-car chain in works

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — A new company called Triexcellence, Inc., is seeking to establish a national used-car dealer network, franchising new-car dealers to sell both their own and consumers' cars under the Triex banner.

The principals behind Triex, Art Bartlett, who is chairman, and Jim Cummings, president, say they will use the same techniques they employed in building the Century 21 real estate chain.

Bartlett is still chairman of that company, while Cummings formerly served as its president and chief executive officer.

According to Cummings, Triex hopes to have 3,000 to 5,000 dealers in the network by 1987. Their goal is to eventually account for 5 percent of total used-car sales nationally.

Cummings said the primary objective behind the Triex program is to build a trade name that is synonymous with quality used cars when the consumer is either looking to buy or sell a vehicle.

To that end, the company will be committing large amounts of money to national print and television advertising campaigns. In fact, the largest ongoing expense by a dealer participating in a Triex franchise will be advertising.

The buy-in price of a Triex franchise will be $10,000 for the trade name, plus $80 per month. The dealer will also be required to contribute $2,000 per month toward an advertising fund.

Triex will also contribute 10 percent of $80 per month of each dealer's monthly fee to that pool, and those revenues will be used for both national and local ad campaigns.

Cummings said the operation will provide a franchise for the

Plant closings prompt reversal of union stance

UAW and GM return to bargaining table

By Marjorie Sorge
Labor Editor

DEARBORN.—The UAW General Motors Council voted overwhelmingly Thursday to resume negotiations with GM.

With 15 dissenting votes the 314-member council voted to return to the table immediately. GM and the UAW met Friday, at the company's request. At that time, GM made a presentation to the union.

UAW President Douglas A. Fraser said he expects intensive negotiations to begin today (March 15).

He said the council acted because of the numerous plant closings at GM and because of the new Ford Motor Co. contract. Talks with GM broke off Jan. 28 without an agreement.

When asked if the union had lost some of its strategic edge in the six-week hiatus, Fraser said, "The longer you wait, the weaker you get and the stronger GM gets," indicating the union is in a slightly weaker position today than it was in January.

Owen Bieber, UAW vice president and director of the GM department, said plant closings will be a major topic at the negotiations.

Fraser said, "Maybe one of our first demands should be that someone should put a zipper on Roger Smith's lips."

Smith, GM chairman, in the past indicated that a lack of an agreement would mean more plant closings and layoffs.

The UAW International Executive Board will meet the week of March 22. If no agreement has been reached with GM by that time, the union will recess talks until the meeting is over.

Fraser has said the union wants to discuss the new Ford contract as a model for any new GM package and is still interested in arranging a "pass-through" agreement that could lower car and truck prices penny for penny on any cost savings generated by UAW concessions in a new contract.

Both Roger B. Smith, GM chairman, and F. James McDonald, GM president, have said GM will not pass along savings to the consumer in the next round of talks.

Besides a pass-through agreement, the original framework agreed to by GM and the UAW before talks broke off Jan. 28 allowed an independent CPA to see GM's books and provided job security and equality of sacrifice.

At the start of negotiations, both sides agreed to withdraw their proposals if a settlement could not be reached, but Alfred S. Warren, GM labor relations vice president, said then he didn't see GM disregarding that framework entirely although he said it might be altered as time passed.

Art Davis, auto anaylst for Prescott, Ball & Turben, said the union will not press for the pass-through because Ford would have to follow suit and the "UAW does not want to hammer Ford right now." He thinks GM will cut the prices with the fall introduction.

Fraser said a pass-through plan is not necessary for ratification of a new pact and indicated the union would take into consideration the freeze-up of sales which occurred the last time the plan was announced.

He also warned that an agreement with GM will not be possible if GM takes a hard-line attitude during bargaining.

"I hope GM does not expect us to make more concessions than Ford," he said. "That's totally unrealistic especially when you consider Ford's big losses."

• The Ford contract costs each worker about $2 an hour. Ford lost just over $1 billion in 1981 while GM made $333.4 million.

Davis said he expects GM to come to the table with a new set of demands which would ask for labor cost cuts totaling $6 or $7 an hour.

"I think you've got a barn burner coming," he said.

While the Ford agreement will be a model, according to Fraser, union officials say the language in any GM contract must be tougher than in the Ford pact. Much of the language in the Ford contract is loosely worded and is based on the trust of both parties.

The Ford agreement expires Sept. 14, 1984, and provides a guaranteed income program for high-seniority workers, a 24-month moratorium on plant closings, improved SUB benefits, profit sharing and forms of job security.

In exchange, the UAW granted a wage freeze for the length of the contract, a nine-month freeze on COLA increases and the elimination of all paid personal holidays (PPH).

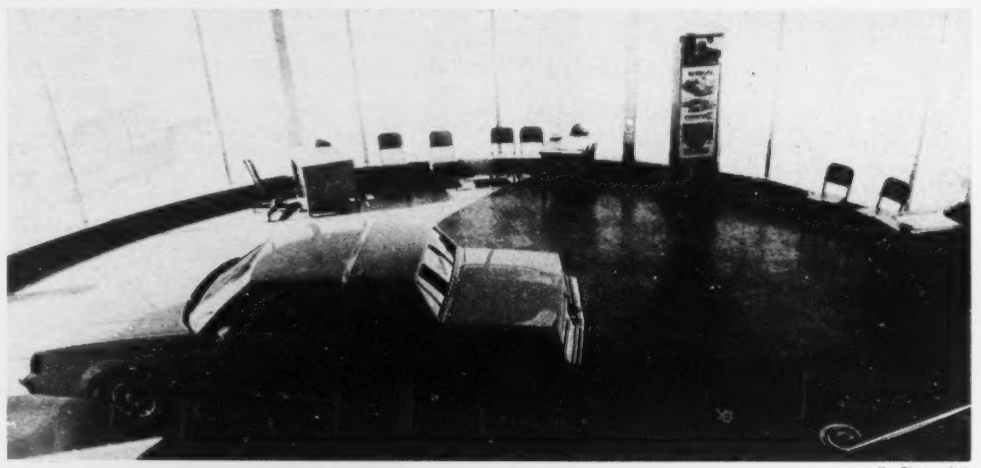
In the last round of GM-UAW talks, the union wanted a moratorium on outsourcing and demanded that all operations moved overseas within the past year be returned to the U. S. Its economic plan dropped labor costs by about $3.50 an hour.

GM's first proposals called for a $5 an hour cut in labor costs.

The contract would have run through September, 1983.

Meanwhile, at presstime, the UAW's talks with American Motors had recessed while one local readied its proposal to the company. Under the AMC agreement, there are certain parts of the contract tailored to each local.

The UAW and AMC are negotiating a $150 million investment plan which requires workers to invest with AMC 10 percent of their raises over about 22 months. It also calls for cuts in paid time off.



Jim Piegue photos

. . . And then there was one

The showroom floor of P. L. Grissom & Son Buick, Dearborn, a dealership which once moved as many as 1,000 cars a year, is almost empty now. This lone white '81 Regal demo was sold to a young woman at the end of February. It was replaced on the floor by a white '81 Riviera demo, which could well be the last car Grissom Buick will ever sell. The dealership opened for business over 50 years ago.

No floorplan, little business but much pride for Chuck Grissom

Seeing a lifetime go down the drain

By Edward Lapham
Financial Editor

Chuck Grissom is a tired man. On his desk are a number of prescription drug vials for a variety of ailments, which he said include heart problems.

However, the biggest problem facing Grissom, president of P. L. Grissom & Son Buick, is that for the past year he has had to watch as the business started over 50 years ago by his father has slowly bled to death.

Grissom's father, P. L. Grissom, started as a GM dealer in 1931. He opened the current deal in 1965 with his son, who assumed day-to-day responsibilities after P. L.'s death in 1972.

Chuck Grissom has a number of relatives, uncles and nephews, who also are new-car dealers. Most are GM dealers.

The store, which stands in the shadow of Ford Motor Co. corporate headquarters in Dearborn, is virtually empty now. A workforce that once totaled 54 is now down to just a dozen. One of Grissom's sons was among those laid off.

A lone white '81 Riviera demonstrator sits on the showroom floor waiting to be delivered. It will likely be the last car Grissom sells.

Chuck Grissom's situation is not unique. According to Automotive News records, the number of General Motors, Ford, Chrysler and American Motors dealerships declined by 3,263 from Jan. 1, 1979, through Dec. 31, 1981, the period of the current automotive depression.

Grissom believes that he has much in common with other dealers in a similar situation, but at the same time there seems to be a certain unique element to the situation, almost like an existential novel where the characters are passive participants with no control over their own destinies.

The dealer calls it a "Catch-22" situation: Grissom said he cannot get his GMAC floorplan reinstated, he cannot obtain another line of wholesale credit, he cannot buy cars from the factory which prevents him from operating as a new-car dealer, and he cannot find an acceptable buyer for his dealership.

His only alternative is to "turn the key" and close the dealership forever. That he refuses to do for reasons of pride.

• Like many dealers in general, and urban dealers in particular, Grissom has found the last few years to be particularly difficult. The 1970s phenomenon of sprawling suburban dealerships

Continued on Page 29, Col. 1

Every picture . . .

Chuck Grissom, P. L. Grissom & Son Buick, sits beneath a portrait of himself done in earlier, better days. Behind the dealer, a TRS-80 computer sits idle.

New models groomed by European makers

GENEVA.—If the new products are a bit thin here at Geneva's annual spring auto show, there are plenty round the corner.

Most of them are being saved for Paris in the fall. At least five all-new models will be there to grab the headlines.

Ford and Fiat will replace models that are no spring chickens. Audi, hit by a significant swing away from its bigger 100 and 200 models, will have something to bring back showroom traffic.

At the same time, General Motors' Opel and Peugeot SA's Citroen will make some overdue plugs for gaps in their ranges.

Ford Ford, Paris will be the time of the Sierra, heavily hinted at with Probe 3 shown at Frankfurt. Sierra will replace the mid-size Taunus sedan, a model which only sells well now in the UK (as a Cortina). The competition from GM's J-car, put into production in West Germany and the UK last fall, is being increasingly felt.

Fiat's news will be the Type 1, a model which must be regarded as an eventual successor to the small hatchback 127. The 127 has been tarted up several times—as have a lot of Fiat products—but there is no real disguising its age.

Audi now makes little secret of the fact that its three-box Auto 2000, unveiled at Frankfurt, is very close to the true replacement for its larger models. It is a soft, stylish car.

Opel dealers are desperate to round out their model offering in the Polo/Renault 5/Fiesta category. They will get it with the Spanish-built Corsa, the model hitherto known as the S-car. It, too, will debut at Paris.

Similarly, Citroen needs a model between its medium GSA and larger CX. It will introduce the XB as a result. It will also undoubtedly have the diesel power plant option that has been notable by its absence at the lower end of Citroen's range.

Not at Paris, but certainly unveiled before the end of the year, will be Daimler-Benz's small Mercedes 201.

But before all this, Fiat's Lancia operation will attempt to steal the spotlight at the spring Turin auto show.

There will certainly be a three-box version of the hatchback Delta. Its name is not known, though it has masqueraded under various type numbers.

Market segments with new models suffer

Production cuts reduce inventories to 70 days

Continued from Page 1

were still the heaviest.

The stockpile of compact cars plummeted from 92 days Feb. 1 to 54 days and was the segment lightest in supply March 1.

The industry had a 68-day supply of standards, down from 72½ days a month earlier, and a 63-day supply of luxury cars, off from 77 days.

The March 1 inventory was divided this way by market segments: Subcompact, 28.11 percent; compact, 21.34 percent; intermediate, 32.12 percent; standard, 12.11 percent; and luxury, 6.32 percent.

A month earlier, the inventory was divided as follows: Subcompact, 29.53 percent; compact, 23.47 percent; intermediate, 30.23 percent; standard, 10.73 percent, and luxury, 6.04 percent.

• The March 1 days-supply figures by market segment were:

Subcompact—Lynx, 50½; Escort, 52; Chevette, 52; T1000, 63; Horizon, 67; Omni, 69½; Eagle SX/4, 72; TC3, 81; 024, 82, Spirit, 87; LN7, 90½; Cavalier, 93; EXP, 94; J2000, 114, and Rabbit, 138½.

Compact — Citation, 36; Zephyr, 36; Firebird, 36; Skylark, 43; Phoenix, 46; Fairmont, 50; Omega, 50; Camaro, 59; Reliant, 69; Aries, 77; Mustang, 79; Eagle, 79; Capri, 88, and Concord, 105.

Intermediate — Cougar, 33; Granada, 49; Gran Fury, 55½; New Yorker, 61; Bonneville, 74; Diplomat, 74; Celebrity, 78; Century, 80; LeBaron, 83; Regal four-door, 83; Cutlass four-door, 83½; Cordoba, 86½; Cutlass Supreme two-door, 92; Cutlass Ciera, 92½; Regal two-door, 93; Grand Prix, 97; XR-7, 98; Malibu, 100; Thunderbird, 107; Monte Carlo, 112; Pontiac 6000, 121; Mirada, 124, and Dodge 400, 128½.

Standard — Pontiac, 50; Olds Eighty-Eight, 57; Mercury, 58; Olds Ninety-Eight, 65; LeSabre, 66; Ford, 69; Chevrolet, 79; and Electra, 84.

Luxury—Continental, 35; Seville, 41; Lincoln, 57; Eldorado, 60; Cadillac, 61; Mark VI, 70; Corvette, 82½; Cimarron, 85; Riviera, 86; Toronado, 88, and Imperial, 99.

Deadline changed for rewording of Chrysler paper

WASHINGTON. — Chrysler Financial Corp. has been granted a delay in the deadline for changing its retail installment contracts. The Federal Trade Commission, modifying a February, 1981, order, has given Chrysler until April 1 to revise forms to dealers outlining consumer rights in repossession cases.

Under the original order, Chrysler had to eliminate by Feb. 18 any misleading or erroneous contract explanations about debtors' liability for a deficiency.

Another requirement was to change the contracts to explain debtors' rights to any repossession surplus. Revised forms containing this change were to be distributed for dealers' use within a year after FTC's final decision in a related case.

Chrysler Financial asked that April 1, 1982, be the effective date for both changes.

Ford, GM cut prices charged each other

DETROIT. — Ford Motor Co. and General Motors have asked suppliers to cut prices by 2 percent. As do all the U. S. makers, both firms annually sell each other components valued far into the millions.

Each has cut by 2 percent the prices charged the other. A top-ranking Ford officer told AUTOMOTIVE NEWS, "They buy more from us than we do from them so the trade balance is in our favor."

1976 Ford strike aided SUB plan, Woodcock recalls

ANN ARBOR, Mich.—The 28-day strike against Ford Motor Co. in 1976 paved the way for dramatic increases in high-seniority SUB benefits, according to Leonard Woodcock, former UAW president.

He said the safety factors developed with the SUB fund in the 1950s became less reliable in the 1970s, causing the strike. The 1976 Ford contract gave workers with 10 years' seniority a Guaranteed Benefit Account which backs up the regular SUB fund if it is exhausted.

Ford's new agreement gives workers with 10 years' seniority up to 104 weeks of benefits, up from the previous 52 weeks.

But Woodcock said the new SUB fund is based on a recovery of the auto industry and "at best it cannot be constructed to withstand continuing inflation."

The new Ford agreement was ratified by the rank-and-file in late February by a 73 percent majority.

The unofficial count was 43,683 for and 15,933 against.

IH's executives to repay big loans after all

CHICAGO. — International Harvester Chairman Archie McCardell and President Warren Hayford have agreed to repay portions of some $2 million in loans that the IH board previously had forgiven.

Details of the payback agreement have not been revealed.

The loans were part of compensation packages that each executive negotiated before leaving a high ranking post at Xerox Corp. to join IH.

Forgiveness of the loans was tied to IH's financial performance in comparison with that of its competitors.

In the fiscal year ended Oct. 31, 1979, IH profits more than doubled from those of the previous year, and portions of the loan were forgiven. Then IH fortunes changed and the status of the loans became an emotional issue.

Pfeifer joins staff of General Warranty

MARINA DEL REY, Calif. — Nancy Pfeifer has joined General Warranty Corp. as director of the Agency & Underwriting Department.

Prior to joining General Warranty, she spent five years as the administration manager of American Warranty Corp.

A new look in dash panels

The Ford Ghia Quicksilver show car features this classic instrument panel with round dials set in an asymmetric dash panel. The panel is based on sectors of a circle springing out from the center of the steering wheel. The Quicksilver made its debut at the Geneva Motor Show.

Local-market ad programs tested by Chevy, Cadillac

Continued from Page 2

bigger impact on Cadillac and Chevrolet.

All the auto divisions are looking at new ways of doing business and getting more results for their dollars.

Competitive Edge's Galles thinks local ad support funding will grow at GM because local messages coordinate better with the way dealer groups order cars and the market conditions they have to sell in.

Galles said that, of the GM divisions, Cadillac's current test program comes closest to Buick's.

• Buick's contributions to dealer groups are based on achieving a certain number of gross rating points for a certain number of weeks in a given market.

Thus, Buick determines the cost of achieving a given number of GRPs over a specified period in a market—and provides the funding necessary.

The amount it contributes may vary on a market-by-market basis, but the end result is to give dealers in different areas the same level of impact and frequency.

Competitive Edge handles about 50 Buick dealer groups. They typically spend $30 to $75 per car, depending on their area.

Galles said the groups had enough money to do a good job for about seven to eight months a year. The factory funds help them generate messages of "equal strength" close to a year-around basis.

"The key to the program is developing a message that can be approved by GM legal, and has heavier local impact" than the national message, he said.

Buick's co-op funds are available to any association, Galles added, not just those represented by his agency.

Meanwhile, the TV / radio / newspaper campaign, being run by Eisaman, Johns & Laws, uses the theme, "You're closer to a Cadillac than you think" to convey affordability.

It began recently and runs for different lengths of time in different markets, with a six-month limit.

The Eisaman agency pretested it on its own for nearly 12 months in Southern California before pitching Cadillac officials in Detroit on the concept.

GM and Toyota hold talks aimed at joint project

Continued from Page 2

talked with Ford and with GM and asked: "Are they going to talk with Checker next?"

Another said he had just returned from visiting Toyota's operations in Japan.

"They have a very highly capitalized, highly efficient plant there in Toyota City," he said. "It's probably the most efficient car plant in the world today and I can't see them wanting to move any of its produtcion elsewhere."

There is some sentiment here that the Japanese will bring with them their home country suppliers if they do build car assembly plants here.

Said a supply firm vice president:

"Japanese vehicle makers will strongly encourage suppliers to come to the U. S. One of their concerns has been whether their suppliers would have the resources (money) to follow them.

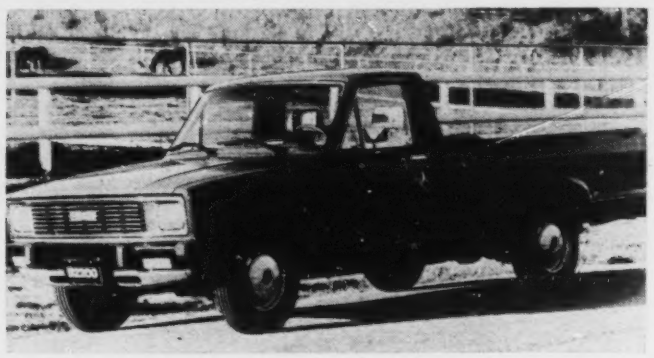
"If they come, they'll start with existing vehicle designs. They'll be reluctant to change too many things at once. As they do bring in new models, they may add new suppliers," he said.

Datsun paying $200-$400 to dealers on 210s

GARDENA, Calif. — To help clear out its 210 models, Datsun is running a March 5 - April 30 dealer incentive on the 210 Deluxe models. These include two-door, four-door, coupe and wagon versions. Excluded are the standard and MPG 210 units.

Sales of the first three qualifying vehicles pay nothing. Thereafter, dealers get $200 for every sale of a two-door or four-door Deluxe model and $400 on every coupe or wagon.

Datsun has about 33,000 of the 210s in stock, about a 73-day supply. It plans to introduce a new Sentra replacement for the 210 in April.



Mazda introduces diesel pickup in U. S.

The B2200 compact pickup, the first Mazda diesel-powered vehicle sold in the U. S., features a 2.2-liter, four-cylinder engine that develops 58 HP at 4,000 RPM. It features a quick-start system that electronically controls the preheating time of the glow plug. The cargo bed is 86 inches long, 57 inches wide and 16 inches deep.

Mazda widens '82 line, hopes to double sales

By Jack Walsh
Truck Editor

PALM SPRINGS, Calif. — With the addition of a diesel model and a restyled and refined line of gasoline compact pickup trucks, importers of the Japanese-built Mazda have announced that their 1982 goal is to double retail sales in the U. S.

In 1981, Mazda dealers retailed nearly 17,000 of the small pickups, an all-time high and an increase of 95.4 percent over the previous year's approximately 8,700 deliveries.

While the compact-pickup segment will be the market's most competitive area this year with more than a dozen imported and domestic entries, Mazda executives are confident they can achieve their objective of more than 34,000 sales in 1982.

"There are a number of reasons for our optimism," said Duane Bowen, marketing manager, Mazda Motors of America (Central), at a press preview of the company's 1982 models here.

"First of all, our 1982 lineup is our broadest ever," he said. "And we think it's the best value on the U. S. pickup market. The standard B2000 Sundowner is not only the lowest-priced pickup truck sold in the U. S., but it also offers more standard equipment than any of the competition."

• Base sticker price of the Sundowner is $5,895, about $250 less than the closest competitor, the company said, while the base B2200 diesel carries a suggested list of $6,745, about $600 under its nearest rival.

The other two gasoline models — the Sundowner Deluxe and Sport — have been restyled inside and out, Bowen continued, and the all-new B2200 diesel — Mazda's first diesel model to be sold in the U. S. — is designed to compete effectively in a growing part of the compact market.

The B2200 is powered by a four-cylinder, 134.8-cubic-inch diesel that generates 58 HP at 4,000 RPM and 88 foot pounds of torque at 2,500 RPM. The engine is based on a Perkins diesel and was introduced in Japan in 1967.

"The B2200's engine has been thoroughly proven in the Japanese market, both in the Bongo series of vans and coaches and the Mazda Luce passenger car," Bowen said.

"A quick-start system that electronically controls glow-plug heating assures startup in a few seconds in almost any climate," he explained. "It was accomplished by directing more current to the glow plug while adding a sophisticated control system to keep the plug from getting too hot."

• To prevent dieseling run-on, he added, the traditional fuel-cutoff solenoid is backed up by an air-intake shutter valve that totally eliminates combustion once the key is turned off.

The B2200 also features an electronic check panel on the dashboard to alert diesel owners to fuel and oil problems.

"The traditional warning lights are backed up with buzzers that are activated automatically when water in the fuel-water separator—called a 'sedimentor' — reaches about half a quart," Bowen said. "Another buzzer warns the driver if the oil filter should become clogged."

He said the B2200 has EPA-estimated fuel-economy ratings of 32 MPG in city driving and 40 MPG on the highway.

The B2000 Sundowner for 1982 features a new, longer

Rugged yet refined

Triangular ventilation windows and restyled, durable seat upholstery are interior features of Mazda's 1982 compact pickups, available with both gasoline and diesel power. The cab is new, with a redesigned instrument panel and new steering wheel.

truck industry news

Light trucks pace advance for second straight month

February Big 3 sales rise 19.6 pct.

Retail sales of new trucks of all types by Big Three dealers were up significantly in February for the second consecutive month, with light trucks providing the impetus.

During the month, 173,293 Big Three trucks were sold, an increase of 18.6 percent over the year-earlier 146,129 units. The two-month total was 321,555, up 16.1 percent over last year's 277,007.

Sales of light trucks in February were 19.6 percent higher than last year, from 138,916 in 1981 to 166,134 units. Through February, the count was 306,619, an increase of 16.8 percent from the year-ago 262,404.

There was little change in sales of Big Three medium and heavy trucks. The February total of 7,159 units was only 54 short of last year's 7,213. The two-month count was up 2.3 percent, from 14,603 units in 1981 to 14,936.

Compact-pickup sales have risen dramatically with the introduction of the domestic entries, but the Japanese vehicles' share of this market has plunged significantly in the first two months of 1982.

• In February, dealers retailed 58,084 of the small pickups, an increase of 34.3 percent over last year's 43,263 units. The two-month count was up 32.7 percent to 101,955, compared with 76,837 a year ago.

The Japanese-built compacts — Toyota, Datsun, Mazda, Isuzu, Ford Courier, Chevrolet LUV, Plymouth Arrow and Dodge Ram 50 — accounted for only 55.8 percent of the February total and 59 percent of the two-month count. A year ago, the February share was 92.9 percent and the two-month share was 93.3 percent.

February sales of the imported compacts totaled 32,393 units, off 19.4 percent from the year-ago 40,179, while the two-month count was down 16.1 percent, from 71,704 in 1981 to 60,155.

Only 11,010 of the captive compacts — Courier, LUV, Arrow and Ram 50 — were sold during the month, down 37.8 percent from last year's 17,686. The two-month total was 22,122, off 30 percent from last year's 31,613.

The non-captives — Toyota, Datsun, Mazda and Isuzu — were down slightly for both February and the two months. During the month, sales totaled 21,383, off 4.9 percent from last year's 22,493. The two-month count was down 5.1 percent, from 40,091 in 1981 to 38,033.

Chevrolet's S-10 has replaced Toyota as the top-selling compact pickup in the U. S. Sales in the first two months of 1982 totaled 29,413 units, 55.5 percent higher than Toyota's 18,908. S-10's February sales hit 17,741, up 70 percent from Toyota's 10,440.

The S-10's impressive reception has widened Chevrolet's lead over Ford in retail sales thus far this year to more than 25,000 units. Through February, Chevrolet had 136,186 sales, compared with 109,846 for Ford.

But Ford's Ranger compact pickup is expected to reduce the Chevrolet margin when availability improves. The Ranger went into production Jan. 18 and was not officially introduced until last Friday (March 12). Through February, however, 1,440 of them had been sold, 1,128 in the final 10-days of the month.

The other new domestic compacts — GMC S-15, Dodge Rampage and Jeep Scrambler—have done well since their introduction. Volkswagen, the first domestic compact, has been hurting in the first two months, but sales were strong throughout 1981, its first full year on the market.

Thus far, the new domestic compacts have not had any negative effect on sales of the conventional pickups, which some observers had anticipated.

IH sells interest in Japanese firm for $51 million

CHICAGO. — International Harvester announced it has sold its 50 percent equity ownership position in a Japanese joint venture to Komatsu Ltd. for approximately $51 million in cash. The joint venture is Komatsu International Mfg. Co., (KIMCO), in which both IH and Komatsu had a 50 percent equity.

Included in the transaction are certain engineering fees as well as agreements under which KIMCO will continue to supply IH with construction and agricultural equipment.

KIMCO builds small wheel loaders marketed through both companies' distribution organizations and small farm tractors sold worldwide through IH deal-

It will also build domestic FWD unit for '84

Chrysler may import Japanese van

By Joseph Bohn
Marketing Editor

BIRMINGHAM, Mich. — Chrysler Corp. will build a domestic front-drive '84 downsized van and also is considering importing a Mitsubishi-built front-drive van as well, according to Joseph A. Campana, Truck Operations Group general manager.

"We're certainly going to have a 100 percent Chrysler-sourced, Chrysler-powered intermediate van in 1984," said Campana. "The Mitsubishi van is a different kind of product. We have the ability to bring it in should we wish to do so."

Campana and Kenyon & Eckhardt officials, meanwhile, announced a new "agency within an agency" at K&E to handle truck advertising exclusively.

The separately created group consists of 15 people, plus four clerical workers, and will handle all account supervision, creative, media buying etc., from Detroit.

Six executive-type people, plus two clerical, are being newly hired with the balance

IMPORT WORLD

Importers put 179 models in U.S. outlets

By John K. Teahen Jr.
Managing Editor

As the spring selling season gets under way, purveyors of the leading imported cars are offering 179 models to tempt American buyers, the annual AUTOMOTIVE NEWS survey finds.

The total is about the same as the revised count of 181 selections at this time last year and is well above the figures for prior seasons.

There were 156 import models two years ago, 158 in the spring of 1979 and 150 in 1978.

The current 179 choices are listed by 26 makes, compared with 29 a year ago. There's one newcomer this time—DeLorean—while four of last year's makes have dropped out of the U. S. market.

Rover and Ford's Fiesta are no longer imported into this country, and production of Great Britain's MG and Triumph has ended.

The 26 makes on the present list account for all but a handful of the imported cars sold in the U. S.

Two-door models dominate the import field, just as they do for domestic makes. There are 103 imported two-doors. Four-door sedans are a distant second with 52, and 21 four-door station wagons are on the list.

Some of the imports call their hatchbacks "three-door" or "five-door" models. Only the side doors are counted in this tabulation.

The major imports offer three convertibles — made by Volkswagen, Fiat and Rolls-Royce. Coupes with removable hard tops are not counted as convertibles in this rundown. Those choices are available from Fiat, Lancia, Porsche, Mercedes-Benz and Ferrari. There's also a domestic in that category — the Corvette Collector's Edition.

The imports no longer have the convertible field to themselves. Chrysler Corp. has returned to the ragtop market, and Buick Riviera will enter it this spring.

• As noted, the import lineup currently consists of 52 four-door sedans, 103 two-doors (or coupes), 21 wagons and three convertibles.

A year ago, the breakdown was 48 four-door sedans, 104 two-doors, 21 wagons and 8 convertibles. The demise of MG and Triumph cut the convertible total.

The price range for imports is, to put it mildly, rather wide. The cars run from $4,799 for a Datsun 210 and a Honda Civic 1300 to $162,500 for a Rolls-Royce Corniche convertible.

The domestics can almost match that at the low end with

Japanese plan major changes

By Matt De Lorenzo
Los Angeles Staff Writer

LOS ANGELES. — The 1983 model year will be one of change for the Japanese import manufacturers, not only in product, but in the way they do business in the U. S.

Two companies, Honda and Nissan, will begin U. S. assembly of some of their models.

Mitsubishi is entering the fray with its own dealer network and product different from those handled by Chrysler.

All the Japanese manufacturers will be operating under the voluntary restraint program, so the Ministry of International Trade and Industry (MITI), rather than market forces, will dictate the number of vehicles exported to the U. S.

Under the quota system, competition among the Japanese will continue to increase in intensity as they vie for larger allocations at the expense of their fellow competitors.

While it may be business as usual among the larger Japanese import companies, there will be some dramatic model changes and technical innovations by the smaller companies as they attempt to carve a niche for themselves.

Toyota presses

Following introduction of the restyled Celica and Supra last year, the nation's leading import car company will turn its attention to the middle and lower ranges of its line during 1983.

The Corona, a mainstay of Toyota's line for almost two decades, is being phased out. With sufficient inventory on hand to guarantee supply through the remainder of the '82 model year, Toyota will cease production of the car in April. At this date, the company says it has not decided to replace the car and will use models on either side of the Corona (Corolla and Celica) to pick up the slack.

However, other sources believe the company may import the FF 120, a front-wheel drive four-door sedan shown at the Tokyo Auto Show, to fill the gap left by Corona and to compete with Nissan's Stanza.

The FF 120's wheelbase is 104 inches and overall length is 173 inches. Power will be supplied by a four-cylinder engine in the 1.8 to 2.0 liter range.

In Toyota's small car lineup, the Tercel is scheduled for reskinning. The FWD subcompact has received only a minor front-end facelift since its introduction in 1979.

There also are reports that the Tercel may be offered with a four-wheel drive option in 1983.

Nissan changes

The name/product change at Nissan will continue in 1983 with a replacement for the 310 series. This new model will follow on the heels of the '82 mid-year arrival of the Nissan Sen-

Ford Fiesta leads import dealer loss

By Kathleen Hamilton
News Editor

The number of dealers carrying imports plunged by 28 percent during 1981, but the loss was almost solely the doing of Ford Motor Co., which stopped importing the Fiesta for nearly 5,000 dealers.

The year closed with 12,017 outlets handling imports, according to the Jan. 1, 1982, AUTOMOTIVE NEWS census. That's the lowest count since mid-1977. The total was 16,681 on Jan. 1, 1981.

But if one ignores the loss of Ford Fiesta deals, the year wasn't all that bad for import-dealer mortality. MG, Triumph and Rover dealers might not agree—their lines were dropped. But only a handful of those weren't dualed with other makes, so the effect on the outlet total was minimal.

Volkswagen — with its preponderance of Pennsylvania-built Rabbits in dealer showrooms — is counted as a domestic make in the latest census (Feb. 22 AUTOMOTIVE NEWS). It had been counted as an import in earlier tabulations.

If VW were still counted as an import, it would have added an estimated 445 outlets to the import dealership total. Then the outlet total would have been 12,462 — still the lowest count since mid-1977.

With VW included as an import, the import dealership total

Dealer loss

Continued from Page E-1

dropped 4,219, or 25.3 percent, during 1981.

Or, put another way, if VW had been a domestic in the January, 1981, census, the total import-dealership count on Jan. 1, 1982, would have dropped 4,213, or 25.9 percent.

Still, 15 import makes increased their dealership totals over year-earlier figures. (This includes DeLorean and Isuzu—both new nameplates during 1981.) Nine either tied their all-time highs or set new records. That contrasts with 11 makes that lost dealerships, including the four dropped lines. Four lines reported no change in their dealer totals.

An analysis of the latest census shows a slight upward swing in the proportion of single-line import dealerships: Of the non-captive import franchises, 26.5 percent are exclusives. That is almost one percentage point higher than one year ago and is two points higher than the level recorded in the mid-year census.

Captive imports are defined as the lines built by overseas companies owned in part by a domestic maker and whose U. S. distribution is controlled by the U. S. partner.

The cars Mitsubishi builds for Chrysler Corp. — Dodge Colt and Challenger and Plymouth Champ and Sapporo — are the only captives still being sold in the U. S.

The Ford Fiesta is, of course, no longer imported, and the Renaults don't qualify because American Motors doesn't have a stake in Renault. Besides, there are still some non-AMC points carrying Renault.

• The captive-import total, at 4,431, hasn't been so low since January, 1976, when it stood at 3,707.

But the latest census showed more domestic dealers than ever before dualing with non-captive imports. That total — 3,563 — is 45 more than the record set in July, 1981.

Much of the increase is attributable to the change in definition of VW. The many Porsche and Audi franchises dualed wih VW are now categorized as imports dualed with domestics; before, they were counted as import-only duals.

When they dual, the Japanese makes tend to dual with the domestics. The European makes—with the notable exceptions of Renault and DeLorean — tend to dual with other imports.

However, the non-captive

incorrectly reads 1983 ←

• The import lines with the greatest number of exclusives are Toyota, 702 exclusives, for 64 percent of its total dealer network; Datsun, 664 exclusives, for 60 percent, and Honda, 371 exclusives, for 46 percent. Honda had the second-largest increase in its proportion of exclusive dealers during the year: At the start of 1981, its 310 exclusives represented only 40 percent of its U. S. network.

Others with large numbers of exclusives: Subaru, 299, or 39 percent of its total network; Mazda, 103, or 13 percent of its dealers; Fiat, 92, or 18 percent; Volvo, 80, or 19 percent; BMW, 78, or 20 percent; Mercedes-Benz, 75, or 18 percent, and Jaguar, 64, or 29 percent of its network.

(Some of these Jaguar dealers still have MG, Rover or Triumph franchises, but since they are selling old stock and function mostly as service-only points, the discontinued lines have been eliminated from this year's new-car dealership count.)

Jaguar's increase in exclusives was the largest; it had none at the start of 1981.

Porsche, Audi and DeLorean had no exclusives.

Because of dualing, the number of franchises, of course, is higher than the number of import outlets. The mere 14,611 franchises recorded in the latest census looks worse than it is, again because of the switch of VW to the domestic census.

If VW had been counted as an import, the franchise loss during 1981 would have amounted to 23.7 percent of those that started the year. And the total of 15,617 (with VW included) would have been the lowest count since July, 1977.

Or, put another way, if VW had been eliminated at the start of 1981, the franchise decline during the year would have been 24.8 percent of the total.

The lines which not only escaped a loss but set records in franchise totals were Toyota, 1,093, tying its record set at mid-year; Honda, 801, bettering its record of 794 set in July, 1981; Mazda, 767, bettering its record of 764 set one year earlier; Subaru, 759, bettering its record of 754 set in July, 1981.

Also, Mercedes-Benz, 409, tying a record first set in January, 1980, and repeated in January, 1981 and July, 1981; BMW, 382, bettering a record of 370 set in January, 1981, and repeated in July, 1981; Isuzu, 193, for its first year in the country; Rolls-Royce, 67, tying its record set in January, 1979, and repeated in January, 1981, and Ferrari, 43, bettering its record of 42, set in July, 1976, and repeated in July, 1981.

• Although they did not set records, the following lines increased their networks during the year: DeLorean, 340 in its startup year; Dodge Colt/Challenger, up 202; Plymouth Champ/Sapporo, up 184; Renault, up 45; Datsun, up 19; Saab, up 9; Maserati, up 6 and Peugeot, up 4.

In addition to Mercedes-Benz and Rolls-Royce, Porsche and Aston Martin recorded no changes in dealer totals during the year.

Europeans gain, Japanese decline

By Kathleen Hamilton
News Editor

Reversing what has become a trend in the auto industry, dealers handling European makes in 1981 generally improved their sales per outlet, while the top Japanese makes lost ground.

A study by AUTOMOTIVE NEWS showed 13 of the 21 largest import lines improved their sales-per-franchise averages over 1980 levels. Nine of these were European makes. Meanwhile, seven makes—including five Japanese lines — lost sales per franchise during the year.

The Mitsubishi-built Dodge Challenger registered no change during the year.

The big upset, at least partly due to import quotas, was that the three largest importers — Toyota, Datsun and Honda — suffered losses during 1981.

Datsun dealers averaged 54 fewer sales in 1981 than they did in 1980. Honda dealers' average fell by 26 sales, and Toyota dealers' average dropped by 13.

In addition, the Plymouth Champ and Dodge Colt, both built by Chrysler Corp.'s Japanese affiliate, Mitsubishi, declined an average of 8 and 5 sales per dealer, respectively.

Other losers for 1981 were Renault dealers, down an average of 2 sales apiece, and Fiat dealers, also down by 2.

• On the plus side of the ledger were two new nameplates, seven makes that had record average sales and another four makes that bettered their 1980 levels.

The new nameplates are Isuzu—whose car dealers averaged 98 sales in their first year—and DeLorean—whose dealers averaged 9 sales each.

Records were set by Mercedes-Benz, whose average of 154 sales was 22 better than the old record set in 1980; Volvo, whose 159 sales beat its 1973 record by 14; Subaru, whose 201 sales beat its 1980 record by 10, and BMW, whose 112 sales beat its 1980 record by 9 sales.

Also, Peugeot whose average of 51 sales beat its old record by 9 (that record was set in 1975 and repeated in 1979 and 1980.) Jaguar, whose 20 sales beat its 1960 record by 5, and Plymouth Sapporo, whose 6 sales beat its 1979 and 1980 record by 1.

The other gainers were Audi, up an average of 21 sales per franchise; Mazda, up 5; Saab, up 3, and Porsche, up 3.

Although dealers handling European cars made gains on the Japanese, they still averaged only about a sixth of the Japanese-car sales per franchise.

Dealers handling the Europeans averaged 36 sales per franchise during 1981; the average for the Japanese lines was 209 sales.

Honda's loss was the first since 1974, and it brought its total sales per dealer to the lowest level since 1978. Toyota hadn't experienced a loss since 1972; Datsun, not since 1978.

In order to qualify for this analysis, a nameplate had to sell at least 1,500 units per half-year. Volkswagen was counted as a domestic make for 1981 because of the preponderance of Pennsylvania-built Rabbits in its product offerings. MG, Rover, Triumph and Fiesta were eliminated because they are no longer being imported.

The 21 import makes that qualified for the annual study by AUTOMOTIVE NEWS averaged 120 sales per franchise—the lowest total since 1976, when the Top 20 makes averaged 117 sales per franchise.

This year's Top 21 represented 99.8 percent of 1981 import sales, once the discontinued makes and VW were eliminated.

Import price rise $488 in past year

By John K. Teahen Jr.
Managing Editor

Prices of the best-selling imported cars have risen an average of $488.09, or 8.25 percent, during the past 12 months, the annual AUTOMOTIVE NEWS analysis discloses.

The boost was considerably less than the average hike of $812.60 (15.78 percent) the previous year, but it was considerably more than the rise of $187.89 found in the 1980 study.

This year's $488.09 is based on a comparison of 78 models offered by 10 makes. Cutoff point was a sticker price of $8,000. Cars in this price group accounted for 69.8 percent of the imported autos sold in the U. S. last year.

That $8,000 cutoff point calls for a bit of explanation. It's high, but that's the key word in automobile prices these days, whether domestic or import.

Not too many years ago, there was a pretty fair selection of cars under $5,000, but those days are gone.

Today, just one domestic checks in below that figure, the Chevette Scooter at $4,997. There are four imports in that class — a Datsun 210 and a Honda Civic 1300 at $4,799 apiece, a Renault Le Car at $4,995 and a Toyota Tercel at $4,998. A year ago, there were eight imports under $5,000.

The next increase will put the Chevette, the Le Car and the Tercel over that figure. It may do the same for the Datsun and Honda price leaders.

The cutoff point for the "popular-priced" imports has almost tripled in the 13 years that AUTOMOTIVE NEWS has been making its annual analysis. In the 1970 report, it was $3,000. Now, it's $8,000.

And in that 1970 study, 93.5 percent of imported-car sales consisted of models priced below $3,000. Today, it's 69.8 percent under $8,000.

As recently as 1978, the cutoff point for popular-priced imports was $5,000, and 79 percent of import sales were in that class.

• The 78 models in this year's under-$8,000 comparison are offered by Toyota, Datsun, Honda, Subaru, Mazda, Colt, Champ, Renault, Isuzu and Fiat.

During the past 12 months, four of those makes have boosted prices more than the average of $488.09 for this group.

Subaru's increase was the largest, an average of $775. Also above the norm were Fiat, $616; Toyota, $578, and Isuzu, $553.

Renault prices are lower than they were a year ago. Le Car stickers are down an average of $247, and the 18i models are unchanged. It works out to a reduction of $124 for the combined Le Car and 18i models.

The increases for the other five makes are lower than the $488.09 average for the group: Honda, $250; Mazda, $417; Datsun, $441, and Champ and Colt, $461 each.

The increases apply only to the models priced below $8,000. In the case of makes that also offer more-expensive units, the average for the entire line would generally be higher.

The U. S.-built Volkswagen Rabbits were not included in the study. For the record, the Rabbit increase in the past year was $317, well below the average for the imports in its price class.

• Turning to the medium-priced imports, the average increase during the past year has been $398.79, or 8.89 percent. The year-earlier boost averaged $1,067.34, or 11.72 percent.

This class is made up of imports priced between $8,001 and $15,000. It accounted for 24.7 percent of the imported cars sold in the U. S. in 1981.

The study compared 44 models offered by 15 makes. Many of those makes are also found in the popular-priced group, and some of them are in the luxury class as well as the medium field.

Challenger, Sapporo and Lancia (one model apiece) are mediums, and so are all the imported Volkswagens. Challenger and Sapporo were in the lower-priced group last year.

Among the models in the medium class are the Toyota Celica GT, Supra, Corona Luxury Edition and Cressida, the Datsun Maxima and 280-ZX 2-seater coupe, the Honda Accord four-door and LX, the Mazda 626 Luxury and RX-7, the Fiat X 1/9 and Spider 2000 and the Renault 18i Deluxe wagon.

The BMW 320i is a medium-priced car, and so are most of the autos offered by Audi, Peugeot, Saab and Volvo. The top models of those makes are priced above $15,000 and thus are counted in the luxury class.

Six makers have boosted their medium-priced models by more than the $898.79 average during the past year. Fiat's hike was the biggest — an average of $2,192 on the X 1/9 and Spider 2000. Lancia, Fiat's sister make, tacked $1,972 onto the price of the Zagato coupe, roadster.

Also above average were Toyota, up $1,294; Datsun, up $1,065; Volvo, up $949, and Audi, up $930. Toyota's increases were topped by a $2,800 bump on the new Celica Supra, while Datsun had a $1,480 bump on the Maxima wagon.

Renault's single model in the medium class was unchanged from a year ago. Also below the class average were Peugeot, $325; BMW, $395; Honda, $500; Saab, $583; Challenger, $646; Mazda, $700; Sapporo, $729, and Volkswagen, $788.

• In the luxury class — over $15,000 — the average increase was $1,778.25, or 6.63 percent. A year ago, it was $2,235.96, or 8.47 percent.

The comparison included 24 models offered by Mercedes-Benz, Porsche, Jaguar, BMW, Peugeot, Saab, Volvo, Audi and Datsun. There are more than 24 models currently priced above $15,000, but some of them weren't on the market a year ago.

Mercedes-Benz had the biggest increase in the luxury class, a hike averaging $3,076. It upped the figure for the group as a whole. Also above the class average was Jaguar, up $2,050.

Lesser increases were posted by Porsche, $498; Peugeot, $665; Audi, $840; Datsun, $1,146; BMW; $1,250; Saab, $1,680, and Volvo, $1,720.

† estimate

Model count

Continued from Page E-1

a Chevrolet Chevette Scooter at $4,997, but they're not even in the ball game at the high end. The most expensive car listed by a major U. S. manufacturer is the Cadillac Fleetwood formal limousine at $28,941.

By country of origin, Japan is the leader among import models by a tremendous margin. Nothing surprising about that. The Japanese cars are the leaders in the sales derby by an equally tremendous margin.

The 10 Japanese makes offer 105 models, nearly four times as many as West Germany, which is in second place with 29. Other totals are Sweden, 14; France, 13; Italy, 10, and United Kingdom, 8.

Toyota and Datsun top the import model list just as they top the sales charts. Each has 24 choices. And, strangely, the breakdown is the same. Each has five four-door sedans, 16 two-doors and three wagons.

Only four other imports are in double figures. Subaru has 16 models, Mazda has 14 and Honda and Volvo have 10 apiece.

Totals for other leading makes are: Mercedes-Benz, 8; Renault, 8; Volkswagen, 8; Audi, 5; Peugeot, 5; Isuzu, 5; Fiat, 5; Champ, 5; Colt, 5; Porsche, 4; BMW, 4; Rolls-Royce, 4; Saab, 4; Ferrari, 3; Jaguar, 3; Alfa Romeo, 1; Challenger, 1; DeLorean, 1; Lancia, 1, and Sapporo, 1.

The Volkswagen figure includes only imported cars. The six U. S.-built Rabbits are in the domestic total.

In counting import models, AUTOMOTIVE NEWS uses the same criteria as in tabulating U. S. cars. A choice of transmissions (4-speed, 5-speed or automatic) or a choice of engines (gasoline or diesel, turbocharged gas or turbodiesel) does not necessarily constitute a separate model.

The import total of 179 models compares with 308 for the domestic makes. (The domestic number includes a couple of entries that are arriving this spring.)

For the imports, 57.5 percent of the models are two-doors, compared with 49.4 percent for the domestics. The four-door sedan share is 29.1 percent for imports and 36.4 percent for domestics.

Blue collar worker shifts to imports

By Matt De Lorenzo
Los Angeles Staff Writer

LOS ANGELES. — The average import car buyer is younger, better educated and more affluent than his domestic-oriented counterpart, according to a demographic profile drawn by J. D. Power & Associates, a market research firm headquartered here.

That profile shows the import buyer's median age as just over 37 years, an income of more than $30,000 and that the person is most likely to have a college degree. The average domestic car buyer has a median age of 47 and an annual income of about $26,000.

While there are marked differences in age, income and education, domestic and import buyers, according to the Power data, do not differ greatly in other attributes such as household position, number of persons in household, sex and total number of vehicles owned.

Two-thirds of both import and domestic car buyers are male heads of household, there are approximately three persons per family unit and both groups own an average of 2.5 vehicles.

J. David Power, head of the firm that has tracked consumer trends in autos for 14 years, notes a change in import owner demographics over the past 10 years. "The imports have broadened their base," he said. In the past, there had been a greater difference in income, age and occupation between import and domestic car buyers.

"We saw more white collar people among import owners," Power explains. "These buyers included professional, technical and managerial types. The blue collar worker was the province of the domestics. Now we're seeing more blue collar workers buying imports."

This shift is a result of the reputation imports have earned as dependable, fuel efficient vehicles. While fuel efficiency may have drawn consumers to imports, it is their dependability that keeps the consumers coming back, Power says. In a recent reading of consumer opinion, dependability and trouble-free operation outpolled fuel economy as the most important factor in selecting a new car. In addition, downsizing of domestic models and upsizing of imports have virtually eliminated the size difference between the two types of vehicles, thereby making imports more acceptable to the mainstream car buyer.

An interesting footnote to the increasing popularity of imports is that these buyers are less interested in low purchase price than domestic car buyers and among Japanese import car buyers in particular, more interested in appearance and styling than either domestic or European car buyers.

Power notes that in the past, styling and appearance was one of the leading factors in the domestic car buying decision.

Although demographic differences between import and domestic car buyers are narrowing, the types of vehicles preferred by the two groups are quite different. Domestic owners are more likely to have two- or four-door sedans, while import owners have more hatchbacks and station wagons.

The penetration of diesel engines is greater among import owners, as are manual transmissions. Domestic car owners are more likely to have cruise control, while import owners lean more towards AM/FM stereos.

Another significant trend the demographics reveal is that the low-income buyer has dropped out of both domestic and import car markets. "In the past year or so, median incomes have skyrocketed," Power says. The rising median income points to fewer and fewer low income buyers.

The impact of less affluent consumers staying away from showrooms has hurt domestic manufacturers more than the import makes, Power feels. "Those people tend to be loyal to domestic makes," he says. This group in particular (low income, domestic car buyers) is feeling the pinch of tough economic times and won't be back until the economy improves.

"When the economy comes back, we'll see more people in the market once they've adjusted to the new prices," he says. "We will see the demographics modify to include lower income people once they return."

In the import segment of the market, the missing buyers, in Power's estimation, are younger people, especially students. This group also has a lower economic standing and in the past they have turned to a number of import models such as

Renault Fuego arrives

By John Russell
New York Staff Writer

PARIS. — American Motors Corp. and Renault are introducing the French auto maker's Fuego sports coupe in the U. S. this month.

And American car buyers, in one way, will enjoy a first over their overseas counterparts. The turbocharged version of the car will make its debut in the U. S. before becoming available in Europe next year.

Ken Nelson, director of car planning for AMC, in an AUTOMOTIVE NEWS interview here, called Fuego "another link in the chain to build awareness of the Renault product line" prior to the time when the U. S.-built Renault R-9 (Alliance) rolls off the lines at Kenosha, Wis., this summer.

With a $5 million budget to launch the Fuego, AMC and Renault are taking aim at several makes in the field including the Japanese-made Datsun 200SX, Honda Prelude and Toyota Celica, and German-built Volkswagen Scirocco.

But the price of the Fuego lineup makes it one of the lower priced sports coupes with a base sticker of $8,495 for the normally aspirated 1.6-liter version to a base turbo price of $10,700.

Nelson said the company expects to sell 7,000 Fuegos during the remainder of 1982 and "should increase that to 15,000 in 1983."

AMC anticipates that 40 percent of U. S. sales will be the turbocharged version.

The decision to introduce a coupe in the U. S. was based on the expansion of the market segment over the past several years. The company said the segment hit 950,000 units in the U. S. during 1981.

The joint French/American effort, Nelson said, was sparked by several factors. Fuego is intended to create brand awareness for Renault in the U. S. and enhance the high-technology image the company is trying to develop.

It is believed the turbocharged Fuego, in combination with publicity of Renault racing efforts, will accomplish this.

In addition, Nelson and Fuego provides AMC dealers with a traffic builder in showrooms prior to the launch of the American built R-9 (Alliance).

Once that model is introduced next fall, Nelson said, there will be a whole family of Renault cars in the U. S. from the subcompact LeCar to the R-18i sedan and wagon.

The decision to send Fuego to the U. S. was also encouraged by success of the car in Europe.

Hubert Seznec, director of product development for Renault, said here that Fuego is the largest selling sports coupe in Europe in its price range.

Last year, 53,000 were sold, with its chief competition coming from Capri (30,000) and Scirocco (29,000).

Seznec noted that of 8.3 million cars sold in Europe last year, 4 percent (330,000) were sports coupes. In the U. S. the share was 9 percent.

He added that in his opinion "the success of the car in Europe was due to its styling."

Renault executives here stress that one of the goals of the Fuego design was to create a true four-seater sports coupe.

Robert Opron, director of styling for Renault, said all surveys showed that a sports coupe is a "selfish" product, but the approach Renault took was to design a coupe with roominess.

Rear seating had to be "more than just tolerable," he said.

Fuego has rear head room of 35.8 and leg room of 30.2 inches.

Styling and aerodynamics combine to give the U. S. version of the Fuego a drag coefficient of .35. The European version is .33.

Opron said the aerodynamic approach was extremely important from the start, and Fuego has the best drag coefficient of any Renault model.

Nelson said AMC intends to import 44,000 Renaults of all types in 1982 and 45,000 in 1983.

AMC is planning first-year production run of 75,000 R-9 versions in the '83 model year.

Blue collar

Continued from Page E4

early Honda Civics and Volkswagen Beetles that were priced in their range. However, price increases and a shift by import manufacturers to more upscale models have virtually eliminated the under $5,000 economy car favored by this group.

"These prospective import buyers — younger people and students — are knocked out of the market," Power says. He adds that this is where a new class of cars, the micro-minis, fits in.

"Micro-minis can fill that void," he says, "if they come in at sub-$5,000 prices in today's market. Micro-minis would augment rather than cannibalize the market."

Four operating units created

Eaton reorganizes automotive component group

CLEVELAND.—Eaton Corp.'s Automotive Components Group has been reorganized into four operating units, it was announced by Group President William E. Butler.

The new Engine and Appliance Components Operations includes Engine Components Division's facilities in North America, Europe, Brazil and Mexico, and the Controls Division's facilities in North America and Europe.

John W. Hanna will serve as operations vice president as well as general manager of the Engine Components Division, North America. Former Engine Components General Manager James J. Davis has left the company.

In the Engine Components Division, Richard Weaver, formerly plant manager at Saginaw, Mich., has been named operations manager.

The new General Products Operations includes the Marshall Division, the Air Controls Division, the Suspension Division, the Foundry Division and the Climate Control Divisions. All divisions report to Arthur Warburton, vice president.

The newly named Hydraulic Components Operations includes the plants in Minneapolis; Shawnee, Okla., and Spencer, Ia. General Manager LeMoyne G. Loseke is responsible for the operation's U. S. and worldwide activities which include a license in Denmark and a joint venture company, Sumitomo Heavy Industries, in Japan.

The Engineered Fasteners Operations are a new addition to the Automotive Components Group. They include the facilities in Cleveland and Massillon, O.; Troy, N. J. , and Hamilton, Ont. Jack P. Martin is general manager.

Butler also announced the retirements of Laurence G. Feiler and Frank H. Byrne. Feiler, former vice president—Fluid Power Operations, had a 30-year career with Eaton. Byrne, former vice president — Control Operations, has served for more than 40 years.

120,753 built, highest total this year

Week's car output rises 49 pct.

By Patricia Hoffman
Staff Writer

With all but five assembly plants operating and two Ford Motor facilities working overtime, last week's domestic auto production was the highest this year and was 49.50 percent above the previous week's output.

The auto makers scheduled 120,753 units last week, up from 80,772 the preivous week, but down 13.77 percent from 140,039 in the comparable 1981 week.

Breakdown for the week by company is: General Motors, 62.52 percent; Ford Motor, 21.85 percent; Chrysler Corp., 10.35 percent; Volkswagen of America, 2.95 percent, and American Motors, 1.33 percent.

So far this year, the makers have assembled 803,381 cars, down 34 percent from 1,217,326 at this time last year.

Checker Motors' Kalamazoo facility was idle for one week last week (March 8) to control inventory.

Also down for inventory adjustment last week was Chrysler's St. Louis point.

GM's Janesville and Oklahoma City facilities remained idle last week for model changeover.

Ford's Atlanta point was down for the second of two weeks to control inventories.

Two-hour daily overtime was scheduled last week at Ford's St. Louis and Wixom facilities. The St. Louis point also worked Saturday (March 13).

Thirteen assembly plants resumed operations last week, including seven at GM. They were Arlington, Baltimore, Flint, Framingham, Leeds, South Gate and Tarrytown.

Also back were Chrysler Belvidere; Ford Dearborn, Kansas City and Lorain; VWoA Westmoreland and AMC Kenosha.

AMC's Kenosha facility will be idle again March 22 for one week.

The GM Fremont plant closed March 12, putting 2,500 workers on indefinite layoff. Fremont had been assembling Chevrolet Celebrity and Oldsmobile Cutlass Ciera.

Appeals court rules for GM; says Toyota infringed patent

WASHINGTON. — The U. S. Court of Appeals for the Sixth Circuit has ruled that Toyota infringed on a patent General Motors holds on a catalytic converter it used until recently.

The decision reversed a lower court ruling which had held that because of prior development work by GM on the catalyst, the patent GM claims for it is obvious.

Patent law holds that the prior innovative work of an inventor cannot be used as evidence of the obviousness of a new twist on his invention, but this had never been tested when is comes to corporate research.

Senior Circuit Judge John W. Peck, writing for the court, said the same principle applies when dealing with corporate research.

Different people may be credited with developing major parts of the catalytic converter, but all of it was done under the aegis of the corporate body, Judge Peck said.

He said it is a reality of today's corporate world that companies underwrite and control research and thus they are entitled to retain patents even though individual employes invented different parts of a design.

Such employes, and those who later combine the whole of the work into one device, are all part of the same team and any later discoveries stemming from this work cannot be invalidated because of the former work, the judge ruled.

Judge Peck remanded the case for trial of the question of infringement. A Toyota spokesman said the company has appealed the decision.

O'Neill suggests a moratorium on imported cars

DETROIT. — Thomas P. (Tip) O'Neill, Speaker of the House and Massachusetts Democrat, has an answer to the import problem that is plaguing this country's auto industry.

It's a temporary solution, but it's one that would be sure to dismay the foreign manufacturers that ship their cars to the U. S.—especially the Japanese.

"If I were president," O'Neill told a Detroit group last week, "I would impose a two-month moratorium on imported cars.

"The Japanese have been unfair and harsh toward America . . . I've never been one for protectionism, but you've got to give a little tickle to the greedy."

Truck production highest of year; 44,832 assembled

Operations at all truck assembly plants, and overtime at Chrysler Corp.'s Warren facility brought last week's domestic truck production up substantially from the previous week's output, and the total was the highest for any week so far this year.

The truck makers planned 44,832 units last week, a 30.17 percent gain from 34,440 the previous week, and up 36.44 percent from 32,858 in the comparable 1981 period.

So far this year, the truck manufacturers have finished 351,388 units, up 2 percent from 344,484 in the same period last year.

Chrysler's Belvidere truck facility resumed operations last week (March 8) after being idle one week for inventory control.

Also back was American Motors' Toledo point, also down because of high inventory.

Volkswagen of America's Westmoreland facility returned last week after a two-week shutdown due to poor sales. The plant is scheduled to be down again the week of March 22.

Daily overtime was scheduled last week at Chrysler's Warren truck facility. The plant worked daily nine-hour shifts.

Week's car output rises in Canada as Ford returns

There was a substantial upswing in Canadian auto production last week as operations resumed at Ford Motors' Oakville and St. Thomas assembly points. Year-to-date output continued to be above that of the comparable 1981 period.

Despite downtime at General Motors' Oshawa (No. One) facility, last week's estimated output of 17,725 cars rose 24.98 percent above the 14,182 in the previous week due to the return of the two Ford plants. The total, however, was 2.87 percent below 18,248 in the comparable week last year.

So far this year, the auto makers have built 143,266 units, a 7.27 percent gain from 133,551 in the comparable 1981 period.

Last week's truck production was targeted at 11,374 units, just a fraction below the 11,431 built the previous week, but down 3.32 percent from 11,765 in the comparable 1981 week.

Year-to-date, the truck makers have built 87,343 units, down 22.10 percent from 112,126 in the same 1981 period.

Ford's Oakville and St. Thomas points returned last week (March 8) after being idle one week for inventory control.

Also back last week was the second shift at GM's Ste. Therese facility.

GM's Oshawa (No. One) facility was idle last week due to overstocked inventory. Operations are slated to resume today (March 15).

All truck points were reported working last week.

Mitsubishi acts to keep its identity pure

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Mitsubishi Motor Sales of America has begun filing formal complaints against a number of Chrysler dealers in several states who identify themselves either through signs or advertising as Mitsubishi dealers.

An MMSA spokesman confirmed that such action is underway, but declined to elaborate.

However, a knowledgeable source indicated that MMSA is keenly aware of the need to establish its own identity in the U. S. and is seeking to eliminate any confusion in the public's mind as to what constitutes a Mitsubishi dealership. MMSA will begin selling cars in the U. S. through its own dealer network next fall.

The source also reported that Chrysler Corp. has recognized the problem and sent a letter to certain dealers last month requesting that they remove from their premises and eliminate from their advertising any material that gives the appearance that the dealer is a "Mitsubishi" dealer.

This request also extends to the use of the Mitsubishi three-

K-car limousines

Phillips Motor Car Corp., Pompano Beach, Fla., has stretched Chrysler K-cars 28 inches to produce limousines with inside dividers, television, bar, rear radio and hide-away jump seat available. Under the hood is a 2.6-liter engine with automatic transmission.

Import stockpile sliced to 51 days; some cars scarce

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. continued to melt away during February to a 51-day supply March 1, down from 56 days Feb. 1 and 60½ days Jan. 1.

The 51-day supply of new imported cars — which included shortages in some of the top-selling nameplates — compared with a 70-day stockpile of new U. S.-built cars on March 1.

Importers and dealers had 371,553 new cars in stock March 1, down slightly from 375,784 a month earlier.

The stockpile of new imported pickup trucks increased slightly during February to 158,972 March 1, compared with 156,574 a month earlier. A pepped-up selling rate, however, resulted in an 118-day supply March 1 compared with a 132-day stockpile a month earlier.

The combined car and truck total was 530,525, a 61-day supply, compared with 532,358 units Feb. 1, a 68-day supply.

• Some shortages persisted, particularly in the top-selling Toyota and third-place Honda lines. Toyota had a meager 24-day supply of new cars, while Honda had an even more emaciated 20-day stockpile. Subaru's inventory was also lean at 34 days, down from 44 days a month earlier.

In stronger shape for the hoped-for spring selling upturn were Mazda, with a 57-day supply of new cars, and Nissan, with a 65-day stock.

Chrysler Corp. had a 78-day supply of Mitsubishi-built Colt, Champ, Challenger and Sapporo cars, down from 123 days a month earlier, and Isuzu had an 84-day stockpile of cars, down from 100 days.

The continued inventory of Japanese-built new cars in the U. S. March 1 totaled 252,095, a 42-day supply, down from 268,131, a 49-day stock, a month earlier.

The stockpile of West German-built cars totaled 70,984 on March 1, a 93-day supply, up from 59,233 units, a 91½-day supply on Feb. 1.

• The March 1 West German inventory included a 52-day supply of BMW, a 62-day stock of Mercedes-Benz and a 68-day supply of Porsche. In heavier inventory were Audi, at 116 days, and Volkswagen, with a 143-

12.9-pct. APR rate rings cash registers

Ohio promo hikes sales 240 pct.

By Jim Plegue
Staff Writer

While most of the nation's new-car dealers faced another dreary sales period last week, a group of northeastern Ohio dealers staged a promotion that bagged them a sales increase—a 240 percent sales increase.

Their secret? The dealers persuaded local bankers to offer 12.9-percent (APR) 36-month financing terms on all purchases of new domestic and imported cars and trucks.

"The activity has been just spectacular," said Bud Greenwood, Greenwood Chevrolet, Youngstown. Greenwood helped organize the promotion for the Auto Dealers Assn. of Eastern Ohio.

"In fact, one of the problems — if you call it a problem — is that we've had trouble taking care of all the customers," he said.

The program ran from March 1 to March 20 in the counties of Mahoning and Trumbull, on the eastern Ohio border. There are about 60 association dealers in those counties. Another 25 association dealers in Ashtabula County — just north of there — joined the program March 14. It continues in Ashtabula County through the end of the month.

During the first 10 days of March, dealers in Mahoning and Trumbull Counties sold 1,159 vehicles, up from 344 units during the equivalent period in February, according to Jerry Thorpe, vice president of the Auto Dealers Assn. of Eastern Ohio.

Thorpe said other dealer associations—inside and outside of Ohio — have called to find out more about the financing program.

Greenwood had a double bonus for his customers — the local financing program coupled with the GM rebate. His dealership's planning potential is 1,370. He sold only 26 new vehicles in January, only 65 in February.

"We've already sold 70 (as of mid-March) and we'll probably sell a total of 130 during March," he said.

"The GM rebates have helped to close a deal when people needed additional cash, but the people we're seeing now don't need the extra cash. They're very qualified. They could easily afford 17 or 18-percent financing. Some of them are qualified to buy the entire dealership.

"I only hope we haven't created a false high for ourselves. Right now we think the recession is over. We just sit back and handle the customers. We hope we can keep the momentum going.

"One of the really good things about the program is that ordered vehicles also apply; so, we're going to have some carryover into April."

• Despite the low interest rate, bankers — a total of 12 banks participated—were quite receptive to the program, Greenwood said. Dealers agreed to forfeit the two-percent finance reserve (finder's fee) that most collect from the banks in exchange for the 12.9-percent loan program.

The program was promoted

Automotive News World Outlook reflects deteriorating economic situation

New-car sales forecast is sliced to 8.7 million

By Edward Lapham
Financial Editor

A worsening U. S. economic situation has reduced the 1982 U. S. new-car sales forecast to 8.7 million units, according to the AUTOMOTIVE NEWS WORLD OUTLOOK.

Just three months ago, the quarterly forecast, a joint undertaking by AUTOMOTIVE NEWS and Data Resources, Inc., projected 1982 new-car sales at 9.1 million units. Total 1981 sales were 8.6 million units.

The reduction in the car-sales forecast coincides with a revised general economic outlook. In the most recent forecast, gross national product was projected to decline at a real annual rate of 4.0 percent in the first quarter and a 0.4 percent annual rate in the second quarter.

The earlier forecast projected a real decline at an annual rate of 2.0 percent in the first quarter with real growth at an annual rate of 0.6 percent in the April-June period.

Otto Eckstein, DRI chairman and a Harvard University professor, said that while there are not yet "significant signs of a pickup in the economy," the outlook has improved in certain respects.

Eckstein said the federal budget with its burgeoning deficits is "the biggest cloud over the recovery" and is responsible for the lowering of the economic forecast.

"The deficits will crowd out housing, reduce consumer spending for durable goods (like autos) and weaken the trade balance," Eckstein said.

The economist cited several indicators, currently at or near alltime lows, which point to a recovery.

"Extraordinarily low levels of consumer credit reflect dramatically improved liquidity of the household sector," he said. Household liquidity is generally considered an essential factor for any period of prolonged car-sales recovery.

John Hammond, director of DRI's Automotive Service, told AUTOMOTIVE NEWS he believes there is still potential for a recovery and that there is indeed

New inventory system to cut GM suppliers

By Kathleen Hamilton
News Editor

ANN ARBOR, Mich.—General Motors has begun a shift to a Japanese-style inventory system that could cut the number of its suppliers in half during the next three to five years, GM Vice President Robert Stone revealed.

Ford Motor Co. and Chrysler Corp. have also begun the switch to the just-in-time (kanban) inventory system, although there is no indication of how extensive the changeover will be.

Although GM has no set schedule for reducing suppliers, its shift to long-term contracts, single sourcing and a kanban inventory system especially in the Midwest is likely to trim the number of suppliers by perhaps half, according to Stone, vice president for materials management.

GM currently has $9 billion tied up in components inventory at any given time, Stone said. He said that is more than the entire Japanese auto industry.

Stone's comments came during a two-day conference here on the U.S. and Japanese auto industries, sponsored by the University of Michigan.

GM is concentrating its inventory-reduction efforts in Michigan, where proximity to internal and outside suppliers facilitates the kanban inventory system, Stone said.

Under it, plants receive precisely the number of components they need at the last possible moment, eliminating the costs associated with the usual 10-day parts inventory at assembly plants.

GM's Michigan assembly plants already receive engines, axles, frames and transmissions according to orders placed every morning, instead from weekly production schedules.

Three Michigan engine plants have begun operating under the kanban system: Flint Engine (Chevette, truck V-8), Pontiac (4-cylinder X-car, F-car and A-car) and Flint Motor (4-cylinder J-car and 6 cylinder truck).

• Outside Michigan, the Linden (N.J.) and Tarrytown (N.Y.) assembly plants are testing the kanban system and including outside suppliers in the pilot. Stone predicted the plants outside Michigan should ultimately save $100 million over the five years by using kanban to varying degrees.

The five-year GM plan calls for a total inventory reduction of about 25 percent, Stone said.

During the last two years, GM has begun signing multiyear contracts with suppliers — again, patterned after the Japanese fashion of close cooperation between suppliers and auto makers. Suppliers thus are able to amortize their costs over contract periods of up to five years in GM's case, Stone said.

GM will be negotiating with some of its suppliers to relocate close to the plants they supply, Stone said.

There will be fewer instances in which several firms supply a single part, he said. There also will be more direct suppliers and more negotiations with suppliers. He predicted mergers among supplier firms as a result of the GM move.

Although the vast majority of GM's suppliers still have single-year contracts, quite a few multi-year contracts have been signed in the last two years, he said. Producers of multi-part components are most suited to this kind of contract, he said.

All the tire makers, the large supplier firms like Budd and "lots of small companies" are equipped to supply GM under the kanban system, Stone said.

Although they may have to upgrade operations, small suppliers will remain important to GM, he said. About half the components of GM cars are supplied from outside firms, and this percentage is expected to increase, he said.

Ride 'em, cowgirl!

Bobbie Newman, Miss Rodeo USA, will represent the International Rodeo Assn. and Carl Burger Dodge, La Mesa, Calif., in style as she travels around the country in a new Dodge Rampage pickup. Here, she receives the keys from Neil Fendly, dealership general manager.

Bill encourages Japanese-style worker bonuses

WASHINGTON. — A bill to encourage greater productivity among U. S. workers through wage and salary reforms has been introduced in the House by Rep. John Seiberling, Ohio Democrat.

The Productivity Incentive Act of 1982, Seiberling said, "would encourage U. S. employers to restructure their wage and salary systems in order to give employes a bigger stake in the company's performance as well as greater security against layoffs."

The bill takes its cue largely from Japanese wage and salary systems, in which workers receive a base wage plus a semi-annual or annual bonus which, if profits are high, can equal as much as six months' pay.

If passed, the bill would encourage a similar bonus system based on company profits or cost savings, in amounts up to four months' pay.

Seiberling said employers would receive a tax credit equal to 5 percent of the bonuses paid out in a calendar year. This system would have to be approved by the affected union, in accordance with federal labor laws.

Seiberling said this system would give workers incentive to be more cost-conscious and more profit-conscious, since their pay would depend to a considerable degree on the earnings of the company.

Two-part format is modified

Q & A set for GM annual meeting

DETROIT. — General Motors has moved up the starting time for its annual meeting May 21 to 9 a.m., so that a regular board meeting and a separate regional stockholder forum can be held in the afternoon.

John W. McNulty, vice-president in charge of public relations, said that Chairman Roger B. Smith will preside at the annual meeting in the Fisher Building.

It will include the election of directors, consideration of stockholder and management proposals and a period for questions and comments on the business.

Earlier reports had indicated that GM intended to limit the annual meeting to items mandated by law, such as election of directors and consideration of management and stockholder proposals, and defer the general discussion and questions until the afternoon meeting.

Critics of this plan had complained that since the directors would be meeting at the same time as the afternoon session at the GM Technical Center, stockholders would not be able to ask questions of and make comments to high officials of the company. However, GM has announced that President F. James McDonald will be at the afternoon meeting, as will a panel of GM experts, to answer questions informally.

• The afternoon meeting will be another in a series of informal regional stockholder forums GM has been holding since 1978. To date, more than 25 percent of GM's 1.1 million stockholders have been invited to 52 forums. More than 32,000 GM stockholders and guests have attended in 43 cities in the U. S. and Canada — more than have attended the last 18 annual meetings, McNulty said.

"One of the things that appeals most to stockholders about the forums is that every question is answered," McNulty said. "The questions are written, and if we don't get to one at the meeting, we send a reply by mail. So far, we have answered, at the forums or by mail, about 4,200 questions."

The forum will be held at 2 p.m. at the Design Dome at the Technical Center in suburban Warren, Mich.

"At every forum, we have a member of the Executive Committee, who is also on the board, to speak and answer questions," McNulty said. "For this forum, we're fortunate to have F. James McDonald, president, as our main speaker."

In addition to McDonald, GM's chief operating officer, a panel of GM officers will be on hand to help respond to shareholders.

By starting the Annual Meeting at 9 a.m. instead of the usual 1 p.m., adjournment can be expected before lunchtime, and the board of directors will be able to hold a regular monthly meeting the same afternoon.

McNulty added that five other regional forums will be held early this spring—in Oklahoma City, April 8; Chicago, April 13; Cincinnati, April 23; Cleveland, May 4, and Boston, May 12.

A break-even year is seen for Chrysler

WASHINGTON. — The outlook for Chrysler Corp. given by Michael A. Driggs, head of the Treasury Department's Office of Chrysler Finance, is more optimistic than the ones given in the latest Chrysler report to Congress for the period ended last September.

Driggs resigned his job as chief administrator of the Chrysler loan guarantee program shortly after his Congressional testimony and was named head of the new Office of Auto Industry Affairs in the Commerce Department.

He indicated he expected Chrysler to "break even" this year and perhaps even to make a profit.

Credit for the improvement in cash position, according to Driggs, should go primarily to the sale of Chrysler Defense to General Dynamics for almost $350 million and agreement with the union to defer pension payments worth $220 million. This should help cash flow until well into 1983, Driggs said.

Chrysler still has available $300 million in federal loan guarantees after its earlier drawdowns of $1.2 billion, but Chrysler Chairman Lee Iacocca has said the company will not come back again since the trouble and the publicity involved causes it to lose more in sales than the loans it can negotiate.

For example, the sale of the defense subsidiary was an apparent substitute for asking the government for more help. Each time Chrysler asks for money, the three-member Loan Guarantee Board must find the company "viable" and rule that eventual repayment is expected. The last report stopped short of making this finding.

• Driggs asked for $1.211 million for fiscal 1983 for administrative expenses to run the temporary Chrysler program.

The expenses include: "Negotiations relating to the guaranteed and unguaranteed portions of Chrysler's four-year financing plan; the continuing analysis of Chrysler's four-year operating plan; financing plans, and other plans necessary for the board

Peck seeking makers' help on air bags

WASHINGTON. — NHTSA Chief Raymond Peck thinks Senator John Danforth, Missouri Republican, may be putting the cart before the horse when it comes to air bags.

Danforth is the sponsor of legislation that would grant auto makers a $300 refundable tax credit for each car they equip with an air bag and impose a $300 excise tax on any car not equipped with an air bag beginning in the 1984 model year.

Peck thinks there are still some things to prove with air bags before they are foisted wholesale on the American public as would be the case if the Danforth legislation were passed, and he also thinks it rather unfair to punish those who do not buy air-bag equipped cars, particularly if they are conscientious about using seat belts.

Rather than a financial incentive approach, Peck said he would prefer to see a large-scale demonstration of air-bag technology to the American car buyer first and thereafter let the market work its will. He is currently trying to work out such an air-bag demonstration program with several manufacturers.

These would include General Motors, Ford Motor Co., Mercedes-Benz, BMW, Volvo, some of the Japanese makers. To date only Ford has given positive indication. GM has told the agency that for the time being it is not interested in such a program. The others, though experienced with air-bag technology, have not as yet responded to Peck's request.

• Peck said his demonstration program, similar to that first proposed by Transportation Secretary William Coleman in 1976, would hopefully put about 500,000 air-bag-equipped cars on the road. Before getting started, however, he said there were still some issues to be resolved.

First there is the problem of air bags in smaller cars, he said. Based on work done by certain Japanese makers, Peck said, it would appear that current systems would exceed the noise level for permanent ear damage when actuated. This results from having to deploy very quickly in a limited amount of space, he said.

Peck said NHTSA is also looking at whether there would in fact be meaningful insurance premium discounts available to consumers who purchase air-bag-equipped cars and whether a sharing of air-bag technology might not be possible without running into antitrust problems.

Peck also said that the agency was considering using only driver side air bags in the demonstration program and that it was also investigating the possibility of getting the government, both military and civilian, and other major vehicle customers in the private sector, to commit to buying such air-bag-equipped cars.

Peck said he could give no definite date for commencing the demonstration program.

pent-up demand for new cars.

"The rebate programs have brought people into the market although they haven't made the decision to purchase yet," Hammond said. "The limited response to the rebates is just a further reflection of the limited control the auto makers have over their own environment. There is little they can do until we have a stable economy."

Hammond did say, however, that the limited response to the rebates has caused some reevaluation of price elasticity and price sensitivity.

"Let's put it this way," he said. "Sensitivity to price is something less than it was before we went into the current recessed economy but it is still keener than it has been historically."

Hammond also said he believes the falling price of gasoline will affect sales and consumer choices.

"There's been a bubble effect on consumer awareness because prices have fallen so quickly," he said. "The consumer is very aware.

"A portion of the decline is expected to be structural in nature; that means it will lower vehicle operating costs over the long-term.

"It also means that it will support a bigger, longer large-car recovery while having a null effect on small cars."

Hammond believes that the falling gasoline prices will increase the sales of large cars while not impacting small-car sales because lower operating costs are not as important a purchase motivational factor as price.

Notching 25

Gwynn G. Bacon, right, of Allen Gwynn Chevrolet, Glendale, Calif., is congratulated on his 25th anniversary as a dealer by Robert D. Canedella, Chevrolet's Los Angeles zone manager.

This means it is likely the current relative strength in larger-car sales will continue to escalate and lead the industry in the coming recovery, according to the AUTOMOTIVE NEWS WORLD OUTLOOK/DRI projections.

• The quarterly forecast said that light-duty truck deliveries in 1982 should total 2.24 million units compared with 2.04 million deliveries in 1981. By 1983, the forecast said light-truck deliveries will reach 2.41 million units.

Heavy-duty truck (Classes 6, 7 and 8) deliveries are expected to increase only slightly this year to 240,000 units from 230,000 units last year. In 1983, however, heavy-duty-truck deliveries should total 280,000 units.

The automotive situation outside North America will improve more dramatically in 1982, according to the forecast.

For example, total car production in Western Europe is expected to recover to 10.72 million units this year compared with 9.81 million units in 1981 and 10.34 million units in 1980.

New-truck registrations in Western Europe this year are expected to decline slightly, but recover in 1983.

Among the major car-producing nations, Japan is expected to continue to expand its output at a rapid pace.

Japan, which built less than seven million cars last year and exported just under four million units, will build more than seven million units this year and export in excess of four million units.

By 1986, Japan will have increased its annual car production to about 8.1 million units, AUTOMOTIVE NEWS WORLD OUTLOOK said, and will export more than five million units.

Total car production in France, West Germany and Italy is expected to remain fairly stable through 1986, as are the respective levels of exports from those nations.

Third-generation Lee signs with Chevrolet

MONROEVILLE, Ala. — John T. Lee III has signed a Chevrolet franchise and will do business as Lee Motor Co., Inc.

He is a third-generation Chevrolet dealer here. His grandfather signed the original franchise in 1933.

Domestic total is 156,532 cars

Early-March sales 23 pct. below '81

By Jenny L. King
Staff Writer

"Unremarkable" best describes the March 1-10 selling period for the domestic auto makers this year. Sales were down substantially from 1981, but they were not as weak as they had been in January nor as healthy as they were by the end of February.

Sales by five major U. S. builders numbered 156,532 in early March, down 23.36 percent from 204,231 a year ago. It was the seventh straight drop this year, calculated on a daily rate basis.

In fact, on that basis there have been no periods surpassing 1981 levels thus far this year, which explains why there is a 19.40-percent gap between year-to-date sales. For 1982 the total is 981,612, compared with 1,217,848 in 1981.

The early-March daily selling rate averaged 17,392, based on nine days. That was down 31.87 percent from 25,529 for eight days a year ago.

DOMESTIC SALES

	March 1-10, 1982	March 1-10, 1981
AMERICAN MOTORS	2,400†	4,700†
Chrysler	4,104	3,104
Imperial	110	195
Plymouth	8,060	12,055
Dodge	7,166	10,546
CHRYSLER CORP.	19,440	25,900
Ford	25,500	32,233

Lincoln	2,403	2,136
FORD MOTOR	37,371	44,227
Buick	15,028	21,608
Cadillac	5,731	5,544
Chevrolet	37,902	54,619
Oldsmobile	22,468	26,397
Pontiac	13,629	17,381
GENERAL MTRS.	94,758	125,549
VOLKSWAGEN	2,563	3,855
INDUSTRY TOTAL	156,532	204,231

†—Estimate.

All five auto makers were down during the period. General Motors dropped 24.53 percent, to 94,758 from 125,549 last year (down 32.91 percent daily rate). Ford Motor Co. sales of 37,371 were down 15.50 percent from 44,227 (down 24.90 daily rate).

Chrysler Corp. dropped 24.94 percent (33.28 percent daily rate), to 19,440 from 25,900. Volkswagen of America dealers retailed 2,563 new Rabbits, down 33.51 percent from 3,855 (down 40.85 percent daily rate), while estimated sales for American Motors were 2,400, down 48.94 percent from 4,700 (down 54.51 percent daily rate).

• GM slipped to 60.54 percent of the market from its year-ago 61.47 percent. Ford earned 23.87 percent, up from 21.66 percent. Chrysler was squeezed back to 12.42 percent from 12.68 percent. VWoA had 1.64 percent, down from 1.89 percent, and AMC sales accounted for 1.53 percent, down from 2.30 percent.

Chrysyer, Lincoln and Cadillac were the only makes to improve their lot based on year-to -year sales. Chrysler was up 32.22 percent, Lincoln was up 12.50 percent and Cadillac was up 3.37 percent.

Imperial was the loss leader in early March, its sales down 43.59 percent. Plymouth was down 33.14 percent and Dodge was down 32.05 percent.

Ford sales dropped 20.89 percent, Mercury was down 3.96 percent. Buick dropped 30.45 percent, Chevrolet was down 30.61 percent, Pontiac was down 21.59 percent and Oldsmobile was down 14.88 percent.

ATAM selects leaders

The 104-member Automotive Trade Assn. Managers recently elected officers to serve during 1982. From left, they are: Richard D. Meek, executive vice president, Connecticut Automotive Trades Assn., Hartford, president; Keith W. Howard, executive vice president, Automobile Dealers Assn. of North Dakota, Fargo, vice president, and, as secretary-treasurer, William F. Morie, executive vice president, Georgia Automobile Dealers Assn., Atlanta.

GM rebates now include cars ordered by March 31

By Marjorie Sorge

General Motors has extended its "Let's Get Moving" rebate program to include certain 1982 cars and trucks ordered during the bonus period but delivered after it ends.

Phase II of the promotion will allow customers to order certain cars and trucks between March 15 and March 31 under the bonus program. Phase I pays rebates to customers whose cars and trucks were delivered between Feb. 1 and March 31. It was announced Jan. 29, the day after GM's contract talks with the UAW broke down.

Under the new program customers will get the following bonuses from General Motors on ordered vehicles:

1. $2,000 on Cadillac Seville.

2. $750 on Chevrolet Cavalier, Pontiac J2000, Oldsmobile Firenza, Buick Skyhawk, Cadillac Cimarron, Chevrolet Citation, Pontiac Phoenix, Oldsmobile Omega, Buick Skyhawk and Chevrolet C/K 10, 20, 30 and GMC C/K 1500, 2500 and 3500 regular cab pickup trucks.

3. $500 on Chevrolet Celebrity, Pontiac 6000, Oldsmobile Cutlass Ciera, Buick Century, Chevrolet Chevette and Pontiac T1000.

GM will pay 75 percent of the rebate while participating dealers will contribute 25 percent,

1981 new-car market slips 3.6 pct. to 8,443,919

By Jenny L. King
Staff Writer

New-car registrations in the U. S. in 1981 dropped 3.62 percent from the 1980 total. Both domestics and imports were down, but the U. S. makes suffered the greater decline.

New-car registrations in the U. S. during 1981 totaled 8,443,919, according to figures compiled by R. L. Polk & Co., down 3.62 percent from 8,760,937 in

Table on Page 42.

1980, and a whopping 18.47 below the 1979 count of 10,356,695.

Domestic-only registrations of 6,012,239 were down 4.44 percent from 6,291,757 in 1980 and were the lowest since 1961 when only 5,476,125 new U. S. - built cars were registered.

Registrations of new imported cars remained comparatively high, but missed the year-earlier record by 37,500 units. Their share of the total market continued to climb, to 28.80 percent from 28.18 percent in 1980.

The 1981 import total was 2,431,680, second best year for the foreign makers and down only 1.52 percent from the record 2,469,180 set in 1980.

December registrations numbered 611,520, down 0.36 percent from 613,740 in November, and down 13.97 percent from the preceding December's 710,821. It was the lowest for the month since 1974 when 586,081 new cars were recorded. Record for December is 989,114, set in 1972.

Chrysler Corp. was the only corporate maker to increase its share of the diminishing automotive pie. In 1981, Chrysler climbed to 8.76 percent from 7.14 percent the year before.

Imports edged up to 28.80 percent of the total from 28.18 percent in 1980.

General Motors products accounted for 44.50 percent, down from 46.41 percent. Ford Motor Co. slipped to 16.32 percent from 16.51 percent. American Motors was squeezed back to 1.58 percent from 1.72 percent.

Miscellaneous domestic nameplates accounted for 0.04 per-

U. S. drops antitrust suit on Mercedes parts sales

WASHINGTON. — The Justice Department has dismissed a civil antitrust suit filed against Mercedes-Benz of North America in August, 1979, in federal court in San Francisco.

Antitrust Chief William F. Baxter decided that the "tying" arrangement involved does not have anti-competitive effects in the luxury-car market.

The case alleged conspiracy to restrain competition in the sale of replacement parts for Mercedes-Benz cars to its dealer body. It named dealers and others as co-conspirators.

Starting sometime in 1974 and continuing until the suit was filed, the suit charges that MBNA conditioned franchises on dealers' buying parts solely from Mercedes and, therefore, sales of these parts by independent makers had been restrained.

In 1978, the Justice Department said, M-B dealers sold more than $130 million worth of replacement parts, only 30 percent of which came from the independents. The suit asked for permanent enjoinder.

MBMA gets its replacement parts from Daimler-Benz and from firms that make them to D-B specifications. MBNA sells them only to dealers except in emergencies.

Independent distributors get parts from OEMs, either directly or indirectly through brokers or exporters, and from other sources in Europe, the U. S. or elsewhere. They, in turn, resell to jobbers, independent garage owners, service stations and M-B dealers.

The suit charged that MBNA and its dealers agree to adhere to a franchise provision which requires buying "virtually all" replacement parts from MBNA and that MBNA has enforced the provision by, among other things, monitoring dealer purchasing.

• Baxter said the tying arrangements alleged in the MBNA case "do not harm competition by creating market power."

Baxter also noted that pretrial rulings left the government in the position of having to prove that Mercedes has enough market power in the car business to restrain competition in Mercedes replacement parts.

A question also not settled was whether MBNA has business justification — i.e., quality control — for the tying arrangement.

Baxter concluded that litigation could use up resources that could be shifted to other areas more likely to yield competitive benefits to consumers.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. Registrations for Oklahoma not available; delayed for Iowa.

New-car registrations wind up at 8,443,919

'81 market tally shows 3.6-pct. drop

Continued from Page 4

cent of the 1981 total, the same share they had in 1980.

Domestic-only registrations in 1981 were divided this way: GM, 62.50 percent; Ford Motor Co., 22.92 percent; Chrysler Corp., 12.30 percent; AMC, 2.22 percent, and miscellaneous, 0.06 percent.

A year earlier, domestic-only shares were: GM, 64.62 percent; Ford Motor Co., 22.98 percent; Chrysler Corp, 9.94 percent; AMC, 2.40 percent, and miscellaneous, 0.06 percent.

By size segments, subcompacts, luxury models and imports increased their market shares in 1981 compared with 1980. Subcompacts gained the most while standard-size cars sacrificed the greatest share.

In 1961, subcompacts accounted for 15.42 percent of the registrations total, up more than two percentage points from 13.37 percent in 1980. Imports climbed to 28.80 percent from 28.18 percent, and luxury models went to 4.80 percent from 4.59 percent.

Standard-size cars fell back to 9.99 percent of the total 1981 market, down from 11.20 percent. Intermediates accounted for 20.46 percent, down from 21.54 percent, and compacts dipped 0.59 percentage points, to 20.53 percent from 21.12 percent.

• In December, every major U. S. maker was down in new registrations, as were the imports as a group. Chrysler Corp., though off in numbers, increased its share of a smaller total slightly while imports were up 3.73 percentage points.

Chrysler edged up to 9.02 percent from 8.95 percent the preceding year. Imports advanced to 30.14 percent from 26.41 percent. General Motors earned 44.26 percent, down from 45.59 percent. Ford dropped 2.36 percentage points, to 14.96 percent from 17.32 percent, and AMC's 1.57 percent was down 0.13 percentage points from 1.70 percent. Miscellaneous domestics had 0.05 percent in 1981 and 0.03 percent in 1980.

Domestic-only registrations in December were divided this way: GM, 63.34 percent; Ford Motor, 21.42 percent; Chrysler Corp., 12.91 percent; AMC, 2.26 percent, and miscellaneous domestics, 0.07 percent.

A year earlier, domestic-only market shares in December were as follows: GM, 61.95 percent; Ford Motor, 23.53 percent; Chrysler Corp., 12.17 percent; AMC, 2.31 percent, and miscellaneous domestics, 0.04 percent.

By size segments, U. S. subcompacts and luxury cars gained slightly compared with their December, 1980, shares, and imports leaped almost four percentage points to 30.14 percent from 26.41 percent of the market.

Subcompacts accounted for 14.08 percent, up from 13.79 percent; luxury models represented 6.00 percent, up from 5.16 percent; compacts skidded 3.38 percentage points, to 18.56 percent from 21.94 percent; intermediates slipped to 20.44 percent from 21.69 percent, and standard-size models stood at 10.78 percent, down from 11.01 percent.

Buick leader

Morton C. Mallory, right, Mallory Buick Co., is presented with a plaque, citing him as the largest sales volume Buick dealer in Missouri for 1981, by Paul Britton, St. Louis zone manager for Buick.

EPA reconsiders rules governing lead in gasoline

WASHINGTON. — In a reexamination of the need for phase-down of lead in gasoline, EPA is asking the public to comment on a "wide range of alternatives."

The phase-down was initiated when emission controls on vehicles went to catalyst technology, since catalysts are poisoned by lead. Last year, the Vice President's Task Force on Regulatory Reform asked EPA to see whether the phase-down was needed, since the turnover of the vehicle fleet creates a demand for unleaded gasoline—now estimated at 53 percent of production.

EPA estimates that with or without the current restriction of 0.5 grams per gallon, in five years the average gasoline lead content would reach that level under normal market conditions.

Proposals being considered include retaining the current 0.5 grams per gallon for all refiners or imposing that level only in selected urban areas. Different ways of averaging are also being considered.

Large refiners are now meeting the standards, but small ones (those not owned by larger refiners and with capacity of less than 50,000 barrels a day) have been permitted to meet a less stringent standard until Oct. 1, 1982.

EPA has proposed suspension of that deadline pending outcome of its review. EPA says small refiners produce only 5 to 7 percent of the nation's gasoline.

GMAD names Harper

WARREN, Mich. — Earl E. Harper has been appointed manager of the GM Assembly Division plant constructed in Detroit/Hamtramck. He formerly was manager of the division's Corvette assembly plant at Bowling Green, Ky.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. Registrations for Oklahoma not available.

Signs point to second-half recovery

A recovery in major markets of Western Europe and North America can be expected in the second half of this year, according to a world auto forecast by DRI Europe (formerly Economic Models).

Particularly strong demand is expected in France as a result of a boost to personal incomes created by policies of the Mitterand administration.

The pace of the recovery in the U. S. is uncertain, since the Reagan Administration's personal tax cuts have yet to affect the market. Very tight monetary conditions continue to hold back new car sales in the U. S., but as interest rates fall there could be a rapid rebound as early as the first half of this year, the report says.

DRI believes established producers in Europe and North America wil continue to benefit from import restrictions on Japanese cars. But these will begin to ease in 1983.

It also points to the number of new model introductions scheduled for this year, which will give impetus to the flat markets.

However, market recovery, import controls and new products cannot hide the fact that the European industry is still fragmented, has generally much higher levels of costs than Japanese competition and, in many cases, requires large state subsidies to survive.

The DRI forecasts are moderately optimistic for 1982 and next year, but even in periods of growth the expected production volumes of each of the major European manufacturers will inevitably remain below 2 million cars annually. The consequences will be that the industry will continue to register losses until 1983 at the earliest.

In a separate report, DRI forecasts that competition in Europe's commercial vehicle industry will tighten as manufacturers face very slow rates of growth in European truck demand, rising import penetration and a temporary slowdown in world markets.

Although the worst is said to be over, last year's total market for trucks over 3.5 tons in the six main EEC countries — Belgium, France, Holland, Italy, UK and West Germany — was expected to amount to 195,000 units, down 17 percent from 1980.

A more gradual recovery of European economies from the aftermath of OPEC 1 and OPEC 2, continued high interest rates which depress business investments, and the cushion of vehicles temporarily laid up during the recession, says DRI, will ensure that the European market grows only modestly this year. It is expected to rise by seven percent to 209,000.

As the economic recovery gathers pace, some rebuilding of fleets is anticipated next year and in 1984. However, truck markets offer little overall medium term growth, with average growth rates from 1978 to 1986 of less than one percent.

European manufacturers softened the blow of depressed domestic markets by shifting production for exports beyond Europe. A boom in OPEC markets helped compensate, and the decline in European currencies against the dollar in 1981 dominated world markets.

Exports to countries beyond Europe increased to over 40 percent of truck production in 1981. Whether this degree of export-orientation can be maintained will be vital to the future of European production, DRI maintains.

Short term problems will be created as the recent OPEC boom runs out of steam this year, although DRI believes the German—and to lesser extents the French and Italian—producers will continue to be successful on world markets until the mid-1980s.

Light commercial-vehical manufacturers face a more difficult future, as Japanese producers have developed an outstanding comparative advantage in this area.

Japanese market: Mature and static

Although Japan's car population has expanded rapidly since 1970 (autos in use have risen at a compound annual rate of 10.5 percent), passenger car demand over the 10-year period has been sluggish. Sales have risen at a mere 1.8 percent annually, with peak-to-peak (1973-1979) growth at a paltry 0.6 percent.

The lethargy is partly due to a moderate shift in truck demand — especially the high-MPG mini-vehicles. Nevertheless, even including truck demand, vehicle sales have grown only at a 2.1 percent annual pace. "As we see it," says Sanford C. Bernstein & Co., Inc., auto analyst David Eisenberg, "the market has simply matured under the influence of several factors: the high cost of motoring, crowded driving conditions, inadequate parking facilities and an excellent mass transit system." Consequently, replacement demand now makes up 65 to 70 percent of new car sales — similar to the replacement demand relationships in the U. S.

"Moreover," says Eisenberg, "but for the rapid rise in drivers licenses issued to women since 1975 (70 percent growth versus 20 percent for men), net new demand probably would have risen much less than the average of 1.4 million units per year."

In the past year, static sales trends have reflected Japan's general economic malaise, as suggested by sluggish personal spending figures and restrictive fiscal and monetary policies. The government has been attempting to stimulate sales (and offset a weakening export trend) by reducing the official discount rate.

"Given the likelihood of a cyclical economic recovery in Japan later this year, and in view of the significant new-product launches scheduled by virtually all the Japanese auto makers," says Eisenberg, "we expect a moderate recovery in vehicle sales commencing by year-end; combined car and truck deliveries in 1984 are expected to rise about 11 percent from the 1979 level, to 5.7 million units."

Against the backdrop of a mature marketplace, Japan's auto makers are expected to continue the intense struggle to gain competitive position. The high level of new-product activity, and attempts by Honda and Toyo Kogyo to penetrate the low-end markets, are expected to ensure continuation of pricing pressures.

Court rules state procedure unconstitutional

GM upheld in bid to open Tenn. deal

WASHINGTON. — Procedures set up under a 1977 Tennessee law that give auto dealers the right to prevent the opening of new dealerships breach the state constitution, according to the state's chancery court.

Under the law, the court ruled, auto makers are denied due process because they do not have a fair and impartial tribunal. The law also violates the state constitution's anti-monopoly clause, the court ruled.

The case, General Motors versus Capitol Chevrolet Co., started when GM wanted to set up a new dealership in Nashville. GM was overruled by the Tennessee Motor Vehicle Commission, which has 11 members, nine of them auto industry members. During the entire 26 years of the commission, the industry members have always been dealers.

The court criticized the paucity of criteria to guide the commission. Except for determining the "relevant market area," it considers only the adequacy of existing service and the "propriety" of granting a new franchise.

In assessing the membership of the commission, the court said:

"Although the section covering the establishment of new dealerships purports to protect the public, it is obvious the entities which benefit from it are existing dealers. Moreover, it is significant that a statute purportedly designed to protect the public's interest does not allow the public the opportunity to protest new dealerships."

The proposed new franchise was in Davidson County. Three of the four Nashville Chevrolet dealers were among the seven protesting the new franchise. The court noted that the unconstitutionality resulted because those making the decision had a monetary interest in the outcome.

The commissioners are members of the auto trade association. The commission chairman runs a dealership within the market area in question, and two other dealers operate on the fringes of that area.

The court said it was not necessary to show that members had a "direct and positive financial stake," but it was enough to show the "situation offers a possible temptation to the commissioners to decide the case based upon their own pecuniary interest as automobile dealers."

While a state may legitimately limit a manufacturer's right to set up new outlets, it cannot do it with inadequate procedures or through parties that have a vested interest in the outcome, the court ruled.

And now, the Golf turbo diesel

Volkswagen's new Golf turbo diesel—unveiled at Geneva along with an Audi 80 turbo diesel and a more powerful version of the Audi Coupe—shares the look and trim of the sporty GTI gasoline model. Power in European versions is up from 54 to 70 HP.

Domestic makers schedule 116,938 autos

Car production declines for week

By Patricia Hoffman
Staff Writer

Domestic auto output last week dropped slightly from the previous week's total because of production cuts at two assembly points and downtime at General Motors' Detroit (Cadillac) facility.

Volkswagen of America cut Rabbit production at Westmoreland. Output dropped from 3,449 cars the previous week to 715 as the plant prepared for downtime starting today (March 22) due to sagging sales.

Output was also reduced last week at GM's Lansing facility. The plant dropped to one-shift operations at a rate of 60 units an hour. It formerly built 60 an hour on two shifts.

Last week's auto production was targeted at 116,938 units, down slightly from 118,004 the previous week, and a 19.59 percent drop from 145,422 in the comparable 1981 week.

Breakdown for the week by company is: GM, 60.75 percent; Ford Motor, 24.36 percent; Chrysler Corp., 12.83 percent; American Motors, 1.36 percent; VWoA, 0.61 percent and Checker Motors, 0.09 percent.

Year-to-date, the makers have built 917,570 cars, down 32.77 percent from 1,364,821 at this time last year.

GM's Detroit plant was idle last week for inventory control.

Still down at GM are Janesville and Oklahoma City. Both plants have been idle since Jan. 18 for model changeover and are scheduled to return sometime next month.

Chrysler's St. Louis facility returned last week after being idle one week for inventory control. Also back last week from an inventory-adjustment shutdown was Ford's Atlanta point. The plant had been down since the first of this month.

Checker Motors' Kalamazoo point resumed operations last week. The plant was idle one week.

Ford's St. Louis plant worked overtime last Saturday (March 20).

Court orders dealer to pay service customer $500,000

WASHINGTON. — In what is believed to be one of the largest judgments ever filed in a case involving an auto dealer, Palmer Ford, of Hyattsville, Md., has been ordered to pay $500,000 to a customer for "malicious prosecution" after a dispute over a repair bill.

The order, handed down by a Prince Georges County Circuit Court jury in Maryland, followed an earlier dismissal of the suit by the same court.

A spokesman for Palmer Ford said the dealership has filed an appeal of the $500,000 judgment.

The complex case began in 1977 when Franklin Wood took his 1970 Mustang to the dealership for repairs. He received an estimate of $400 but was presented a bill for $952 when he came to pick up the car. Unable to pay, he left the car and returned home.

Later that night, Wood said, he received an anonymous phone call from someone claiming he was a Palmer Ford employe, telling him that very little more than $400 worth of work had been done on his car and that if he dropped off $400 in the men's room of the dealership he would find a receipt marked "paid"—along with the car keys.

The 20-year-old Wood did that and drove off with his car. Later, however, he noticed the radiator leaking and took the car back to the dealership where the service manager tried to discourage him from leaving the car. Wood insisted, and he left.

• The dealer's treasurer wanted to know how he had managed to pick up his car without paying his repair bill. When Wood told him, the treasurer said the service manager had quit and that Wood would have to pay the full amount if he wanted his car back.

Wood paid the full bill after borrowing money from his mother. But only days after doing so, he was arrested on embezzlement charges involving the repair incident.

When Wood called to ask the treasurer why this had been done, the treasurer replied that the president of Palmer Ford had a strict policy of prosecuting all people who dealt fraudulently with the company, and that it was out of his hands.

When the case came up in court, all charges against Wood were dismissed. Wood sued for "malicious prosecution."

The Prince Georges County Circuit Court dismissed the suit but Wood appealed to the Maryland Court of Special Appeals which ruled he was entitled to a jury trial. The jury took less than one hour to decide in his favor.

Washington office

WASHINGTON. — General Warranty Corp. has opened an office at 1750 Pennsylvania Ave., N.W.

Overtime boosts truck output to 45,209 for week

Overtime at General Motors' St. Louis point and Chrysler Corp.'s Warren plant helped boost last week's domestic truck production despite a partial shutdown at International Harvester's Ft. Wayne and Springfield facilities.

Last week, the makers scheduled 45,209 units, up 9.72 percent from 41,203 the previous week and up 14.04 percent from 39,643 the comparable 1981 week.

Year-to-date, the manufacturers have completed 392,968 trucks, up 2.18 percent from 384,578 at this time last year.

Last week, GM's St. Louis plant and Chrysler's Warren point both worked Saturday. Chrysler Warren also operated daily 9-hour shifts last week.

International Harvester idled one line at both the Ft. Wayne and Springfield facilities last week. The partial shutdown was to do heavy inventories.

Volkswagen of America's Westmoreland facility will be idle one week starting today (March 22) due to poor sales.

Car output rises 28 pct. in Canada; 22,485 for week

The return of General Motors' Oshawa (No. One) car assembly point helped boost last week's Canadian auto production 28.79 percent from the previous week's total. Output was also up from the comparable 1981 period.

The auto makers planned 22,485 units last week, a gain from 17,541 the previous week, and up 4.95 percent from 21,425 in the year-ago week.

The truck manufacturers held steady last week, targeting output at 11,434 units compared with 11,401 the previous week, but the total fell 4.13 percent from 11,927 in the same 1981 week.

So far this year, the auto makers have assembled 165,567 cars, up 6.42 percent from 155,582 in last year's comparable period.

Year-to-date, the truck manufacturers have completed 98,804 units, a 20.28 percent decline from 123,942 in the corresponding 1981 period.

GM's Oshawa (No. One) car facility returned March 15 after being idle one week to adjust inventory.

GM's Ste. Therese point continued on one-shift operations last week. The second shift has been idle since Feb. 4.

Also at GM, the Oshawa (No. Two) facility will be down one week starting today (March 22) to adjust inventory.

12 to go

A super shooter from Sbarro

Sbarro, the "car magician" from Grandson, Switzerland, has launched a new zinger, the Sbarro Super Twelve. It is a small 2+2 of about Rabbit size, and it is powered by "the only in-line 12 in the world." In fact, there are two transversely mounted, air-cooled, Kawasaki six-cylinder motorcycle engines of 1.2 liters each. Combined output is 240 horsepower.

46 added since last fall; total is highest in 7 years

Model count rises to 307

By John K. Teahen Jr.
Managing Editor

It took a while, but it appears that the domestic manufacturers have finally finished introducing their 1982 cars.

It's been a long season. It started last September, and it wound up this month.

The latest AUTOMOTIVE NEWS tabulation finds the domestic makers now have announced and priced 307 models, compared with 278 at the end of the 1981 season. It is the highest total since 325 in 1975.

Last fall, at the traditional introduction time, the U. S. firms announced 261 models, so there have been 46 additions in the ensuing months.

General Motors has been responsible for most of the late bloomers. GM had 99 models last fall, and it has 137 today, a gain of 38. In other words, more than one-fourth of GM's current fleet missed the regular starting time.

Since the first of the year, GM has announced and priced eight of its 32 lines of cars. Camaro and Firebird arrived in January, and so did the front-wheel-drive A-cars — Chevrolet Celebrity, Pontiac 6000, Buick Century and Oldsmobile Cutlass Ciera.

Official intro date for the Buick and Oldsmobile J-cars (Skyhawk and Firenza) was March 4, although they were included in customer rebates that GM announced Jan. 29.

• GM also has put forth stripped versions of the Chevrolet Citation and the Chevrolet and Pontiac J-cars (Cavalier and J2000).

The final GM newcomer is definitely not a stripped model. It's the $23,994 Buick Riviera convertible, which is expected to be in the showrooms in mid-April.

Convertibles also figured in the additions at Chrysler Corp. There are two of them for Chrysler LeBaron and one for Dodge 400.

Chrysler also has beefed up its lineup with a Town & Country wagon for LeBaron and a pair of Dodge 400 four-door sedans for a total of six new offerings since last fall.

Ford Motor's adidtions have been modest — base four-door hatchbacks in the Ford Escort and Mercury Lynx families.

American Motors and Volkswagen of America haven't added any choices since the '82 season began. AMC, in fact, has halted production of five models, but they're counted in this tabulation because they are still on sale.

The return of the convertible is perhaps the most interesting development of this "second season" in the domestic industry. The major U. S. firms hadn't offered a ragtop since the 1976 Cadillac Eldorado.

The '82 convertibles are co-op ventures. Cars and Concepts does the conversion for Chrysler, and American Sunroof does it for Buick.

There's another convertible in the wings. Ford is planning a Mustang softtop. It may appear this summer, and it may be called an '82 model.

• The current total of 307 models consists of 137 for GM, 93 for Ford Motor, 48 for Chrysler Corp., 23 for AMC and 6 for VWoA. The VWoA figure includes only U. S.-built Rabbits.

Table on Page 34.

At the end of the '81 model year, the totals were 127 for GM, 74 for Ford, 48 for Chrysler, 23 for AMC and 6 for VWoA.

At present, there are 113 four-door sedans, 150 two-doors, 40 four-door wagons and 4 convertibles.

Dividing the 307 selections into market classes shows that subcompacts are most numerous with 90 choices. There are 74 compacts, 74 intermediates, 40 standard-size cars and 29 luxury cars.

Ford has the most models with 41, followed by Mercury, 39; Chevrolet, 34; Buick, 33; Pontiac, 31, and Oldsmobile, 30.

Totals for the other domestics are AMC, 23; Dodge, 22; Plymouth, 15; Lincoln, 13; Chrysler,

House group approves easing of vehicle emission standards

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — A House subcommittee voted last week to approve an industry and Reagan Administration - backed revision of the landmark Clean Air Act.

It would roll back auto-emission standards to 1980 levels, delay and ease new truck emission standards, lessen emission equipment warranties, and make it more difficult for EPA to force the recall of polluting cars.

The auto industry has said the rollbacks could let makers cut the price of the average automobile on the order of $100 but the real savings lie in how the whole of the measure makes the building, certifying and tuning of the average car or truck easier.

The subcommittee vote was not unexpected nor was the margin, 12 to 8. Sponsors Thomas Luken, Ohio Democrat, John Dingell, Michigan Democrat, and James Broyhill, North Carolina Republican, held together a coalition that proved to be unbeatable as the committee drafted the legislation over the course of several months.

Without exception, they beat back, by consistent 3-to-4-vote margins, attempts by Health and Environmental Subcommittee Chairman Henry Waxman, California Democrat, and his allies to toughen the industry-backed bill. The Reagan Administration had labeled, the latter a reasonable approach to the betterment of industry and the environment.

• Last week was no exception, as with monotonous regularity they beat back amendments that would: Cut the measure's lead-time requirements for new-truck standards; demand that CO and NOx auto standards be eased to 7.0 grams per mile and 2.0 grams per mile, respectively; substitute a two-year delay of the 1981 standards in return for passing savings on to customers; extend the 1985 diesel requirements for NOx and particulate emissions to 1986; limit

29-month concessions package sent to rank and file for vote

UAW Council approves GM pact

By Marjorie Sorge
Labor Editor

CHICAGO. — The UAW/General Motors Council last week approved a new 29-month contract with GM that gives the workers a share in company profits, a prepaid legal services plan and ties absenteeism into the workers' wallets.

The 300-member council recommended the contract be submitted to the rank and file for approval. That voting process normally takes about 10 days.

The tentative UAW-GM agreement was reached March 21 after 37 hours of non-stop bargaining and is almost a carbon copy of the Ford contract which went into effect March 1. There are some differences in the profit-sharing plan, cost-of-living adjustments (COLA) and plant closings.

The new 29-month agreement covers some 340,000 active UAW workers and 150,000 laid-off employes. It replaces the current pact which would have expired Sept. 14, 1982.

"We've succeeded in achieving a series of breakthroughs on job security that will stop the hemorrhaging of GM workers' jobs," said UAW President Douglas A. Fraser.

Alfred S. Warren, GM industrial relations vice president, said the company is "very pleased" with the new pact and said it "responds to the new industrial revolution taking place in today's automobile industry."

While it is estimated that the new contract could save GM between $2.5 billion and $3 billion before it expires Sept. 14, 1984, none of the savings will be directly passed on to the consumer in the form of lower car and truck prices.

That plan had been part of the UAW-GM talks which fell

Riv ragtop: $23,994

DETROIT. — The Buick Riviera convertible will carry a sticker price of $23,994 when it goes on sale in mid-April. Buick's latest count showed 1,400 orders for the car for a retail value of $33.6 million.

More incentives

DETROIT.—More rebates from Ford Motor and Chrysler Corp. and an interest subvention program from General Motors are reported to be in the works for April. Current Big Three rebates end this month. The companies are generally disappointed by the low annualized car sales rate for March, in view of their widespread rebates and promotional activities.

Volvo to hike ad budget for launch of 760

By Kathleen Hamilton
News Editor

MONTE CARLO, Monaco. — Volvo will launch its new flagship, the 760 GLE, in the U. S. this November with an extra $2 million added to its usual ad budget of some $12 million.

Bjorn Ahlstrom, president of Volvo North America, said at a new-model preview here that the new 760 GLE is expected to comprise about the same portion of Volvo's model mix here as the current GLE takes.

Last year, Volvo sold 3,765 GLEs, or nearly 6 percent of its total U. S. sales of 64,477 autos. Only a handful of the new model will appear in calendar 1982. Ahlstrom said the firm hopes to introduce the all-new car at a price below $20,000.

Volvo is projecting annual increases in U. S. sales to average 10 percent for the near future. Ahlstrom's projection for 1982 sales in the U. S. is 68,000 to 70,000 cars and a "modest" increase the following year, when production of the 760 GLE will be in full swing.

The firm expects to maintain a U. S. dealer network of 400 to 425 dealers, Ahlstrom said. New points will be added chiefly when service needs dictate them.

The launch of the 760 GLE marks the first time Volvo is offering a turbocharged diesel engine. Ahlstrom said diesels now account for about 10 percent of Volvo's U. S. sales.

The percentage of diesels is expected to climb slowly in the next seven years. Right now, Volvo expects diesels will comprise 30 percent of its engine mix in the mid-1980s, but that figure may have to be scaled down depending on the energy market, Ahlstrom said.

Skeddle to head division of L-O-F

TOLEDO. — Ronald W. Skeddle, 40, has been appointed president of the L-O-F Glass Division of Libbey-Owens-Ford Co.

Group executives reporting to Skeddle include the president of L-O-F Automotive Glass and the vice presidents of glass operations, the Construction, Industrial and Distribution Group, administration and the research & development and support activities.

Skeddle had been with PPG Industries since 1965.

Japan works to dull U.S. protection fervor

By Miles Moore
Washington Staff Writer

WASHINGTON. — Japan will work "with a sense of urgency" to open domestic markets to foreign goods, Japanese Foreign Minister Yoshio Sakurauchi promised at a press conference here.

Sakurauchi, visiting Washington to meet with various cabinet and Congressional leaders, did not say what Japan would do or when it would do it, but said his country's new policies would be taken "on a step-by-step basis."

Japan is remaking its policies to ward off the growing protectionist fervor in the U. S. and Western Europe. Senator John Glenn, Ohio Democrat, meeting with Sakurauchi as part of the Senate Foreign Relations Committee, told him Japan must open its markets to U. S. cigarettes, computers, paper and other products if it wished to avert restrictive tariff legislation in Congress.

According to the New York Times, Japanese Foreign Ministry official Taizo Watanabe said at the conference that Japan would agree to Reagan Administration requests to keep auto exports to the U. S. at the 1.68-million level.

Although a precise export level had not been announced, Watanabe said, it would be "fair to assume" that the quota for the next fiscal year, beginning April 1, would not exceed that of the fiscal year now ending.

When Foreign Minister Sakurauchi was asked specifically about auto exports at the conference, he said that "nothing concrete" had been determined.

Watanabe, however, reportedly had a private session with the New York Times reporter.

U. S. Special Trade Representative William Brock has been urging Japan to consider the 1.68-million level "an absolute ceiling" for the coming fiscal year.

Besides Glenn and Brock, Sakurauchi also met with President Reagan, Secretary of State Alexander Haig, Commerce Secretary Malcolm Baldrige and Agriculture Secretary John R. Block.

In a meeting at the White House, President Reagan reportedly told Sakurauchi that the international free market system would be very favorably affected if Japan instituted new trade policies by June, when a seven-nation economic summit meeting is scheduled in Versailles.

Sakurauchi, according to the Washington Post, made no commitments but said Japan would do its best.

"We will continue to work steadfastly to this end, no matter how painful the process may be," he said.

Warranty data added to computer files

Ford expands CARES program

By Francis J. Gawronski
Service Editor

DEARBORN.—In a move calculated to improve customer relations, Ford Motor Co. has expanded its Computer Assisted Recall System (CARES) to take "a little more of the hassle" out of relations between its dealers and service customers.

Called CARES II, the system has been expanded by Ford Parts and Service Division (FPSD) to provide dealers, in addition to recall status information, the warranty start date and other information about Ford's Extended Service Plan (ESP) coverage on Ford vehicles.

Effective today (March 29), Ford and Lincoln-Mercury dealership personnel will be able to phone a toll-free number using the terminal for the division's DOES parts ordering system, a touch-tone telephone, or a touch-tone converted dial phone and, by entering a vehicle identification number, receive a voice response from a master computer headquartered in Dearborn.

Henry A. Zanardelli, divisional system manager for FPSD, said the computer verbally responds almost instantly with information identifying recalls not completed, warranty start date, special warranty limitation and extension messages, other service coverage messages for the VIN that has been entered in the computer and ESP data-type of contract, contract termination and date and mileage.

Under the initial CARES program, information was limited to recalls outstanding on the vehicle.

CARES II is available to dealers Monday through Friday, from 6 a.m. to 9 p.m. Eastern time, Zanardelli said. The system is provided to dealers at no charge.

• The overall CARES and CARES II systems include data for warranties on the previous seven-model years, and safety and emission recalls since the 1968 model year on all Ford-built vehicles sold in the U. S. market. ESP information relates to contracts in force and on file.

"We have computerized records on more than 30 million vehicles," Zanardelli said. "We have been averaging about 8,000 CARES inquiries daily, based on 1,200 to 2,000 telephone calls and questions on four to six vehicles per call.

C. V. Barion, FPSD general manager, said the system will be of great assistance to both dealers and owners, especially owners visiting a dealership for the first time or those who are unaware of the recall and warranty status of their vehicles because of lost records.

"We got into this at the request of our dealers," Barion said. "At one time it was relatively simple to check out eligibility with the old six-month warranty. However, with the proliferation of warranties and their terms and coverage, it became an almost impossible task to determine the status of each one.

"Sometimes a customer would know his warranty was in force but the dealer wasn't too sure," Barion said. "This computerized system should take all the confusion out of the customer-dealer relationship. It should go a long way to improve dealership service satisfaction and customer relations."

The system, according to Barion, also can be used by the sales department to check the status of vehicles prior to delivery to customers, especially units that have been in stock for some time.

"The dealer may be able to prevent a problem before it has a chance to develop," he said. "He also could save the customer the inconvenience of having to return the car for the recall service."

Barion noted that CARES II also can be used by the used-car department to check out tradeins and used-car stock for outstanding recalls and ESP contract plans not transferred to the new owner.

"That is what the bottom line is all about," Barion said. "Providing better service to customers faster and without hassle."

Savings-leasing combo offered by N.Y. bank

By John A. Russell
New York Staff Writer

NEW YORK. — A deposit-auto lease program which will enable bank customers to purchase high-interest certificates of deposit and pay for the auto lease through accrued interest on the account was announced last week by the Dry Dock Savings Bank here.

Under this plan, the depositor takes out the certificate of deposit and authorizes the bank to use the interest to pay the cost of a 36-month closed-end car lease. The leasing arrangements have been made between the bank and Genway Corp.

After three years, the depositor will get the entire deposit back plus all interest earned over and above the lease payments.

The leasing is restricted to American-built cars and the deposits advertised by the bank last week require a minimum $17,500 deposit to lease a Chevrolet Chevette or Pontiac T-1000; $24,500 for a Buick Regal, Oldsmobile Cutlass or Pontiac Gran Prix; $25,500 for a Chevrolet Caprice, Oldsmobile Delta Royale or Buick Le Sabre; $31,900 for a Buick Electra, or Oldsmobile 98 Regency; $39,500 for a Cadillac Coupe De Ville, and $53,500 for a Cadillac Seville.

John F. Mullady, vice president of the bank in charge of the program, said the bank pays the highest interest allowable under the law under this program, which is currently 14.10 percent.

The deposit itself will run between 36 and 39 months, de-

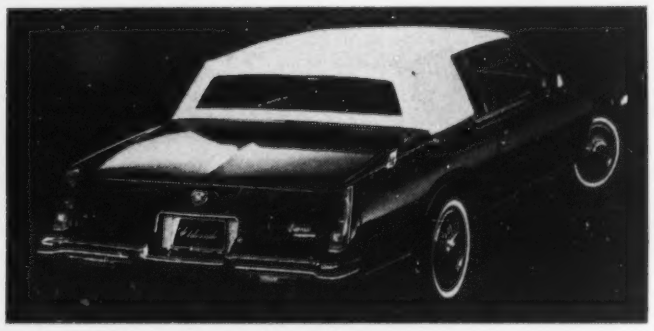
Bitter goes topless with 4WD

Bitter-Automobile of Schwelm, West Germany, has put a convertible version of the Bitter SC into production. The car is based on the Opel Monza. Four-wheel-drive is available, using the British Ferguson system. It brings the price to about $50,000.

Spring Special for Reliant

Priced at $250 on the Plymouth Reliant coupe, the Spring Special package consists of a trunk-mounted luggage rack and a choice of three two-tone exterior color combinations with matching stripes and coordinated interiors. Colors are daystar blue upper body with pearl white lower with blue stripe and blue interior; natural suede tan with caramel stripe and cashmere interior, and charcoal gray and burnished silver with red stripe and either red or silver interior.



Cabriolet roofs for Cadillacs

A convertible look for less than a convertible price is provided by the new full cabriolet roof options for the Cadillac Eldorado coupe (above) and the Seville four-door sedan. Priced at $995 on both models, the cabriolet roof is offered in black, white and dark blue.

puted duties on vehicles imported from 1971 through 1974 model years. VWoA denied any wrongdoing.

GM plans joint venture in robotics

DETROIT.—General Motors and Fujitsu Fanuc, Ltd., of Japan, have agreed to form a U. S.-based joint venture to design, manufacture and market robotic systems. The new company will be headquartered in the Detroit area. Initially, robots will be manufactured in Fujitsu Fanuc's plant in Japan, except for a GM-developed numerically controlled painter system which will be assembled in the U. S.

Fours holding up well, fleet owners say

NORTHBROOK, Ill.—Four-cylinder vehicles are as durable as cars with larger engines, according to a survey by Runzheimer & Co. The survey found that 73 percent of business car fleets report no more mechanical problems with four-cylinder cars than with sixes and V-8s. In fact, Runzheimer Reports on Transportation reported, 82 percent of the fleets surveyed said they plan to purchase more fours when replacing sixes and V-8s.

Smith promises to sacrifice, too

CHICAGO.—In response to a UAW request, General Motors Chairman Roger B. Smith has sent a separate letter to the union, promising he will make sacrifices under the "equality of sacrifice" principle stated in the GM concession package. Another letter, from GM Vice President Al Warren, promised all other salaried workers will make sacrifices equal to those of UAW members.

But total plunges 44 pct. below last year

10-day car sales are highest of '82

By Jenny L. King
Staff Writer

Domestic new-car sales in mid-March of 1981 were a tough act to follow. A year ago, generous rebates and incentive programs were in full swing, boosting sales for Chrysler Corp. and General Motors and culminating in a record total for the period.

This year, the combined efforts of the five major auto makers, even aided again by rebates on retail sales, fell far short of that magnificence. But in the context of sales thus far in 1982, they showed a continuing slow growth, notching the best 10-day total and second best daily selling rate for a period.

March 11-20 sales this year were 182,639, down a crashing 43.99 percent from the period record of 326,093 last year. With nine selling days both years, the 1982 rate of 20,293 was down 43.99 percent from 36,233, but was second best for 1982, following the 24,579 average of the final February period.

Year-to-date sales totaled 1,164,251, down 24.58 percent from 1,543,749.

Sales of all five auto makers were down in mid-March. It was more of a contest to determine which was off the least instead of calculating which made the greatest gain. In that vein, Ford Motor Co. was on top, with a drop of 29.65 percent, to 43,015 from 61,140 last year.

Chrysler Corp. sales were down 34.85 percent, to 21,252 from 32,618 in 1981. GM plunged 48.65 percent, to 112,700 from a record 219,467. It was GM's highest 10-day total so far this year. That also was true for Ford Motor Co.

Volkswagen of America dropped 46.50 percent, to 2,872 from 5,368. Estimated sales of American Motors passenger cars were 2,800, down 62.67 percent from the year-ago estimate of 7,500.

GM slipped back to 61.71 percent of the market from 67.30 percent in mid-March last year. Ford picked up the slack, climbing to 23.55 percent from 18.75 percent. Chrysler edged up to 11.64 percent from 10.00 percent. VWoA earned 1.57 percent compared with 1.65 percent a year earlier, and AMC had 1.53 percent, down from 2.30 percent.

Chrysler and Cadillac were the only U. S. makes to post gains in mid-March. Cadillac was up 6.60 percent, to 6,493 from 6,091 last year, while Chrysler sales of 4,280 were up 6.39 percent from 4,023.

The bad news for the remaining makes was as follows: Plymouth, down 44.30 percent; Imperial, down 65.40 percent, and Dodge, down 36.12 percent.

Ford was down 31.81 percent, Mercury was down 21.98 percent and Lincoln dropped 32.69 percent.

Buick was down 38.52 percent, Chevrolet was down 61.09 percent, Oldsmobile dropped 40.37 percent and Pontiac was down 45.67 percent.

Continued from Page 1

10; Cadillac, 9; Volkswagen, 6, and Imperial, 1.

There currently are 67 nameplates in the domestic field. Chevrolet, with nine, has the most lines, and Chevrolet is the only make that has a nameplate in each of the five market classes.

The Automotive News model tabulation includes all models the major domestic manufacturers are pricing and merchandising individually. It does not include engine options. For example, an Oldsmobile Delta 88 four-door sedan is one model, even though it is available with a V-6 gas, a V-8 gas or a V-8 diesel engine.

NHTSA boss Peck ridiculed at hostile House hearing

WASHINGTON.--NHTSA Administrator Raymond Peck last week joined the growing list of Reagan Administration agency heads getting a going over from Democratic-controlled House committees for allegedly not enforcing the laws they are directed to.

Doing the lambasting this time was Rep. Tim Wirth, Colorado Democrat and chairman of the Telecommunications, Consumer Protection and Finance Subcommittee. He accused Peck of "taking NHTSA back to the safety mentality of the 1950s and 1960s."

Wirth said that instead of implementing proven safety technologies like automatic crash protection and bumper standards, cracking down on odometer fraud and publishing understandable automobile ratings, Peck has instituted "a seat belt publicity campaign that — by all scientific analyses—will produce only marginal benefits at tremendous taxpayer expense, and a guide on how to pray for auto safety on 'Safety Sabbath'."

He ridiculed Peck's proposal to "put messages in fortune cookies encouraging people to wear safety belts," and he slapped what he called "the elimination of the automatic crash protection standard; a retreat from the auto rating program, and a phase-out of the research safety vehicle program, in favor of supposed voluntary efforts."

Peck said Wirth was misrepresenting the situation. He said that in writing the highway safety legislation Congress also required him to develop regulations that are reasonable, appropriate and lead to highway safety. "I have done that," Peck said.

But Wirth was not to be swayed, ridiculing NHTSA actions thus far as nothing more than mind control stuff.

"I hear what you're not doing," Wirth said. "Now I'd like to know, what you have done, one, two, three, four, five?"

Bristling, Peck tried to answer, arguing that the speedier turn-around procedures he had instituted to handle defect petitions would help a great deal in finding defects faster, that his Auto Safety Hotline would be more efficient, comprehensive and cheaper than publishing the controversial Car Book, and that his seat belt campaign would save more lives than automatic protection. But this was not to be his day.

Only Rep. James Collins, Texas Republican, defended Peck. "This industry is really hurting, and the last thing they need are more headaches out of Washington," Collins said.

AMC makes name official: New car is called Alliance

SOUTHFIELD, Mich.—American Motors has officially announced that Renault Alliance will be the name of a family of French-designed cars to be built in Kenosha, beginning this summer (Automotive News, Dec. 7, 1981).

The Alliance, scheduled for introduction in the U. S. as a 1983 model, is the American version of the Renault 9.

"Alliance combines the best of European car heritage and the high technology of Renault with American know-how in manufacturing, service and sales," said Joe Cappy, marketing group vice president for AMC.

"As a European car built in America, Alliance is the perfect name for the first offspring of our affiliation with Renault—a leader in the automotive world. The real benefits of the working 'alliance' between Renault and American Motors will soon be realized by consumers here."

The Renault Alliance, previously code named the "X-42," will begin rolling off the assembly lines at Kenosha in June and will go on sale in September at more than 1,300 Renault and American Motors dealerships.

Recipients of the 1981 AMC annual report can get the first view of the new front-wheel-drive Renault Alliance.

To do it they have to piece together a puzzle. The Alliance puzzle is made up of a series of paper squares. When cut out and properly reassembled, the squares present a view of the new car.

The Alliance also is featured on the annual report cover.

Renault's sporty Fuego, which entered the U. S. market this month after gaining widespread popularity in Europe, also is featured in the annual report.

No agency switch due, Lund says

GM goes shopping for advertising ideas

By Joseph Bohn
Marketing Editor

Robert D. Lund, General Motors vice president in charge of the Sales and Marketing staff, is shopping for ideas and said he plans some changes.

But he left observers to fill in the blanks on what he has in mind.

Speculation centers on GM's need, or desire, to improve its corporate advertising efforts, which have been termed "confusing" by ad sources.

Yet, Lund, named to his corporate position Feb. 1 after eight years as head of Chevrolet, emphatically denied he had a possible agency switch in mind when he asked all of General Motors' agencies to submit ideas to him.

D'Arcy-MacManus & Masius has been GM's corporate ad agency since 1965, while N. W. Ayer, which opened a Detroit office last year, handles a variety of corporate public relations ads.

Like other agencies contacted, D'Arcy declined to comment on the significance of Lund's request for ideas.

"I'm the new kid on the block, and I'm just looking for ideas," Lund said. "It's really something we do all the time," he added, downplaying the significance of his action.

He labeled published speculation about an agency switch as "misinterpretation" and involving suppositions that "have no basis in fact. I want to scotch it," he said.

Yet, he admitted some changes are in the offing.

• Some observers feel that GM's corporate campaigns have been disjointed and its policies confusing.

The last corporate effort was a four-page ad on technology, robotics and quality which was given high marks. Consumer perception of domestic car quality is considered one of the industry's major problems.

But the ad, which had more information than the average consumer could absorb at one sitting, was a one-shot effort.

"They ran it quick (in news weeklies and car buff books) like putting out a brushfire, instead of treating the subject like the time bomb that it is," said one observer.

There's a feeling that GM needs a consistent and prolonged campaign to tell its quality story. Something similar to the long-running "Quality is Job #1" Ford campaign.

Observers don't fault D'Arcy which, they feel, may have had trouble selling GM on some of its ideas.

GM's corporate policy and spending is, in fact, difficult to pin down.

Corporate money is sometimes pumped back to divisions, when management felt divisions could do a better job, or a special divisional problem existed, during cleanup or sometimes during a rebate.

The corporate effort has varied widely.

Waiting in the wings, observers feel, is N. W. Ayer, which scored a big success with its "GM rated best" ad, the only one featured in the company's annual report.

"If you read between the lines, the top brass loved it; the field people loved it, and Ayer winds up being a star," said one observer.

The N. W. Ayer corporate public relations account does not represent a great deal of money in terms of billings, but "they really worked hard, and probably treated that with more care than it was worth from a dollar standpoint," added an observer.

"Ayer opened up a Detroit office with the idea of picking up some additional business. They have a lot of office space to fill. If they want more automotive business, it's going to have to come from GM," sources concluded.

Electronically checking electronics

Quality control technician uses a computer-controlled inspection device at GTE's metal stamping plant in York, Pa., to check a cross-section of 40-lead integrated circuit frames to insure that an accuracy factor of plus or minus 0.0005-inch or less is maintained.

GM to buy through competitive bids

Steel-buying plan chills industry

By Roger Rowand
Engineering Editor

DETROIT. — Smaller cars, a smaller market and smaller profits continue to add up to big potential changes in General Motors' purchasing activities.

The No. 1 auto maker has chilled the steel industry with word it plans to buy steel through competitive bids rather than by paying discounted published prices as it does now.

The company earlier said it plans to cut the number of all its suppliers—perhaps by half—over the next few years.

GM's steel purchasing program change looms at a particularly bad time for the steel industry. Some of its members are on a huge capital spending spree. Others are in deep financial trouble, as evidenced by McLouth Steel Corp., in bankruptcy court.

Added to that mix of conflict and pressure is the fact that worldwide automotive steel technology is changing faster today than it ever has.

Hard, costly research and development is needed precisely at a time when it is most difficult to pay for. Any rocking of the boat in terms of automotive steel buying may bring mal de mer in the nation's steel centers.

Detroit uses about 15 percent of the domestic steel produced, with GM taking a share of about half that.

New, high-performance, high-strength steels are being developed and are replacing heavier, well-established steels. They are competing hard with aluminum and engineering plastics.

The high-strength steels moving into the auto industry are ticklish materials for car builders to use. That is because they have such undesirable characteristics as melt-to-melt, and even coil-to-coil unpredictability in spring-back rate and metallurgical consistency.

A steel's producer today is selling no commodity. His products are not the routine cold-rolled mild steels of the past.

Coated steels are another material that point up the growing complexity and sophistication of the steel business today. As car buyers pay higher and higher prices, their demands for corrosion protection rise in volume. In Canada, rust protection has become the law.

There are 12 North American steel firms in the coated-metal trade. They sell 11 general types of coatings and no single company sells them all. The one with the most diverse offerings sells only eight while two others offer only two each.

GM said it has notified its steel suppliers the changes will enable it to better meet its needs in a period of smaller cars and lower sales. It said it is streamlining buying practices.

One official, however, tempered things a bit by labelling announced changes as being "in more of an educational and philosophical vein" than cut-in-stone policy concepts.

Chrysler Canada prepares to build 7-passenger van

WINDSOR.—Chrysler Canada has begun construction of a 150,000-square-foot addition to the Windsor Assembly Plant, in preparation for a late-1983 launch of the front-wheel-drive T-115 van-wagon.

The Windsor Assembly Plant is the last Chrysler plant in the U. S. or Canada still assembling rear-wheel-drive cars. It builds seven models, at a rate of 680 a day now, but maximum capacity is 940 a day.

It will continue to build the cars through the 1983 model year, probably shutting down in late June or early July, 1983, for an autumn launch of the vehicle, codenamed the S-truck.

Production capacity for the van-wagon will be 1,040 units a day, a Chrysler Canada spokesman said.

That translates to more than 200,000 units a year on two shifts. Chrysler expects the van will appeal to those who now purchase station wagons, full-size cars and conventional vans because of their seating capacity. It will be fitted with 2.5 and 2.6-liter engines.

The T-115 will be a seven-passenger van, small enough to fit in a standard family garage.

The changeover of the Windsor Assembly Plant will leave only the Pillette Road plant, in Windsor, assembling rear-wheel-drive Chrysler vehicles. It is expected to continue building vans through the '84 model year, when it will change its production to FWD cars.

Pillette Road is expected to build the L (Omni-Horizon) or K-cars and possibly the G-24—codenamed for the new small sports car still in the planning stages.

Meanwhile, Chrysler continues negotiations with the Canadian government in an attempt to reopen the mothballed engine plant in Windsor.

GM-UAW contract shifts burden away from management

Workers to bear absenteeism costs

By Marjorie Sorge
Labor Editor

Absenteeism is a major problem for the auto makers and now, with the new General Motors-UAW contract, it would be a major economic problem for workers who are chronically off the job.

The new agreement has provided an absenteeism deterrent tied directly to the wallets of the workers. Under the plan, workers' attendance records will be monitored for six months. Analysts say it could save GM $500 million over the 29-month contract.

If a worker misses 20 percent of the scheduled work he will be penalized 20 percent of his general benefits for the following six months. After the penalty period he will be re-evaluated and if the absenteeism rate declines below the 20 percent the fine is removed.

While 20 percent is the trigger, workers who miss more time than that will have their benefits cut accordingly. For example, a worker who misses 50 percent of his worktime will have his benefits cut 50 percent.

According to a UAW spokesman, the program is designed to hit the chronically absent workers but will not affect workers who are off for long periods because of a major illness or unforeseen circumstances.

While affected workers would not have their pay cut directly, benefit cuts because of chronic absenteeism could result in reduced profit-sharing payments, vacation pay, paid absence allowance days (current five a year) and cuts in paid days off. It could also reduce the workers' supplemental unemployment benefits and sickness and accident benefits.

A two-member committee, one company employe and one union worker, would decide the legitimacy of the absenteeism and any problems could be taken to a higher union/company level, according to a UAW spokesman.

Absenteeism due to alcoholism would be referred to that joint committee which would probably refer the worker to the committee on alcoholism. The GM-UAW contract states that alcoholism is a disease and should be treated as such.

• According to one company insider, the absenteeism program is a major step in UAW-GM cooperation.

GM's short-term unexcused absenteeism was 3.9 percent in 1981, down from 4.2 percent in 1980. Short-term absences are from one to five days.

The long-term absenteeism at GM was 7.4 percent in 1981, 8.1 percent in 1980 and 7.2 percent in 1979. Those are long-term disability problems but, according to GM insiders, they are often overplayed.

According to one source, a worker may ride an extended disability if he is in danger of layoff. That way, he can get the long term disability benefits and then collect SUB benefits when he exchanges the long-term disability for the layoff status.

The Ford Motor Co. contract negotiated in February does not have a specific absenteeism plan, but Peter J. Pestillo, Ford labor relations vice president, said there is a letter of understanding and a commitment from both Ford and the UAW to work on the problem. He said absenteeism is already down as much as 50 percent in some plants, which he attributes to the employe envolvement (EI) program.

Ford's AWOL rate was 4.3 percent in 1981, down from 4.8 percent in 1980.

While there is no direct absenteeism plan, several Ford locals have created their own program. At the Livonia (Mich.) transmission plant, there is a 12-member committee on absenteeism which orients new and returning workers on the attendance requirements.

According to Bill Grenham, Local 182 financial secretary, the union is hoping to reward workers with good attendance. While nothing is taken away economically, local work rules could reward the workers.

The Livonia plant made work-rule concessions to Ford last November to enable it to bid on the company's new automatic overdrive transaxle (AXOD).

There were similar programs introduced at the company's Rawsonville (Mich.) parts plant.

Chrysler Corp. has no specific absenteeism program but is working with the union voluntarily to reduce the rate. In 1981, its unexcused absenteeism rate was 5.6 percent, down from 6.0 percent in 1980.

American Motors does not have any absenteeism program but its rate was 5 percent in 1981, based on manufacturing operations only. AMC in the past five years has not given out its absenteeism rates.

Most insiders say much of the reduction in the absenteeism rates is because of the increasing seniority of the workforce as more layoffs continue. They said workers with low seniority often are less conscientious than those with a lot of time on the job.

BIG THREE ABSENTEEISM PERCENTAGES

	1971	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981
Chrysler	6.1	6.6	8.1	7.7	6.8	7.4	8.0	7.8	7.4	6.0	5.6
Ford	5.2	5.2	5.7	5.5	5.1	5.0	6.0	5.9	5.8	4.8	4.3
General Motors*	5.9	5.8	6.4	6.4	6.0	6.4	7.9	9.8	5.7	4.2	3.9
American Motors**											5.0

*General Motors absenteeism rates for 1977 and 1978 reflect paid personal holidays, five for the period. 1979 and 1980 are unexcused absences only.
**—AMC's figures are approximate and cover only the manufacturing operations.
Comparisons among the companies is not valid since each uses a different method of computing absenteeism.
Volkswagen of America would not release its absenteeism figures.

GM contract lets workers buy cars near dealer cost

By Marjorie Sorge
Labor Editor

Under the new labor contract, General Motors employes represented by the UAW will get discounts of 12 to 20 percent off the sticker prices of GM cars and trucks and discounts of 18 to 20 percent on optional equipment.

The plan is similar to the one for salaried employes under which the employe orders the vehicle through the company and takes delivery through a dealer. Dealer profit on such vehicles is not as great as it would be for a retail sale. No reimbursement for the dealer is expected from GM.

The discount schedule indicates that the blue-collar workers will be able to purchase their vehicles at close to dealer cost.

GM had no comment on the employe discount plan.

GM insiders say the company hopes the program will stimulate sales.

The discounts are:

1. 12 percent on the car and 18 percent on options on the Chevette Scooter and the stripped versions of the Chevrolet Citation and Cavalier and Pontiac J2000.

2. 15 percent on the vehicle and 18 percent on options on F-cars and all other T, X and J-cars. They are: Chevrolet Chevette, Cavalier, Camaro and Citation; Pontiac T1000, J2000, Firebird and Phoenix, Oldsmobile Firenza and Omega; Buick Skyhawk and Skylark, and Cadillac Cimarron. The same discounts apply to the Chevrolet and GMC S-trucks.

3. 19 percent on cars and options on Oldsmobile Toronado, Buick Riviera and Cadillac Eldorado and Seville.

4. 20 percent on cars and options on Chevrolet Corvette.

5. 18 percent on cars and options on all other cars and light trucks.

In the 1979 GM-UAW contract, hourly workers with one year's seniority and hourly retirees were eligible for rebates of $235 on subcompact, compact and intermediate models and $360 on standard-size and luxury cars and light trucks.

Retirees also are eligible for the new program.

Moore chosen

NORTH LITTLE ROCK, Ark. —Michael Moore, president of One Moore Ford, has been elected to the Ford Division National Dealer Council.

Grille shell

A grille shell, steel with chrome plating, designed to fit all General Motors A-body models is available from Moselle Coach Works, Inc., Canoga Park, Calif. Installation takes about five minutes, and prices begin at $345, based on quantity. Amber fog lights are included in the Concourse package.

Nose job for Volkswagen

Kamei is a leader among body accessory companies in Germany. With more and more customers of Volkswagen wanting to give their cars a different look, Kamei can oblige. Here a VW Golf (Rabbit) sports a Kamei front end.

DeLorean appears to be near a short-term cash solution

By Edward Lapham
Financial Editor

There was a ray of sunshine for the DeLorean sports car enterprise last week as the company appeared close to at least a short-term solution to its cash crunch.

Following lengthy negotiations with the Bank of America, which has a secured interest in 1,979 DeLorean vehicles as collateral for an $18 million loan on which DeLorean Motor Co. is in technical default, the company will be allowed to ship some of the cars to its dealers.

At presstime, DMC and Budget Rent-A-Car Corp. were still negotiating a sale-buyback arrangement. "It's not dead," a Budget spokesperson said.

Earlier in the week, John DeLorean and DMC vice president J. Bruce McWilliams held a dealer meeting, attended by about 70 dealers, to tell the dealer/investors the company's situation was improving.

At that time, the dealers were told the Budget deal was all but in place and that by Thursday (April 1) the company would be able to pay dealers for outstanding warranty and subsidized floorplan claims.

AUTOMOTIVE NEWS learned the Budget deal tentatively involves sale of 1,000 cars for about $13,500 per car, with an arrangement to sell back the cars to DMC in the autumn for $18,000 per car less $400 per month in depreciation.

The cars would then be sold by DMC to dealers "at residual value."

The arrangement tentatively stipulated the cars would be owned by Budget for no more than 12,000 miles. AUTOMOTIVE NEWS sources said Budget plans to rent the stainless steel sports cars for about $65 per day.

"John (DeLorean) told us that in the course of trying to save the company these last few weeks he has personally put about $1.8 million into the company," said one dealer who was at the meeting. "It was a very optimistic, positive meeting."

• Meanwhile, there was little change in the longer-term situation. AUTOMOTIVE NEWS learned that Hyundai Motor, division of the giant Korean Hyundai Group, had decided not to pursue negotiations with DMC following a lengthy internal feasibility study.

A joint venture and equity investment in DMC by Hyundai had been proposed to the two parties by a U. S. middle man.

In the UK, the DeLorean Belfast factory continued to produce at reduced levels while the receivers sought to find a buyer or investor.

Reports from London said the receivers held a meeting with representatives of the workers and told them only one potential investor was still considering purchase of the plant.

One source said the receivers are ready to "pull the plug" and liquidate the operation if a deal cannot be made soon.

Automatic slips; jury says Ford must pay $250,000

SEATTLE.—A jury here found Ford Motor Co. at fault for the injury to a 75-year-old man that resulted when his 1973 Ford van allegedly slipped from Park to Reverse and ran over him.

The jury, after three hours of deliberation, awarded the plaintiff, Melvin Lenhardt, $250,000 in damages.

The alleged Park to Reverse slippage accident is one of a number of such occurrences reported since the NHTSA reached an agreement with Ford late in 1980 whereby the company agreed to send dashboard warning notices to more than 10 million owners of Ford vehicles equipped with automatic transmissions in exchange for the government's agreement to forego a recall of the vehicles.

Ford has maintained throughout that no defect exists in its automatic transmissions and that the thousands of accidents and 154 fatalities attributed to alleged Park to Reverse slippage are the result of "operator error."

In response to the latest jury finding, Ford Vice President and General Counsel Henry R. Nolte Jr., said:

"We are disappointed with the jury decision. We are planning to file appropriate post-trial motions and, if necessary, appeal. Rulings by the court, we believe, were erroneous and prevented Ford from demonstrating to the jury that this accident could have been avoided if the plaintiff had latched his vehicle in Park or set the parking brake."

IH upgrades its premium conventionals

SAN FRANCISCO. — Improved exterior styling and upgraded driver-comfort features highlight advances International Harvester has incorporated into its line of Models 4200, 4300 and Eagle premium conventional trucks.

"The popularity of improvements such as these — already available in our CO-9670 series premium cabover trucks — spurred the change," said Neil A. Springer, vice president-general manager, North American Truck Operations. "Both series now offer consistent styling, ride and handling refinements."

He noted that the conventional models also are available with special "Fuel Fighter" options similar to those offered with the CO-9670.

These include Cummins Formula 300, 350 or NTC-400 engines, Fuller Roadranger transmissions, International RA-472 and RA-474 rear axles and Goodyear Unisteel II radial tires.

"An operator can save up to $12,000 per year in fuel costs by specifying these components," Springer said. "This is an example of International Trucks' commitment to our lowest-cost-of- ownership concept — im-

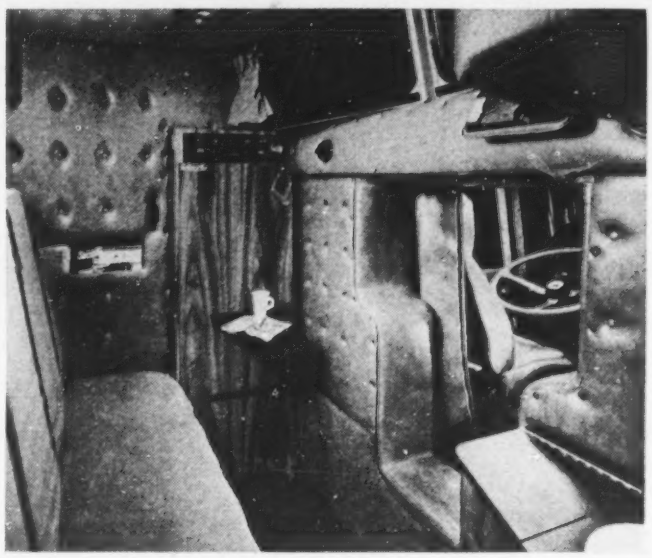
Cummins cuts price of Twin Turbo 475

COLUMBUS, Ind.—Under a major price reduction, Cummins Engine Co. said purchasers of new trucks powered by the Cummins 475-HP Twin Turbo 475 diesel will save several thousand dollars compared with the previous price.

The Twin Turbo 475, available in most makes of heavy trucks, features two turbochargers mounted in series to boost intake-manifold pressure to almost twice the level produced by a single turbo, the company said.



Sleeper's a little like home

Walk-in sleepers of the upgraded International Class 8 conventional have many of the comforts of a motor home, features such as upper and lower bunks, wash basin, refrigerator and sound system.

New system puts heat on diesel-fuel waxing

By Roger Rowand
Engineering Editor

About this time of the year, owners and operators begin to breathe a little easier about at least one facet of the trucking business. Their vehicles' diesel fuel will flow more easily and parafin plugged filters fade into memory for another 10 months or so.

The problem of paraffin wax —solidifying and clogging filters is real and growing. And, it's becoming more acute as the quality of diesel fuel being used around the world declines.

Raychem Corp., Menlo Park, Calif., says it has developed a system for preventing jellied fuel and parafin plugging. It does the job by warming up the fuel with a novel heat-conducting plastic core running through the fuel line.

The Raychem Thermoline system includes a self-regulating conductive heating strip that has the ability to adjust heat as fuel temperature changes.

The strip contains two conducting wires separated by carbon particles. Cold, the particles are close to each other and carry more electricity (and cause heat) than they do as they warm and spread out — simultaneous with less need for heat to the fuel.

• "Tests have indicated a truck winterized and equipped with a diesel fuel-line heater can be started quickly at temperatures as low as 40 degrees Fahrenheit," said David C. Woodward, marketing director, Raychem's Thermal Products Group. "The

Diesel-fuel woes eased

Raychem Corp. says its new Thermoline fuel-line heating system for diesel engines eliminates cold start and operating problems caused by waxed, jelled fuel, even in temperatures as low as minus 40 degrees.

Hayford resigns as IH president, no reason given

CHICAGO.—Warren J. Hayford resigned 11 days ago as president, chief operating officer and a director of financially troubled International Harvester. Neither Hayford nor the company gave any reason for his sudden departure.

Hayford joined Harvester almost three years ago, coming from the Continental Group where he was executive vice president.

In accepting the resignation "with regret," Archie R. McCardell, chairman, noted that Hayford's tenure "encompassed one of the most demanding periods in our history. During this time, (he) initiated many actions to place the company on the road to future financial health."

McCardell said he will serve as chairman and chief executive as well as president.

One analyst observed that Hayford's abrupt resignation could worsen Harvester's precarious financial position.

He said lenders might see Hayford's leaving as a signal that he feels the company will not survive, withdraw their support and force the firm into bankruptcy.

truck industry news

Light-truck surge slows decline

January registrations drop at a lower rate

Growing strength among light trucks, especially those in Groups 1 and 3, slowed the rate of decline in new-truck registrations in the U. S. dramatically in the first month of 1982.

In January, according to R. L. Polk & Co. statistics, 155,599 new trucks of all types were registered, down only 3.7 percent from the year-earlier 161,508. The count for the first month of 1981, on the other hand, was off 30.8 percent from the previous year's 233,277.

January registrations of new light trucks dropped only 1.6 percent from the 1981 count, with gains in both Groups 1 and 3 and a drastic reduction in the Group 2 rate of decline.

During the month, 142,779 light trucks were registered, compared with 145,073 in January, 1980.

Group 1 tallies were 2.7 percent higher than a year ago, with the non-captive imports providing the spark. The count was 77,818, compared with 75,805 in 1981. The non-captive import total was 22,437, a gain of 23.7 percent over the year-earlier 18,144 units.

• In Group 3, there were 1,299 registrations, eight units higher than the year-ago 1,291. The Group 2 count was off 6.3 percent, from 67,977 units in 1981 to 63,662. A year ago, however, the Group 2 total was down 40.5 percent from the previous year's 114,157 units.

Registrations of medium trucks continue to plunge, while the heavies' losses appear to be bottoming out.

In January, only 2,593 mediums were registered in the U. S., a decline of 45 percent from the year-earlier 4,715. The 1981 count was only 11.5 percent under the previous year's 5,327 units.

Group 6 tallies in January were down 44.8 percent, from

Continued on Page 24, Col. 3

Industry sales for two months rise 9.9 percent

Two-month retail sales of new trucks of all types by franchised dealers and factory outlets in the U. S. were up almost 10 percent over last year, with increases in two of the three market segments.

Through February, according to the Motor Vehicle Manufacturers Assn. and other independent sources, 386,014 trucks were retailed, an increase of 9.9 percent over last year's 351,401 units.

February sales were up over a year ago for the second consecutive month. The total of 207,832 units was 12.3 percent over the 184,822 vehicles retailed in the same month last year.

Slump slows in truck registrations

Continued from Page 14

4,603 units in 1981 to 2,539. Group 5 was off 53.6 percent to 52 units, compared with 112 a year ago. There were two Group 4 tallies this year and none in January, 1981.

Heavy-truck registrations in the first month totaled 10,227 units, a decline of 12.7 percent from the year-ago 11,720. The 1981 count, however, was 31.8 percent below the previous year's 17,180.

In January, 6,343 Group 8 heavies were tallied, down only 3.7 percent from the year-earlier 6,584 units. The Group 7 total dropped to 3,884 units during the month, a decline of 24.4 percent from the year-earlier 5,136.

• As it did in 1981, Chevrolet started the new year in the No. 1 spot with 50,295 truck registrations, more than 9,000 units higher than Ford's 41,016 units. It was the third straight month in which Chevrolet was the registrations leader.

Ford's share of total truck industry registrations in January dropped 6.13 percentage points. Its total for the month accounted for 26.36 percent of the total, compared with 32.49 percent last year on 52,479 tallies.

The biggest gains in penetration during the month were achieved by the miscellaneous group, with the non-captive imports leading the way, and Dodge, whose retail sales have risen substantially since the start of the 1982 model year.

In January, there were 22,962 tallies for the miscellaneous group, accounting for 14.76 percent of the total. A year ago, the group had 11.39 percent with 18,401 units. Its penetration increase was 3.37 points.

Dodge's share was up 2.87 points over the first month of 1981. In January, it accounted for 9.89 percent of the total with 15,391 tallies. A year ago, its 11,329 units were good for 7.02 percent.

International retained heavy-truck leadership in January, but its margin over No. 2 Ford was less than 200 units. International's penetration was down 3.63 points.

• There were 2,287 International registrations in January, good for 22.36 percent of the industry total. A year ago, International accounted for 25.99 percent of the count with 3,046 tallies.

GMC Truck & Coach scored the biggest advance in penetration during the month, while Chevrolet, which has been out of the Group 8 line-haul truck business since late in 1980, suffered the biggest loss.

GMC's share was up 6.18 points, while Chevrolet's was down 6.37 points. Among the Group 8 independents, Peterbilt's share was 2.79 points higher than a year ago, while Freightliner posted a gain of 1.68 points.

Truck-industry sales up 9.9 pct. for two months

Continued from Page 14

heavies were up in each of the first two months of the year, with the all-new domestic Big Three compacts the major contributor to the surge in light-truck volume.

Light-truck sales through February totaled 318,271 units, an increase of 15.5 percent over last year's 275,580. The February total of 172,259 sales was 18.4 percent higher than the 145,479 retailed in the second month of 1981.

• Dealers and factory outlets retailed 23,994 heavy trucks in the first two months, an increase of 2.6 percent over the year-ago 23,386 units, with gains in both weight groups.

In February, the total was 11,190 units, a decline of 1.3 percent from the year-earlier 11,343 units. The Group 7 count was 18.3 percent higher than a year ago, while the Group 8 total dropped 13.2 percent.

Sales of medium trucks were down in both February and the two-month period. The February total of 2,800 units was 49.2 percent lower than last year's 5,507. Through February, the count was 5,716, a decline of 53.7 percent from the year-ago 12,344 units.

Going into the final month of the first quarter, there were 519,705 new trucks of all types in retailers' stocks of unsold vehicles, a decrease of 10.4 percent from the year-earlier 579,842 units.

Inventories were down noticeably in the light and medium segments, while there was little change from a year ago in the supply of unsold heavies.

There were 462,752 light trucks on hand, down 9.7 percent from the year-earlier 512,525. Mediums were off 46.1 percent, from 21,981 in 1981 to 11,846. Heavies on March 1 totaled 45,107, compared with 45,336 units a year ago.

IN THIS CORNER, THE 1982 GRUMMAN OLSON TRUCKS.

Tougher, to go the distance. Lighter, to get you there for less. That's the Grumman Olson truck line for 1982.

And in the rough and tumble 1980s, with gas prices high and budgets tight, that's what the smart money looks for in a truck: lightness, toughness and endurance.

That's exactly the combination that Grumman Olson has championed in 30 years of making rugged aluminum truck bodies.

For 1982, we've put everything we've learned into making a truck body so tough it can outlast two, three, even four chassis. Close riveted construction. Aluminum extruded floors. Aluminum stepwells and rear bumpers. Strain hardened aluminum body panels that refuse to rust.

Kabmaster

Kurbette

Kargo King

The aluminum that makes our bodies tougher also gives them a 1,000-pound weight advantage over steel bodies of the same size. That saves on gas, tires, brakes, drive trains.

And when you carry 1,000 pounds less truck, you can carry a lot more cargo. Or buy a down-sized chassis and save on everything from gas to replacement parts.

Whatever business you're in, whatever size truck body you need, we can set you up with the perfect match.

So call the Grumman Olson representative nearest you today.

He'll show you how to make 1982 the year you start doing your roadwork with The Lightweight Champs.

For role in setting standards

SAE honors Hodges

DETROIT. — The SAE's highly regarded Arch T. Colwell Cooperative Engineering Medal has been awarded to Lawrence H. Hodges, of Racine, Wis., for his work in standards.

Hodges, a consultant, is a former vice president of J. I. Case Co.

In presenting the 1982 award, SAE President N. John Beck, noted the wide scope of Hodges' work.

"He has been instrumental in promoting SAE's standards on the local, national and international levels," Beck said. "His participation in the development of voluntary standards spans three decades."

Hodges has played an important role in representing U. S. interests in activities of the International Standards Organization in Geneva.

Milestone unit is a month behind last year

Makers build millionth car of 1982

By Patricia Hoffman
Staff Writer

Domestic auto production for the year-to-date reached one million last Friday (March 26), exactly one month behind the 1981 pace.

So far this year, the auto manufacturers have built 1,010,613 units, down 33.11 percent from 1,510,796 in the same time last year.

Last week's output was targeted at 89,993 cars, down 25.0 percent from 119,988 the previous week and down 38.51 percent from 146,351 in the comparable 1981 week.

Breakdown for the week by company is: General Motors, 61.60 percent; Ford Motor, 19.51 percent; Chrysler Corp., 16.67 percent; American Motors, 2.11 percent, and Checker Motors, 0.11 percent.

Volkswagen of America's Westmoreland plant was idle last week due to poor sales. Production is scheduled to resume today (March 29).

GM's Arlington, Baltimore, Framingham and Leeds facilities were all idle last week for inventory control.

GM's South Gate point was mothballed last Tuesday (March 23), ending production of the Cadillac Cimarron and Chevrolet Cavalier. Approximately 2,550 workers have been put on indefinite layoff. The plant had been scheduled to close April 2.

GM's Janesville facility, currently idle for model changeover, will pick up Cimarron production when the plant resumes sometime this spring. Other car lines to be assembled there have not been announced.

Also still down for changeover is GM's Oklahoma City point. The facility (also scheduled to resume sometime this spring) will produce the midsize Chevrolet Celebrity and Buick Century.

Ford's Dearborn, Kansas City and Lorain plants were all idle last week for inventory control.

Daily and Saturday overtime was scheduled last week at Ford's St. Louis plant.

Chrysler offers physicians incentive to cut their bills

By Marjorie Sorge
Labor Editor

DETROIT. — Chrysler Corp. is tired of taking its medicine in the high cost of medical insurance and has gone to the doctors for a cure.

The company is asking physicians in Southeastern Michigan to reduce their fees by 10 percent for one year beginning May 1 in exchange for a certificate worth $500 to $2,500 on the purchase or lease of a new 1982 Chrysler product ordered and delivered by Sept. 30, 1982. The cash allowance will come directly from Chrysler without any dealer participation.

Chrysler's U. S. health care bill was $300 million in 1981, or about $350 a car, according to Gerald Greenwald, vice chairman. In Michigan alone, the bill was $200 million on health-care premiums and another $47 million for doctor bills.

According to Greenwald, Chrysler could have saved $20 million in 1981 if the average hospital stay of Chrysler workers had been reduced by one day.

"We intend to discuss the subject of health care benefits in our coming union negotiations," Greenwald said. "However, there are limits to what we and the union can do to reduce health-care costs."

The current contract expires Sept. 14, 1982. In a total of three bargaining sessions, that pact gave Chrysler over $1 billion in concessions.

Chrysler estimates it will spend about $2,873 per active employe in 1982 and about $1,745 per retiree in the same period. There are about 165,000 active and inactive Chrysler workers and retirees.

Rebates to doctors are as follows:

1. $500 on Gran Fury and Diplomat.

2. $800 on Rampage, Horizon, Omni (excluding Miser models), TC3, 024, Sapporo, Challenger, Champ, Colt, Reliant, Aries (excluding two-door lowline models), import trucks, Ram Miser pickup, LeBaron, Dodge 400 (excluding convertibles), Town & Country Wagon, New Yorker.

3. $1,000 on Ram pickups (except Ram Miser), Ram van, Cordoba, Mirada, Voyager, and Ram wagon.

4. $2,000 on Imperial and Ramcharger.

Chrysler currently has a rebate program ranging from $300 to $2,000 which is scheduled to end March 31. This is expected to be extended with some modifications.

Letters to area dentists were scheduled to go out this week.

Truck production slips on downtime at VW and IH

Downtime at Volkswagen of America's Westmoreland facility and a partial shutdown at International Harvester's Ft. Wayne and Springfield assembly plants pulled last week's domestic truck production down from the previous week, but the total was above that of the comparable 1981 period.

Last week, the makers targeted output at 43,183 units, down 1.29 percent from 43,747 the previous week, but up 7.60 percent from 40,132 in the comparable 1981 week.

Year-to-date, the makers have finished 437,571 trucks, a 2.92 percent gain from 425,173 in the same period last year.

VWoA's Westmoreland facility was idle last week. Operations are scheduled to resume today (March 29).

Also down last week was one line at International Harvester's Ft. Wayne and Springfield assembly points. The partial shutdown was due to overstocked inventory.

General Motors' Pontiac plant increased production of GMC heavy-duty trucks last week. Production was upped from 12 units a day on one shift, to 20 units a day. About 60 workers were recalled from indefinite layoff.

Chrysler Corp.'s Warren facility worked a nine-hour shift six days last week.

Trucks steady, but car output dips in Canada

Downtime at General Motors' Oshawa (No. Two) point dragged last week's Canadian auto production down 15.36 percent from the previous week's total, but truck output reached the highest point so far this year as the makers completed the fifth consecutive week with operations at all facilities.

Last week, the auto makers scheduled 18,913 units, down from 22,345 the previous week, and down 5.59 percent from 20,033 in the comparable 1981 week.

So far this year, the car manufacturers have finished 184,340 units, a gain of 5.03 percent from 175,505 completed in the comparable period last year.

The truck makers targeted 11,878 units last week, almost even with 11,866 the previous week. It was the highest weekly schedule so far this year, but it was 3.67 percent below the 12,331 assembled in the comparable 1981 week.

Year-to-date, the makers have built 111,114 trucks, down 18.61 percent from 136,517 completed in the same period last year.

GM's Oshawa (No. Two) car facility was idle last week for inventory control.

Chrysler Corp.'s Windsor car plant worked Saturday (March 27) to keep up with the increased demand for rear-drive midsize cars. The plant also worked the preceding Saturday (March 20).

GM cuts interest to 12.8 pct. to succeed rebates

By Joseph Bohn
Marketing Editor

As anticipated, General Motors came back with a sweeping, new interest subvention program for April 1-May 31. It succeeds the rebates which ended March 31.

GM is offering 12.8 percent financing through GMAC from participating dealers. The program doesn't apply to fleet or lease deals. It is not applicable in Texas or Arkansas.

It covers all '81 and '82 cars and light-duty trucks. Medium and heavy-duty trucks and vehicles eligible for rebates under the "Let's Get Moving" program are excluded.

GM's promotion includes a record $10 million GMAC advertising campaign for the two months and strong ad support from individual divisions.

GM's program requires dealers to contribute 70 percent of their finance reserve. Customers stand to save an average of $825, based on figures for vehicles financed by GMAC during February, 1982, in all states except Texas and Arkansas.

In California, finance savings are estimated at a higher $1,125.

Because of the dealer contribution requirement, which is certain to have some dealers passing along costs to customers, the actual savings may end up being less than advertised.

GM's program is not offered in Arkansas because of a 10 percent interest rate ceiling in that state. In Texas, GM is still fighting a challenge to its previous dealer-contributed rebates and decided not to offer interest subvention until that question is cleared up in court.

"We're hoping to get it (interest subvention) into Texas soon," said a GMAC spokesman.

• GM had good success with a 13.8 percent interest program it first offered last year, but not with a follow-up 12.9 percent program.

Analysts said the follow-up program didn't come off because

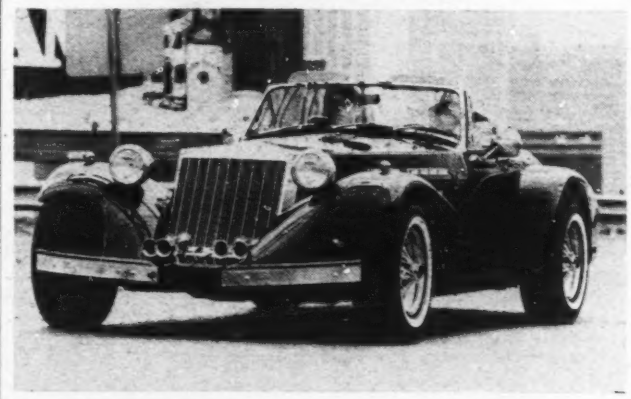
Welcome, Spring!



For a fortunate few

The Bradford Roadster, making its debut at the Dallas Auto Expo, provides transportation for two powered by a Ford-built 5.0-liter engine with four-speed automatic transmission plus overdrive. Bradford, of Ft. Lauderdale, Fla., has set production at six vehicles per month. Each 119-inch-wheelbase roadster has a stainless steel hand-pounded radiator grille shell, hand-spun stainless steel headlights, imported leather seats and trim and removable hardtop plus convertible top with headliner. The price tag reads $70,000.

Work begins in Senate to veto FTC's used-car rule

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — A Senate committee last week started the ball rolling again on action that U. S. car dealers hope will eventually rid them of a sword that has been hanging over their necks for nearly seven years, the FTC's proposed used-car rule.

By a vote of 13 to 4, the Senate Commerce Committee sent legislation to the Senate floor that would veto the requirement that car dealers inform used-car buyers, by way of a window sticker, what the warranty terms are on the vehicle and whether they know of any defects in the major systems of the vehicle.

Car dealers contend the known-defects disclosure requirement is tantamount to ordering an inspection of the vehicle and that it opens them up to unlimited legal action. This was never contemplated under the Magnuson-Moss Warranty Act, they say.

The FTC, in contrast, argues the used car rule does no such thing; that it requires dealers only to tell what they already know about the vehicle and that the legal action the dealers worry about is the same as that now available to used-car buyers.

Far from the $150 cost per vehicle for compliance estimated by the dealers, the FTC

As NADA convention opens

Truck leaders look for an upturn

By Jack Walsh
Truck Editor

After almost 2½ years of sagging big-truck sales in North America, industry leaders look for an upturn in the third or fourth quarters this year, and a marked improvement in 1983.

It will be some time before the industry can expect a return to 1979's record volume, most executives of truck-manufacturing and supplier firms conceded prior to the start of the 19th annual convention and exposition of NADA's American Truck Dealers Division last Saturday (April 3) in New Orleans.

Any significant turnaround in the short term, they indicated, hinges on greater progress in reducing unemployment — especially in the automotive and housing industries — and a reduction and stabilization of interest rates.

There are some signs for encouragement, but one has to look for them, said James T. Riley, general sales manager, GMC Truck & Coach Division. He cited continuing expansion of disposable income and the lowest level of personal installment debt since 1977.

He said the 1980s will be a decade of growth for medium and heavy trucks in the U. S. and throughout the world, and that GMC expects heavy-truck sales in the U. S. to exceed previous record levels by the mid-1980s.

• Arthur P. Ronan, president, Rockwell International's Heavy Vehicles Components Operations, anticipates some improvement beginning in July, but he thinks sales of medium and heavy trucks for calendar 1982 will be below 1981 levels.

On the other hand, James A. Capolongo, general manager, Ford Motor Co. Truck Operations, feels that if interest rates drop to 15 percent or less, 1982 sales of mediums and heavies will hit 230,000 units, "a modest 2 percent gain over 1931."

Robert W. Gillison, president, Eaton Corp.'s Truck Components Group, said that when the recession ends, things in the truck industry "will never be the same."

"We've reached a plateau and we're not likely to see that kind of explosive growth in heavy trucks that characterized most of the '60s and the '70s," he added.

"While I'm sure we'll see a return to '79 volumes some time in the '80s, I fear it will be later rather than sooner," he said.

breaking news

Ford of Canada rejects June talks with UAW

TORONTO.—Ford Motor Co. of Canada has rejected a UAW bid to begin contract talks in June instead of the traditional July. Ford last month asked the UAW to begin talks immediately, but the union rejected that request, indicating talks could begin one month earlier this summer. The company said beginning talks in June would not help its competitiveness or the union's job security needs. The contract expires Sept. 14.
